14939. Re: [ArizonaScanner.com] Frequency request/PFD Tac Channels

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2008-06-29 23:48:21 UTC
From: Ed (K9EDK)
Topic: 14916 Message: 14939

Chandler and Sun Lakes are currently being assigned to channel 8. Ahwatukee and south Phoenix is now channel 2. In the near future, channel 2 will become an "info" channel and will not be used for tactical operations. I would assume ch. 13 or 14 will pick up south Phoenix and some of the areas of Chandler that channel 8 is useless in. Blue deck 2, 3 and 12 are history. Our techs, in all their wisdom (or at least the ones making decisions) determined that repeaters aren't safe for fireground communications. I wonder if anyone told them that 700 MHz & 800 MHz trunked is a form of repeater...

Ed

On Sunday June 29th at 3:49 pm, 2 medical transport helicopters collided 1 mile east of Flagstaff Medical Center, dropping over the McMillan Mesa. At least 7 people died, and many others injured. The crash also caused a large forest fire in the area.

From: Steven Isoldi
Topic: 14916 Message: 14945

A thought is perhaps they'll use Blue 1,2,12 as simplex?

Conceivably, 3 of the old Bluedecks spots where Phx PD used to be
could be used utilizing the input freqs from B1,2,12.

Thoughts?

Didn't PFD do some testing and put out a report that found 700/800 simplex penetrated buildings better than VHF for fireground? Also, I've read a thread a while back in radioreference that said they were testing some type of simplex to trunked system patching system. (Might have been tied in with the simplex testing info.) Wonder if we'll be seeing something in those frequencies coming up sometime in the future.

14948. Question

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2008-07-01 23:14:53 UTC
From: Mike Vasiliades
Topic: 933 Message: 14948

Can anyone tell me when Phoenix Fire finally goes digital will they have an analog freqency for unit/group paging? Thnak you for your time..

14949. Re: Apache Junction P.D.

Yahoo group: ArizonaScanner (2007 — 2012)

From: JoAnne West
Topic: 14935 Message: 14949

To receive AJ PD you need their TG 3107 and 3108 added to Mesa's Talk Groups.

Hello from the Grand Canyon State.

14950. Re: [ArizonaScanner.com] Frequency request/PFD Tac Channels

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2008-07-02 02:16:08 UTC
From: Michael Vasiliades
Topic: 14916 Message: 14950

Yes, there is a 2004 report (94 pages) on PFD's website about the problems there were having with 800 trunking.

Subject: Re: [ArizonaScanner.com] Frequency request/PFD Tac Channels

Didn't PFD do some testing and put out a report that found 700/800
simplex penetrated buildings better than VHF for fireground? Also,
I've read a thread a while back in radioreference that said they were
testing some type of simplex to trunked system patching system. (Might
have been tied in with the simplex testing info.) Wonder if we'll be
seeing something in those frequencies coming up sometime in the future.

14951. Re: [ArizonaScanner.com] Frequency request/PFD Tac Channels

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2008-07-02 13:04:52 UTC
From: Ed (K9EDK)
Topic: 14916 Message: 14951

That report is old and there have been studies since then. I have not seen
the results yet.

Ed

14952. RE: [ArizonaScanner.com] Frequency request/PFD Tac Channels

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2008-07-03 01:57:43 UTC
From: Dan Rollman
Topic: 14916 Message: 14952

One more variation of these studies has been the IAFC's Digital Project Working Group, which released an interim report on Fireground Noise and Digital
Radio Transmissions last month. See
http://www.iafc.org/associations/4685/files/digProj_DPWGinterimReport.pdf

One interim conclusion appears to be the IAFC determining that digital technologies really do need to be "enhanced" if they are to "achieve the same or better level of intelligibility quality of analog."

One more variation of these studies has been the IAFC's Digital Project Working Group, which released an interim report on Fireground Noise and Digital
Radio Transmissions last month. See http://www.iafc. org/associations /4685/files/ digProj_DPWGinte rimReport. pdf

One interim conclusion appears to be the IAFC determining that digital technologies really do need to be "enhanced" if they are to "achieve the same or better level of intelligibility quality of analog."

14954. Channel Assignment, Phoenix, 462.950?

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2008-07-03 18:08:22 UTC
From: Robert Homuth

Channel Assignment, Phoenix, 462.950?

What is this used for? I hear Morse identifications, but I only heard a dispatcher once a long time ago calling a hospital. She was the only side of the conversation I logged, sounding like half-duplex.

Thank you,
Robert

Phoenix, AZ

I show this frequency as "emscom 9" in my list.

It is listed in radio reference database to a wide range of agencies, most of which are healthcare related.

Hope this helps.

I generally only hear traffic anymore on EMSCOM 4 and EMSCOM 10.

That's MED 9.

MED 9 & 10 are used by Phoenix Fire and Tucson Fire for Hospital/Ambulance communications.
MED 1-8 are used statewide by EMSCOMM which is dispatched by DPS.

See the EMS Radio system maps in the files area of the group.

Hi Walter:

The one I referenced (with a bad URL) shows usage very clearly. Apparently there are different obvious paths.

On the Radio Reference Home page,

Select Features -> RR Database
Shows map of the US
Scroll Down to Dark Blue bar - Get Radio Information
Scrol Down to Light Blue bar - Search Radio Data
First line:
Search State/Frequency -- Enter Arizona and 462.950 and press Search.

You get
http://www.radioreference.com/apps/db/?action=isf&stid=4&freq=462.950

Search Results for 462.950 in Arizona
Freq OutFreq InToneCallsignDescriptionCategoryAgency/CountyState
462.95000467.95000136.5 PLEMSCOM Channel 9 (Phoenix Channel Assignments)EMSCOM Common/SharedCommon/Shared
Arizona AZ

I sent the first message from my PDA -- keystrokes are at a premium, and I dropped the 8 from stid=48 ... sorry.

I really wanted to show the Robert, the person who inquired, how to get information like this for himself. It's faster, and usually authoritative. Marvelous site.

Apparently, when you query in different places at RR, you get back different data, because I, too, found other queries that would return all the license data, like your query apparently did.

And, by the way, your first reply - to Robert - posted while I was composing my first response to him -- so, by the time my reply got there, it looked like mine was in response to yours, but it really wasn't. If I had seen yours, I probably wouldn't have replied. I don't argue with the expert on a subject.

Hope y'all enjoy the holiday. Since it falls on my RDO, it's the first one I've had off in a while.

This is Med 9, utilized in the Phx area to coordinate bio-med patches to
local hospitals. In other areas of the state it's used as a patch frequency.

Hello group,

Anyone have a first hand comparison of the PRWIN's performance
using the GRE PSR500/600 scanners vs. the Uniden BCD396/996's?

I've read good things about them doing better on simulcast
systems than the Unidens...

Thanks!

Steve Isoldi - K2AUX

Hi,
I own a BC396 and a PSR500.
I've monitored the Phx 800 mhz system with both, from my home in Gilbert and from my car, while drving around in the valley.
In my opinion the GRE500 works a bit better than the BC396.
Still not getting 100% though.

At home I use a Radio shack disconne I think its called, mounted on my roof.
In the car I mounted a mobile antenna to the roof of my car that I cut for the Phx 800 MZH system. I have tried both the above on both scanners, as well as the Radio Shack 800 mhz rubber duck & and the stock rubber ducks. The GRE seems to receive a bit better in either case for that system.
Just my 2 cents.

SQ44's rig is being worked on. Since there is no reserve Squad, the equipment is split into 2 rigs. They run in tandem on calls that require the squad's specialize training and equipment. For EMS/fire calls, they can take one or the other, or both.

He's the tactical laison officer for Phx PD/FD, a linked employee who interfaces between the two agencies on incidents. They drive a white expedition with an assortment of dash and grille mounted lights.

I've heard them dispatched, along with "Rescue 571", and they come up
on the 153.770 South Phoenix channel.

Gila River? Gila Bend?

Thank you,
Robert

Brand new station, just south of Smith-Enke Rd on Porter, in Maricopa.

I think Rescue 571 and 572 are SW Ambulances.

14982. 2008 Phoenix Fire Changes

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2008-07-13 01:21:00 UTC
From: bradkudler
Topic: 14982 Message: 14982

Anyone know what the planned changes are? I've noticed the small changes already of not placing units on Blue Deck channels and using channels 2 and 3 more often and not just as violent incident channels.

Is it still projected to have a full digital system working by 2011? Or has the date been moved up?

14983. Re: [ArizonaScanner.com] 2008 Phoenix Fire Changes

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2008-07-13 19:01:37 UTC
From: Ed (K9EDK)
Topic: 14982 Message: 14983

Phoenix FD is making some subtle changes in the channel alignments. The three Blue Deck channels were all repeaters and someone decided that repeaters were unsafe for fireground operations and nixed them. Channels 13 and 14 will become active TAC channels in the near future, replacing two of the three lost channels. There is no longer a "violent incident" channel, and hasn't been for a long time. Channel 2 will eventually become an "info" channel where fire units can talk to Alarm when not assigned to a tac channel (channel 1 is frequently too busy to handle anything but dispatches). Bottom line, we lose 4 tac channels (A2, B1, B2, B12) and get only 2 back (A13 & A14).

As far as a digital system, Phoenix FD is going to a hybrid digital/analog, trunked/non-trunked system I don't know about any projected dates or the details on how the system will work, but it's supposedly in the works. If I hear any more, I'll be sure to share.....

Ed

From: ars902
Topic: 14985 Message: 14985

Howdy All, has anyone ever come up with an accurate reason why Avondale PD has moved over to the Glendale PD system? One of the reasons the Chief gave during his bamboozle meeting with the city leaders was his need to be able to work closely with the MCSO. I'm still wondering why they are no longer on the county system. Thanks for any responsible replies.

Per G.P.D.'s communications division, Avondale was using GPD Ch12, TG 329, while Avondale's equipment was undergoing repairs.

This weekend I wandered over to Mobile from Maricopa, hoping to get a picture of 5 of Brush 187 in quarters. Didn't happen. All I managed to get was a shot of the building, the "official" sign and the actual parking area for the unit.

Well, on the way home today I happened to look into the Bashas' parking lot in Maricopa and there they were! I hooked several pictures of the unit as well as a GFD pickup/utility truck. Neither unit is numbered. I think I have photos of BR-187 with numbers on in the past, but I'll have to find them.

The link to the pictures I've taken so far is here. Please take a look and let me know what you think. Also, does anyone know what the second unit is? Is it a BC? or just a utility unit?

The PSR scanners have a more modern dsp and do a bit better on this system than the older uniden models. I would say 10% better.

However, if you really want to hear 90%+ of everything and are currently getting a bunch of garbled transmissions, what you need is an outdoor yagi, to attenuate all but one nearby site so you can get things clearly. I have done just this with great success and now hear Phoenix PD clearly, 90%+. Antenna, cable, and static discharge ran around $100 but boy was it worth it. I have listened to garbled transmissions and cutouts for years and finally have relief, and am able to monitor my favorite system again (hadn't enjoyed it since the switch years ago).

If anyone wants tips on how to aim their yagi (it is not as simple as just aiming at a nearby site), email me.

14993. Yuma Proving Grounds new systems?

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2008-07-16 16:38:46 UTC
From: John
Topic: 14993 Message: 14993

Took a trip to San Diego through Yuma and found some unlisted control channels:

409.1125 cc System BC10h NFM Yuma Proving Ground?
(AZ 95 @ Cibola area)

410.1750 cc System BC11h NFM Yuma Proving Ground?
(AZ 95 @ 2 Guns area on 7/11)

409.7125 cc System BC11h NFM Yuma Proving Ground?
(AZ 95 @ 2 Guns area on 7/15)

409.7000 cc System B317h NFM Yuma Proving Ground?
(AZ 95 @ Stone Cabin area)

Saw several TGs on the YPG systems, but my 396 wasn't hearing and audio .

Anybody in Yuma have any more info?

I SECOND THE BELOW MESSAGE...

I have a RS 2096..

I installed a YAGI about a month ago where I had a dicone peviously. The yagi if pointed correctly will improve reseption to near %100. I am in central PHX and listen quite bit to PHX PD central,north and south. Listening now is great and I would incourage anybody that is getting frustrated with the garbly reception you are probably experiencing now to spend the $100 or so and enjoy too.

I have heard that one of the BC's is getting a new truck. Not sure about anything else. All of Phoenix's apparatus are leased by the department through the City of Phoenix, so it is very possible that new apparatus are in the works.

15007. Re: SRP EDACS

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2008-07-18 20:31:23 UTC
From: Alan
Topic: 14989 Message: 15007

I actually just plugged in the Queen Creek frequencies for SRP. I can barely receive them where I am down in Johnson Ranch without switching to an amplified antenna.

When I'm in the Mesa area, I can plug in the Chandler frequencies and also receive traffic with no problem.

I do hear activity on the QC system, but it is not constant.

Hector,

My name is Mike. I have registered, updated firmware and programmed local systems for a dozen BCD396's on behalf of friends and my employer. Let me know what you are comfortable paying for 1) updating firmware and 2) programming local systems. I will need to know your registration login and password to the Uniden support site, if you agree.

Please reply to this e-mail if you are interested.

It is just referring to the tactical channel that the call is on. Blue Deck is more of the east side area that don't use Mesa freq's. Buckeye used to be on Blue Deck 12, but they have been using A9 and A3 for the most part when they are dispatched.

On the old 24 channel radios, the channels were on 2 banks of 12 each. A-deck and B-deck. A-deck channels are 1-12. B-deck channels are Blue1-12. Now that we have new radios, there are no longer two decks. We used B1 and B2 in Chandler, B8, B9 and B10 are the VHF link to the Mesa 800MHz system. B12 was Buckeye. Some of the other B-decks were assigned to VHF police frequencies, one link to the NWS and an additional Channel 1 on the B-deck (11, I think). Now that PD is totally on the PRWN, those channels are no longer active.

15021. Phoenix alarm audio levels

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2008-07-25 01:51:13 UTC
From: Jason McDowell
Topic: 15021 Message: 15021

Is it just me or did someone fudge up the audio levels today for Phoenix Alarm LOL. Some tac channels are fine but most of them are barely audible. It's evident when dispatches audio changes from high to low based on what tac channel or area the dispatch is for. Keep having to turn the audio up and down, i'm about to turn it off and listen to something else LOL.

Jason

Wow. The original post from me that "engine259" attached his post to is 6 years old.

There's been a few changes since then.

I'm curious as to the West Deputy that runs in a GFD P/U. Is the West Deputy the new designator for the former BC151, or does GFD now run a West Deputy *and* BC151 *and* BC152?

15024. RE: [ArizonaScanner.com] Re: Glendale FD

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2008-07-25 04:40:11 UTC
From: Chris F.
Topic: 3374 Message: 15024

Can't say on this, but I've seen BC151 and the West Deputy seperatly over the last year or so.

One was a lightning-strike house fire (BC 151 & West Deputy) around 53rd & Peoria, and the other (West Deputy) at the GPD accident

That happened on Glendale a few months back.

Chris

15025. South Phoenix

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2008-07-27 19:51:30 UTC
From: debborah369
Topic: 15025 Message: 15025

Hello all,

I'm new to the group and new to scanning in Phoenix. Although it was a hobby when I used to scan back in NY, I still consider myself a beginner and would love to learn more about it. Since I am a novice, I purchased a new scanner because my old Uniden couldn't pick up jack. It's a Radio Shack Pro-433, and I'm unsure if it's a good start.

Anyway, I would love to have a list of all the Phoenix frequencies, but am especially interested in the South Phoenix area. I live in a new development and have heard that there have been robberies at gunpoint in my area. It would be nice to have a heads-up of my surroundings. Some of the stories I've heard have never been in the paper or even listed on azcentral.com where you can check the crime dates and types of crimes that have occured in any given zip code, so I have no idea if these people are bs'ing. :)

I hope to gain a wealth of knowledge through this group. Any help would be greatly appreciated.

Thanks,
Deb

If you want to listen to Phoenix Police Dept. You'll need a P25
trunking capable scanner.
You can recognize a usable model Radio Schlock or Uniden by the number
'96' in the model number.

Others can tell you the GRE models that will work.

Expect to pay $300 +++ for a used one.

RadioReference.com has the best information on frequencies. There are
also P96 files in the Files area of this group.

15030. RE: [ArizonaScanner.com] South Phoenix

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2008-07-30 08:25:47 UTC
From: Chris F.
Topic: 15025 Message: 15030

Or, if you want a basic list, Uniden 796D, 396D, 996D or Radioshack/GRE Pro-96 or later,

Or like Walter said, any “P25 or Digital Capable” Scanner. New they are $500+, ~$300+ used.

A lot of the models available are NOT P-25 or Digital.

I’d recommend the Uniden’s over the Radioshack models based on personal preference and technical merits.

Phoenix PD has their own fleet of helicopters.
They consist of AS350 B3's and two or three A119's (Koala).
They also operate one twin engine A109 Power that is a joint police/
fire unit.
To my knowledge there are no firefighters assigned to the aircraft,
however they do utilize this aircraft for hoist operations and
tactical work with the fire department.
It is painted Red and White and says Phoenix Police and Fire on it
where as the others are all blue and white and just say Phoenix PD.
The pilots for all aircraft are Police Officers.

Hope that helps!

From: rgaun@aol.com
Topic: 15040 Message: 15040

Hello to everyone in the southwest!

I was wondering if anyone has an up to date list of unit numbers, town/cities that the Phoenix Center dispatches? My understanding that the one in the group file (2005 verson) is out of date. If a newer one is out there feel free to email direct.

Thanks in advance!

Phoenix PD sold off all of their MD500's well over a year ago. Actual
the MD500's were sold off more than 10 years ago, and the Notar 520s
(which were inherited by MD Helicopters, which is separate from
McDonnell Douglas)were sold off over a year ago.
They are not exclusively flying that AS350 (A-Star) and the Agusta
119's and 109 (The 109 is Twin engine, and the others are singles).
The 109 is red and white, and the others are all blue and white.

My bad.
I thought I was still hearing the NOTAR's in my neighborhood.
I have seen the Agusta once or twice, but mostly the PD only birds.

From: Fyrfotog2@aol.com
Topic: 15044 Message: 15044

Phoenix PD operates the helo for the fire dept when its needed. PD has fire approved pilots and observers to staff the helo unlike the regular PD pilots. Its actually lettered Fire/Police on one side and fire/police on the other. There is a rumor as to the lettering. -David

While in Cottonwood today spent some time watching Phoenix Police Fire Department 109FB helo do touch-and-goes at Cottonwood airport (CTAF 122.7).

Does Phoenix run a combined helicopter fleet? No dedicated LE or FD units?

15045. Phoenix Police/Fire helo

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2008-08-02 19:25:51 UTC
From: Fyrfotog2@aol.com
Topic: 15045 Message: 15045

Sorry I goofed on the lettering.

The red/white helo says Police/Fire on one side and Fire/police on the other. I have images of both sides.

The rumor was that when the door was opened on the fire/police side, the word fire was blocked out only showing the word poilce. Sort of humorous.

15047. School District on 173.375

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2008-08-06 23:47:51 UTC
From: John Timmons
Topic: 15047 Message: 15047

Several months ago I started a thread concerning my interest in 'Valley' school district bus transportation frequencies. One frequency that was mentioned was 173.375. I have monitored the frequency for several days now and found it to be quite active. I am not able, however, to determine what district is using this frequency for student transportation. I am certain this is a West Valley district, having heard references to 35th, 85th, and 107th Avenues, "Union", "Buckeye", and specific school names such as Copper Canyon, LaJolla, and Early (?).

Can anyone put these bits of information together and let me know what school district this is? It is also odd that the district operates on what is usually a frequency used by the federal government.

Any help would be appreciated in solving this mystery.

John

I am in search of the following frequencies for the Williams/Flagstaff area. Any help would be appreciated. Thank you!

-Flagstaff Medical Center EMSCOMM. This is the frequencey used by EMS to patch through to the Medical Center ER what they are bringing in.

-Guardian Ground (Flagstaff Area EMS)

-Lifeline Ambulance for the Williams District.

Thanks!

In the files are of the group' webpage, are maps shwing the EMSCOMM
frequency use for the entire state.

As to Guardian, someone else will have to answer.

Guardian Ground Ambulance 155.790 PL 131.8
Guardian Air 152.285
Lifeline Ambulance 152.345 (Mt Francis)
Lifeline Ambulance 160.170 (Mingus)
they have another tower on Bill Williams not sure what that freq is though,
but Ive picked them up in Williams & Flagstaff using the Mingus freq.

As for EMSCOM they really dont use that too much, most of it is done by cell
phone calls directly to the ER Patch Phone

I tried the frequencies that are listed for 1 and 4 in exceptions last night and they did not work. I am also having trouble deciphering the regular EMSCOM map into the correct frequency for the Flagstaff area (I am new to this.) At certain points I know transmissions were happening on FMC's EMSCOM but was unable to pick up.

Thanks!

EMSCOM-1

463.000

EMSCOM-2

463.025

EMSCOM-3

463.050

EMSCOM-4

463.075

EMSCOM-5

463.100

EMSCOM-6

463.125

EMSCOM-7

463.150

EMSCOM-8

463.175

EMSCOM-9

462.950

EMSCOM-10

462.975

This is what I have in my Pro-97. if you leave the tone at 0.0 on mine it does the code search automatically (I think).

I don't remember where I got this from so I am not sure how accurate it is. I do know I hear traffic on 4 and 10 fairly often.

Hope this helps

if you listen to 463.100 thats the EMSCOM freq that Flagstaff DPS Ranger Air Rescue Chopper is dispatched on as well
Guardian very seldom uses EMSCOM anymore, Lifeline uses it to talk to FMC once in a while because they have cell phone reception problems un the Belemont area on I40 , sometime you get lucky and hear the National Park Service Helo from the Grand Canyon talking on EMSCOM to FMC they dont use a EMSCOM call number they just call themselves NPS Helo 368 .

From: Walter Howard
Topic: 15059 Message: 15064

All EMSCOMM traffic uses 136.5 tone.

MED (not EMSCOMM) 5 is the main calling channel statewide.
The MED designation is set by the FCC nationwide.

Again I will point people to the files section of the group website.
Not only is there info on the Highway Patrol and EMSCOMM, but some
frequency files. That's where I got the file I put in the DPS PIO's
Pro96.

And, every message ever sent on this list is archived and searchable.
Maybe someone's already answered that question you've got. Have a
look!

15065. Re: [ArizonaScanner.com] Re: School District on 173.375

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2008-08-12 18:26:18 UTC
From: John Timmons
Topic: 15047 Message: 15065

Thank you, Walter. I believe you are absolutely correct in identifying the Tolleson Union High School District as the school district using 173.375 as their school bus transportation frequency.

For you and others interested in monitoring the various school transportation communications frequencies, I have confirmed 155.175 is indeed the transportation frequency used by the Gilbert Unified School District. Like Tolleson, it is usually quite busy. Thanks again, Walter.

I don't think they will because they have more open area's . But again so does MCSO ...But 1 call strikes me is 1 night i heard a PCSO deputy stating to dispatch that there radio's can't reach out to canyon lake because of no tower . if i'm not mistaken VHF can go further that 800 trunked . The vhf signal bounces off the sky and mountain's ...But PSCO just might go 800 but i don't think they will

With everyone going digital, I was wondering if anyone had heard
anything about PCSO going to a digital system anytime soon? Is there
even any talk about it? Thanks!

I'm guessing that you are refering to the BC-898T scanner. The BC-898T can scan Conventional and non digital trunked systems. That means that you can scan Chandle, Tempe, and Scottsdale. Mesa, Gilbert, MCSO and Phoenix are all on P25 digital systems that the 898T can not listen to.

There is still plenty of stuff to monitor with it though as most fire departments are still conventional or simlcast to conventional channels.

There was an obvious crime scene area taped off with several MCSO units last evening at 213th Ave & Patton, just south in the desert area. Still taped off with detectives there this morning. Anyone have any idea of whats going on? Have not been able to locate any info at all on it.

VHF and UHF don't bounce off the sky but they do bounce off of rocks
and are effected by storms and and weather by a phenomonen called
ducting.

If they're smart they won't change.

Thanks for the reply and information. Yes, you are correct, it is the BC-898T. I actually bought this for my 89 year old mother who loves the entertainment it provides to her. Are there individuals or companies that provide programming services? I have succeeded in programming some of the conventional channels, but I hoped it could do a bit more with the right programming.

Impossible. Our system doesn't have a 'simplex' option for dispatch.
You must have mis-heard.

We DID have a couple of metro sites down until we could reset them.

If DPS doesn't have simplex capabilities I would really be surprised. No dispatch center should be without the option of talking around the repeaters or remote bases. Any service that doesn't have backup around computer controlled devices is asking for trouble. BUT then computers never crash do they? I would trust my life to a Microsoft controlled product.(NOT!) (We're sorry Windows has encountered an unrecoverable error and will now reboot.....right in the middle of your 911 call)

A wise man once said ... "Trust Walter Howard when he says something
about DPS radio system".
Walter is the Resident EXPERT on DPS radio systems.
If Walter says they don't have it, then I guess you are surprised, but
at least you are now better educated on the DPS system.

DPS seems to have made their system work quite well for a long time.
Ironically, it seems we hear a lot less "issues" about the older
analog DPS radio system than some of the new fancy Motorola trunked
systems.

Art, trust me when I tell you that Howard knows what he is talking about with the DPS Radio System. In fact, Howard is likely thebest informed person on this group when it comes to the DPS System.

Simplex is great when you are close to each other. You may or may not be aware that Phoenix has three dispatch centers, Phoenix, Tucson & Flagstaff. I seriously doubt that a dispatcher in Tucson is going to hear someone in Mesa via simplex from an antenna in Tucson. It is possible if the dispatcher is in Phoenix as long as the towers are accessable. As Howard said, they lost towers so they could not hear or talk on those towers at all. No tower no talk, repeater OR simplex.

DPS has an EXTENSIVE radio system with some very long microwave paths to keep them in contact with their officers on the road. It isn't perfect, but it works better than many systems I have heard. I wouldn't even want to think of what it would cost the state to replace the system with a trunked system that would give them even 10% of the coverage and reliability of the current system.

A new system may get legislated or regulated in, but I don't look forward to it in many ways.

The original post from Walter said that DPS does not have a simplex capability in their dispatch center.
Certainly the car can go car to car ... we've all heard them do that.
Walter's comment was "Impossible. Our system doesn't have a 'simplex' option for dispatch.

15084. RE: [ArizonaScanner.com] Re: DPS tower problems

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2008-08-15 22:46:18 UTC
From: Dan Danz
Topic: 15073 Message: 15084

Note that Walter said "Our system doesn't have a 'simplex' option for dispatch."

What the DPS system does have is the ability for Car-to-Car simplex operations.

To do that, the car radios have two mode positions for each "channel".

Normal mode: Repeater, where the cars all listens on the repeater output and transmit on the repeater input frequency. The dispatcher listens to the input frequency and transmits on the output.

Direct mode (what you call Car to Car) where the car changes to transmit on the repeater output frequency while still listening to the same frequency.
Thus, this unit can be heard by other nearby units and - if that unit switches to Direct mode it can talk back. As noted, this mode does not use towers. If you're not close by, you're not going to hear the transmissions. Another distinct advantage is that when operating in this mode and nobody is transmitting, the cars are still monitoring the repeater channel for calls from the dispatcher. They just have to switch their transmitter to repeater mode to answer the dispatcher.

For a dispatcher to participate in this conversation, the dispatcher would have to have a receiver on the repeater output frequency. And for the car to hear them they would have to transmit on the repeater output frequency which then means everybody and his brother hears them.

I'll trust Walter to be the ultimate authority on whether or not they have this capability. Folks: he's not guessing or stating an opinion like some of you are.

This is distinctly different than trunking systems, which require prior agreement between the two units that they are going to use a simplex Talk Around frequency (not involving the towers) or a repeated Talk Group dedicated to car-to-car conversations. Those of us who use trunking systems sorely miss the ability for one unit to quickly talk to another nearby (backup) unit without involving a dispatcher. You hear them all the time on MCSO channels:

"A351: can I have A352 on Car to Car? Dispatcher: A352 10-50 to Car to Car.
A352: 10-4, switching. "

But they threw that baby out with the dish water when trunking systems came rushing in.

You don't hear that on DPS channels unless the cars are not close enough to talk Direct.

Since repeaters are involved on most DPS channels, it is also possible for one unit to hear another on the repeater (they call it "copy direct") but that's not really what's called Car to Car.

And I don't ever remember hearing a DPS unit ask for another one to go Car to Car . at least not in the Metro area.

Depending on where you are listening from, and how the dispatcher has the sites configured, it's quite possible to hear the same radio traffic from more than one site. District 6 has 5 sites.

I'd go into the configuration possibilities, but that could take SEVERAL pages.

Anyone travelling on I40 around Winslow/Holbrook, has the unique opportunity of hearing 3 stations at the same time.
It's a g-- awful sound.

As you said Dan D;

In Car-to-car' mode, the officer transmits on the repeater output
frquency.
Therefore, he/she just switches to 'car-to-car' [marked 'direct'
or 'talk-around' on the radio heads], and calls the other unit.

Only if the other unit doesn't respond, you *may* hear a request
for 'car to car on district'. Within individual squads, that kind of
traffic now tends to be handled on cell phones.

Walter, KD7BJJ

PS: Thanks for the kind words.
Now if that could just get me a raise <VBG>

There is a scheduled International Space Station contact with Boy Scout Troop 105 in Santa Barbara, CA on Tuesday, August 19th, starting at 0839 Phoenix time.
Current prediction has it rising above the Phoenix horizon at 0842 and setting at 0847.
Downlink frequency of 145.800.
I've heard these passes using either a dualband handie or a handheld scanner.

Is this a technical issue or a procedural issue?

I've noticed this "mother may I" system in use with some police departments operating on conventional radio systems in Southern California.

Some of both.

The system is designed for officer to dispatcher communication.
Any officer to officer comms are strictly secondary.

When officers use car to car (direct), other units can still hear the
dispatcher and he/she is controlling the radio traffic.

When doing car to car 'on district' (repeater) the channel is no
longer under the dispatcher's control.
Not something you want for more than a few seconds.

As an aside, we did a traffic study a few years ago. The average
officer transmission was 3.8 seconds, and from the dispatcher, it was
4.0 seconds. Older trunking systems could take up to 1/2 second to
give the go ahead tone. Doesn't seem long until you look at the actual
message length.

15092. RE: [ArizonaScanner.com] Re: DPS tower problems

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2008-08-16 15:11:34 UTC
From: Dan Danz
Topic: 15073 Message: 15092

Tracy -

One of the issues is: a dispatcher has to know what radio channel his/her units are on, at all times. Using the VHF/UHF "direct" mode doesn't interfere with that - and in fact enhances it because the dispatcher and everybody else on the channel is not distracted by requests to go car to car.

If the units are too far apart to hear each other on simplex/direct mode, then they have to involve the dispatcher in switching to some other channel.

If there is no other channel available and they have to go "car to car" on what DPS calls the district channel, or what MCSO calls the "main channel", then by all means they should have permission of the dispatcher. One case where you'll see this rule relaxed is when the channel is dedicated to a particular incident (e.g., Phoenix PD Chase, MCSO East-or-West TAC).

On the subject of asking the dispatcher for permission to contact another unit on the car to car channel/talkgroup, in most departments it involves the kind of exchange:

A351: ?

Dispatcher: A351 go ahead.

A351: Can I get A352 on car to car?

Dispatcher: 10-4. A352 ?"

A352: Go ahead

Dispatcher: A352 go car to car with A351.

A352: Switching.

Sometimes, these 7 transmissions are shortened and abbreviated but they still tie up the main channel.

Scottsdale PD has an interesting variation that appears to eliminate a lot of it . I don't know officially, but it appears from listening to them that any field unit can come up on the channel and direct ONE transmission to another unit WITHOUT dispatcher intervention. For example, "3P11 to 2F7 switch to Edward (a talk channel)" ." 2F7 switching." This accomplishes a lot with two transmissions, AND the dispatcher is aware of what channel the units have gone to.

One other variation of this is for departments that have vehicles equipped with multiple radio systems. For example, many MCSO units have a trunking system radio AND a VHF radio. The VHF unit is primarily so those units can use the

MCSO VHF "Search 8" channel. Now, that's a dispatcher controlled channel and car-to-car on it requires dispatcher permission. But since it's a non-trunking system, the field units can use the "direct" mode (that started this whole discussion) to talk to other nearby units. If you're nearby and monitoring search 8, you'll hear this. At one time, some of the marine VHF frequencies that are programmed into many of the radios were also used until the Coast Guard Auxiliary and other agencies complained and the practice was forbidden. MCSO dispatchers do have a receiver on the repeater output frequency; the antenna is on the downtown courts building, I think . So we "could" hear these transmissions if they're close, but most of us keep the receiver turned down - it's hard enough to listen to two-or-three main channels per dispatcher and 2-3 other channels without listening to what is frequently chit-chat. If the units need a dispatcher, they can use their main channel or even switch to repeater mode on the channel.

One final note: the term car-to-car is overloaded. There are four distinct cases I can think of:

Adjacent unit talk: coordination between units that are close to each other. Best handled by simplex/direct mode if available.

Intra-district talk: communication between units that are not close enough to each other (e.g., the sergeant is at the other side of a district). Requires dispatcher intervention, sometimes requires use of the main channel.

Inter-district talk: A Queen Creek deputy sheriff on one main channel needs to talk to a Wittman deputy sheriff working off another main channel because they're both working elements of the same incident (characterized as: would you go by such-and-such an address and see..). In most cases this requires use of a common channel and intervention by dispatchers on each of the main channels.

Inter-agency talk: Uses the inter-agency channels, which requires dispatchers from both agencies to coordinate the switching of their respective units.

Is this a technical issue or a procedural issue?

I've noticed this "mother may I" system in use with some police departments operating on conventional radio systems in Southern California.

Very True, of note though MCSO still uses Search 8 a lot in direct mode to "chit chat", good listen if you're in one of the patrol areas. And every now and then the traffic channel for CPD gets people using it for the same. Each agency seems to have a channel that is somewhat deligated for such use even if it does go off the repeater.

To: ArizonaScanner@yahoogroups.com
Subject: RE: [ArizonaScanner.com] Re: DPS tower problems

Note that Walter said "Our system doesn't have a 'simplex' option for dispatch."

What the DPS system does have is the ability for Car-to-Car simplex operations.

To do that, the car radios have two mode positions for each "channel".

Normal mode: Repeater, where the cars all listens on the repeater output and transmit on the repeater input frequency. The dispatcher listens to the input
frequency and transmits on the output.

Direct mode (what you call Car to Car) where the car changes to transmit on the
repeater output frequency while still listening to the same frequency. Thus, this unit can be heard by other nearby units and - if that unit switches
to Direct mode it can talk back. As noted, this mode does not use towers. If you're not close by, you're not going to hear the transmissions. Another distinct advantage is that when operating in this mode and nobody is transmitting, the cars are still monitoring the repeater channel for calls from
the dispatcher. They just have to switch their transmitter to repeater mode to
answer the dispatcher.

For a dispatcher to participate in this conversation, the dispatcher would have
to have a receiver on the repeater output frequency. And for the car to hear them they would have to transmit on the repeater output frequency which then

means everybody and his brother hears them.

I'll trust Walter to be the ultimate authority on whether or not they have this
capability. Folks: he's not guessing or stating an opinion like some of you are.

This is distinctly different than trunking systems, which require prior agreement between the two units that they are going to use a simplex Talk Around
frequency (not involving the towers) or a repeated Talk Group dedicated to car-to-car conversations. Those of us who use trunking systems sorely miss the
ability for one unit to quickly talk to another nearby (backup) unit without involving a dispatcher. You hear them all the time on MCSO channels:

"A351: can I have A352 on Car to Car? Dispatcher: A352 10-50 to Car to Car. A352: 10-4, switching. "

But they threw that baby out with the dish water when trunking systems came rushing in.

You don't hear that on DPS channels unless the cars are not close enough to talk
Direct.

Since repeaters are involved on most DPS channels, it is also possible for one
unit to hear another on the repeater (they call it "copy direct") but that's not
really what's called Car to Car.

And I don't ever remember hearing a DPS unit ask for another one to go Car to
Car . at least not in the Metro area.

I don't dispute Walter being the "resident expert". HOWEVER, having been a radio tech for over 40 years and worked for ISP (Idaho State Patrol) I do understand how dispatch centers work and I do understand the range limitations of simplex. At ISP we had a mobile with it's own mic hooked up to an antenna on the tower and it's own independent battery backups so we could at least talk locally should all the remote bases and microwave links and everything else fail. (Yes, a low tech backup - but did you ever see a Motorola dispatch console controlled by a computer go down?) The DPS system may not use simplex as such but I'll bet DSP has multiple ways of being able to communicate with their cars should one path fail. If they don't then they should. Because of budget limitations and supervisors that "know it all", some systems don't always get built the way they should be with backup systems.

I've always wondered what those hetrodynes were that I heard on the DPS channels, now I know. I don't consider this the best way to design a system. Hetrodynes cause by simulcasting from several towers on the same frequency can cause severe phase distortion interference and missed transmissions. FM capture effect doesn't always solve the problem.

Car to car communications takes place all the time without the officers asking permission from dispatch , they just do it. They can be finished in the time it would take to get the go ahead.

Anyone know what is going on at the Grand Canyon? I am hearing multiple air ships running SAR missions, Red Cross and Mohave Co. Command Vehicle responding.
I missed the incident call out as I was outside working on the yard.

I guess that would be why we (DPS) deployed our Comm trailer today.

It has an 'AIRS suite' (VHF, UHF, and 800 inter op channels bridged together).

From: Frank
Topic: 15098 Message: 15098

Hello there:

I overheard some information by some people that Valley Protective Services has an outdated and a radio system that doesn't work half of the time (Nextel Based Cellular Radio) and thought it worked on either a UHF or VHF Signal. If anyone has frequencies for this, I would appreciate any information thats available. I checked it against the mini-book (9th edition for maricopa county) and the big 8th edition book I have and unable to find anything for them and was told that they make a lot of arrests and broadcast it out on radio.

Anyone know if Tucson PD went digital or are they still analog. If they are
in fact analog can anyone give the freq's?? I am heading to Tucson at about
3pm today

Digital and Trunking go hand-in-hand a lot but there IS such a thing as conventional (non-trunked) digital P25. That's how Gila River is listed. I "think" that's what most Fed P25 is also. Someone else with more info will have to confirm if I'm right for them.

MCSO handles law enforcement inside .. on special detail 1 and 2 (analog TG's) which are probably only affiliated on the downtown Central Courts building tower. A regular dispatcher with CAD and ACIC/NCIC is on site. Callsigns are Robert-nnn ..

Phoenix PD handles law enforcement outside, but they do it on A2 - a downtown events TG that's encrypted. There's not usually a dispatcher on for them, but one of their squad is co-located with security and MCSO dispatcher.

The ballpark folks use four or five frequencies. I've seen their dispatchers (who use handhelds) switch back and forth to get cleanup crews, or parking, or field supervisors, or ticketing or whatever. What's really interesting is the extensive video surveillance that they have.

Each site has it's own unique call sign.
Dispatch (OpComm - Operational Communications) designates them by the
3 digits that make up the last part of that.
I can look them up if you want.

The radio 'repeaters' are capable of being duplex 'bases' (meaning
that the receiver is still actve when the transmitter is on). The
dispatcher can hear an officer even while he/she's talking.

They can also be setup to 'repeat' whatever the receiver hears
directly to the transmitter (also called 'in-cabinet repeat).

We have voters that listen to multiple sites and select the 'best'
audio to present to the dispatcher's ear, or to be sent back out
wherever the dispacher chooses, via a 'crosspatch'. This is the norm
in metro.
If you listen late nights, you'll hear multiple districts
'crosspatched' together. The officers hear each other, and know when
the dispatcher is busy with someone else.

Ask any more questions you may have and I'll answer what I can.

Walter

You actually have several choices for a digital scaner that will
follow MCSO.

From Radio Shack you have the PRO-96 Handheld and the PRO-2096
Base/Mobile.

From GRE you have the PSR-500 Handheld and the PSR-600

From Uniden you have in handheld The BC250D (with card), BC296D and
the BCD396T
and Uniden Base/Mobile BC785 (with card), BC796 and BCD996T.

All of thease units will work with the MCSO system, though I would
not go with the BC-250 or BC-785 unless you get them at a real good
price and are not interested in the other digital systems in town.

I would suggest a Uniden model, have had no problems with them.
Radioshack/GRE models

Do not have firmware updates as often as Uniden AFAIK.

If you are interested, I have a Uniden 796D I am selling, full digital.
Still a current model.

$200 cash - new ones are $500+

Chris

The GRE PSR-500/600 has had firmware updates every month for several
months now.

15124. Which scanner to recommend?

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2008-09-02 04:15:24 UTC
From: wlmr1001
Topic: 15124 Message: 15124

Now that there are three P25 trunking sites (two on the PRWN system and one on what appears to be ASU's system) it is going to get harder to recommend a scanner. AFIK the Uniden 396 portable and 996 mobile and the GRE 500 and 600 are the only ones that can handle the full range from the County's 3600 baud, 800 MHz system to Glendale's 800 MHz P25 system to the two systems above running both 800 MHz and 700MHz P25.

Of course Glendale and most of PRWN can be monitored via the Pro96 portable and 2096 mobile and the Uniden 296 and 796 scanners.

And to go back one step, the Uniden 250D portable can handle Maricopa County's system. (Is there a mobile version I'm overlooking?)

Hopefully I've matched up the capabilities correctly, please correct any info that's wrong or add to the list. I know there are other scanners that can decode a P25 voice channel but I don't think they can track any type of trunking.

The BC785D is the mobile version of the BC250D.

I can't think of any radio scanners that decode P25 voice without any trunk tracking capability. Kind of curious though. Can
you list a few models?

This would be a great project to compile a list of radio scanners with their capabilities related to specific local radio
systems. Would be a very helpful FAQ to list here.

As far as I know in regards to that, and it's been a long time since I've seen them,

Is add-on boxes to things like the ICOM radios that decodes P25. I don't think you will
find any that are separate, but some of the other members may be able to help.

Topic: 15127 Message: 15128

Youngtown PD is still dispatched on MCSO West talkgroups . listen for the 37x units.

El Mirage has their own digital talk groups on the county system, but is dispatched by Surprise PD (who themselves are on different analog talk groups on the same system). Check RadioReference.com for the complete list of talkgroups on the Maricopa County Radio Network ..

15132. Custom Search Results help

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2008-09-05 05:21:04 UTC
From: Bryan Goldtooth
Topic: 15132 Message: 15132

For the last two days I have been running my BR330T in custom search mode with BCtool. I need some help with a couple of Freqs. it snagged.

412.375
420.0375
412.275 pl 127.3
168.525
168.5125 pl 151.4

Some how the audio did not record. So I could not listen to what was being said on these channels.
I am located in Northern AZ. North of Flagstaff. All where monitored during regular business hours of 0700 to around 1800 hours.

Thanks,

Bryan

I am monitoring in Tuba City.
412.375 is T-Bird Radio from the BIA Boarding School. I missed it in my notes.
I snagged some more today. I have yet to check the audio recordings to see if it worked today.

15136. Uniden ESN?

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2008-09-06 03:21:16 UTC
From: Chris F.
Topic: 15132 Message: 15136

Anyone care to point out why Uniden started making it a requirement to jump thru hoops
for a ESN, etc. to upgrade firmware?

I don't see it as necessary considering the firmware will only work on THEIR model..

Thanks

The reason most likely is related to the license that Uniden has with
APCO for the P25 decode. Uniden wanted to make changes and APCO wanted
more money, so Uniden needed to be able to document how many units were
upgraded.

APCO has nothing to do with the VoCoder other than they chose the
flavor used in P25 today (IMBE), the company that licenses the VoCoder
to every vendor (including Motorola, MA/Com and Uniden) is DVSI
(http://www.dvsinc.com/prj25.htm) they are the only ones that would
stand to benefit from upgrades and wanting them tracked.

We are splitting hairs here. The point is SOMEONE wanted to keep track
of just how many units that Uniden upgrades. It may be Uniden, it may be
APCO, it likely is DVSI. It doesn't matter to us, the end user, as we
have no control over it (Ohter than not upgrading and giving our dollars
to GRE until they do the same thing).

15140. flagscanner.com

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2008-09-07 04:53:26 UTC
From: Chad
Topic: 15140 Message: 15140

I have changed up the site again. If you haven't noticed any changes than you probably haven't refreshed your cache. Simply press F5 next time you view the website. One of the biggest changes is that I have moved hosts/ servers and have a new domain. www.flagscanner.com

A new feed was also added! You can now monitor Arizona DPS (Highway Patrol) District 2. District 2 is the flagstaff/ North Central area. The feed also scans the DPS "Ranger" helo frequency, and the SAR frequencies.

Current feeds:
Flagstaff Police
Flagstaff Fire/EMS
AZ Highway Patrol Dist. 2

A big heartfelt thanks to the Scanamerica.us guys for hosting my feeds!

15141. Selling my BCD996T

From: tljb7
Topic: 14933 Message: 15141

I've decided to sell my Uniden BCD996T and decided to post this here in case anyone local would like to buy it. It is just like new and I have everything that came with it, with the possible exception of a CD if there was one. I don't remeember if there was, and newer versions of the softare are available for download from Uniden anyway. Most of the stuff hasn't even been unpacked. All I ever used was the scanner, power supply, and manual. I had it hooked up to an antenna hanging from the ceiling that I used with my previous scanner. It has been sitting on a shelf in the room with my computer ever since I bought it new, but I rarely turn it on. I'm asking $425 for it and am located in north-east Phoenix near 32nd st. and Thunderbird. Send me an email if interested.

Trust me, there will be a HUGE amount of traffic on this and other scanner lists when rebanding comes to Arizona.

They only JUST got the agreement with Canada for cross border issues. Haven't seen the same progress with the negotiations with Mexico.

The last firmware update I see for the Pro96/2096 is dated 2-20-2007

I have updated that to read December 2008. A new edition of the book is well underway, but unfortunately it is taking much longer than expected this time around to ensure the accuracy and detail that SWFD users deserve and have come to expect (and I won't publish anything that I don't fully believe meets that standard).

Thanks,
Dan Rollman

A lot of federal VHF band frequencies are used for telemetry. There are a lot of stations around Arizona to monitor flood
channels.

Definitely not telemetry, were not the usual data bursts, these
sounded like trunked data freq's but without decoadable trunk data,
and they lasted for hours.

I got the 173.050 going strong here on the east side of town, cant hear the others. I remember a fed system in NY that they fired up all the freqs like this to test, so quite possibly a new system. Anyone in the group in the know on this one?

If anyones interested, I've been logging while searching the fed band, would anyone like to see the results? I can post the freqs and the amount of hits. I'll actually post a weekly one if anyone wants.

Mike,

I'm picking up different freqs in the Tucson area.
172.2375mhz fairly strong and active at this time.
163.8375mhz extremely weak.

Unable to decode with Unitrunker. It does not sound like any of the
Motorola controll channel variants that we have here in Arizona.

Mike,

I have no idea at the moment. I posted two different 10-second clips of the audio on Radio Reference to see if someone might recognize it for us.

I am now picking up 173.05mhz nice and strong.

Mike,I have no idea at the moment. I posted two different 10-second clips of the audio on Radio Reference to see if someone might recognize it for us.I am now picking up 173.05mhz nice and strong.JohnSE of Tucson--- In ArizonaScanner@yahoogroups.com, AAR9SM AAR9SM <aar9sm@...> wrote:>> > John,> > I am getting those as well any ideal who they may belong to? Mike,

Unless they're trying out a new system for the DOJ TRS, then I don't think so. Everywhere else it is typical P25/Digital.

I wouldn't think they'd introduce something for the Presidential campaign, as neither of the campaigns is President yet :)

173.05 was active this morning, but gone by mid morning. The other active one was 172.2375, but comparing side-by-side, it is actually weaker than the 173.05 signal. 172.2375 is currently active.

Lots of hits on downloading my sound files of the two that I posted on Radio Reference, but no responses on what it is. I also scanned through the spectrum to see if anything else anomolous came up, but didn't find anything :<

Don't you just love a good mystery?
That's the fun of the fed bands :)

The data sounds trunked, but with no "data" to it (no variation of the tones) Maybe just a tone signal for testing modulation?

Has anyone gotten a baud rate out of it? I have Skysweeper and it has an analysis mode where it can read that, maybe I'll give that a shot.

Well Steve,

According to others who also monitor across the USA, it sounds like a Motorola system. To me, it's not a correct sounding signal. IF it will be the DOJ TRS that is supposed to expand throughout AZ and surrounding states, then maybe your thought that it's testing for modulation might make sense. The DOJ TRS is Project-25.

I've tried Unitrunker against it, my most favorite tool, and I can get nothing out of the signal. No recognition. It's been suggested to try an invert the incoming signal, so that'll be the next step for me. Anyone else using Unitrunker, tried it against the signal?

A few years ago there were a couple of VHF P25 control channels in the Phoenix area. I was able to lock on with the 396 but never heard any traffic:

IWN 1 165.6375
IWN 2 166.7000

I haven't heard anything on them during my recent vsits to PHX.

Just to be through, were you listening to them via the 800MHz P25
trunked Simulcast D system or were there legacy VHF frequencies still
active that you were scanning? If they still had VHF stuff on the
air, I wouldn't trust how much longer they may stay active.

Have you read the responses in Radioreference yet? Someone there has a pretty sound opinion that is is a test pattern being generated by a base station to be used for coverage testing, radio alignment, etc. (Something Steve guessed earlier, see his post below.) The guy referred to a v.52 test pattern number. If it's a test pattern, it's not control channel data so it won't be figured out by using any program like Unitrunker that "understands" control channel activity. Whether it becomes a control channel later is a mystery at this point.

A while back there was some sort of signal on a frequency for the PRWN system for Tempe (called Simulcast F in radioreference). Has anyone who heard that compared it to this?

Would be handy if the digital scanners were smart enough to recognize digital test tones if that's what this is for sure.

Thanks for the dilligence guys!

Heard this kinda thing before for the UHF Fed Prison System in NYC years ago. Also when BP finally made the big P25 switch here, there was alot of radio techs using clear P25 on the weekends, so listen up, and not neccesaraly on those freq's being tested.

Actually the fed bands can be interesting in AZ on the weekends. Lots more traffic than I used to hear in NYC. There it was loads during the week, nearly nothing on weekends.

I found my problem, I normally use win96 to upload my pro-2096 but a week ago I re did my pc because of all the junk my kids have been looking at or using with mypace.com. My pc was getting very slow. I thought i down loaded win96 to a cd for later use. Well when I went to use the cd it was not there so I lost all my win96 files and program , and I don't remember the key for it. I happen to have scancat lite plus on a disc yet so I decided to use it. I forgot to change the mode. I left the mode as AM instead of FM but still had the trunck checked. So when I went to upload the scanner all the trunking went under AM which is why I was not picking anything up. I now pick Mesa Police up very well on about half of dozen talk groups along with phoenix pd. So thanks for yourhelp !!! tom (scannerbuffsofAmerica group owner)

Another thing to listen for while scanning the band is "blank carriers". According to Chris Parris, Fed Files Columnist with Monitoring Times Magazine, when the DOJ TRS came online in Portland, OR, in addition to the test pattern transmissions, they were able to find some of the future voice channels from the trunked sites transmitting with no modulation. Apparently these carriers would be transmitting for hours at a time over a period of several days, turning out to be voice channels.

Morning kids... time for my $0.02 worth.... down here in my
location I have a great deal of congestion in the 163-168 that during any
kind of search, the damned scanner (Pro-2035) stops constantly! PITB....
so, I have opted to search between 170-174, which is a comparatively
quieter range for me!

I have been sitting here listening fro about 75 minutes now, and
so far I have only heard 2 freq's that I could not positively ID...

170.3500 weak data type sounds, fading in & out, not consistent,
but definitely there occasionally
170.4375 see above

I have an ancient entry for 170.4375 as something to do with
Secret Service, but 170.3500 is nowhere in my data base.

FMW = FM Wide
FMN = FM Narrow Like the USFS uses

I think is what it says in the scan-cat manual

15179. Glendale PD Question

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2008-09-21 04:41:58 UTC
From: phoenixscanner1
Topic: 15179 Message: 15179

Does anyone know where the Glendale PD comm tower(s) is located?

Thanks.

My mom worked for the City of Glendale many years ago in the
telecommunications division. I think she mentioned once that the
communication tower is on Shaw Butte.

Morning all, you can remove 170.350 from the list of
"possibles".... it is the input for the Border Patrol repeater on Mt
Graham (Heliograph). I need to update my version of Excel!

Sorry for the false alarm all!

Ed (K9EDK) would be the guy in the know!

My thought is they have 6 freq choices if re-using what they already
have allocated to them, that being the two unused Chandler Bluedeck's
or Buckeye B12 repeater inputs or outputs.

13 and 14 are SE Valley. I've been off work sick since last week, but I would suspect Chandler, Sun Lakes and Ahwatukee. Channel 8 should go back to S. Phoenix as it was before being pressed into service in Chandler. Channel 15 is an event channel and is not even monitored in the Alarm Room.

15193. Glendale missing...

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2008-09-24 05:24:45 UTC
From: John LaBua
Topic: 15193 Message: 15193

Hi all,

Tonight I heard something that I hadn't ever heard before. Glendale PD dispatch came on and told all units to switch to "G Deck" on their portables and that their vehicle radios were not capable of this change. They were all to flip a toggle switch on their portables to a different position and then change the channel to channel 10. Info channel would be on channel 11. They would also have no talk-around capabilities on this system. A roll call would be conducted on channel 10 and they should keep traffic to a minimum. They would need to stay there until the upgrade was complete.

My question is: Where did they go? Did they switch, at least temporarily to the Phoenix system while they performed upgrades on their own? I don't know of any other system that uses "deck" designations for their channel banks. Also, any idea as to what the upgrade was for? I know from listening that they have had problems since late last week with their MDC's and that messaging was either down or severely limited since last Friday. Was this upgrade for that? Also, what tg id's would be used for this type of switch. I opened up the Phoenix system but since I don't regularly scan or listen to it except for a limited number of talkgroups, I haven't heard a peep out of anyone from Glendale. I just heard an officer call in the the regular channel but nobody answered him and I'm guessing that he accidentally used his car radio instead of his portable because he hasn't come back on. They have been gone from their system for close to an hour now with no indication how long this will last.

Thanks for any help anyone can lend....

John L.
Glendale

This isn't where they went. Unless this exercise was held after 21:00 they totally vacated the system. I would also think that this talkgroup would be included in their vehicle radios and not just in their portables. They were specifically told that their vehicle radios were incapable of moving to this new talkgroup. I also have never heard any reference given on the Glendale system to a "deck" of any kind. The only system I have ever heard this on has been the Phoenix system.

As a side note, they appear to be back on the regular channels as of now (0513 hrs). They seem to be having a role call now so maybe they just returned. I just got up and the radio is generally pretty quiet at this hour so I don't know if they just came back or if this is something else.

John, is it possible you heard "C deck" instead of "G"? Reason I ask is that our portables here at C.O.G. have A,B & C deck capability, with 16 channels per deck.

I suppose that anything is possible but I really don't think so. I opened up the system in the scanner (I usually run it as a closed system) and they just weren't heard anywhere.

I still think that the issues they were having with their MDC's required some sort of upgrade to the system that required the entire system to be taken down. Since smoke signals are so darn inefficient nowadays, they moved temporarily to the Phoenix system. This would also make sense in the fact that the vehicle radios were incapable to make the switchover since their portables would be the only radios that would be required to be able to interoperate on the Phoenix system as during an incident response.

Maybe I am all washed up but would still like to confirm what happened last night. Again, all seems normal now but I've heard no mention of the changeover except after the roll call earlier, an officer said (since he had been overlooked during the roll call) "If anyone cares, I'm 10-4." The dispatcher said that she cared and he replied that "At least I am on the right channel now."

Have a good day Dave!

> > > Hi all,Tonight I heard something that I hadn't ever heard before. Glendale PDdispatch

came on and told all units to switch to "G Deck" on theirportables and that their vehicle radios were not capable of thischange. They were all to flip a toggle switch on their portables to adifferent position and then change the channel to channel 10. Infochannel would be on channel 11. They would also have no talk-aroundcapabilities on this system. A roll call would be conducted on channel10 and they should keep traffic to a minimum. They would need to staythere until the upgrade was complete.My question is: Where did they go? Did they switch, at leasttemporarily to the Phoenix system while they performed upgrades on theirown? I don't know of any other system that uses "deck" designations fortheir channel banks. Also, any idea as to what the upgrade was for? Iknow from listening that they have had problems since late last weekwith their MDC's and that messaging was either down or severely
> > > limitedsince last Friday. Was this upgrade for that? Also, what tg id's wouldbe used for this type of switch. I opened up the Phoenix system butsince I don't regularly scan or listen to it except for a limited numberof talkgroups, I haven't heard a peep out of anyone from Glendale. Ijust heard an officer call in the the regular channel but nobodyanswered him and I'm guessing that he accidentally used his car radioinstead of his portable because he hasn't come back on. They have beengone from their system for close to an hour now with no indication howlong this will last.Thanks for any help anyone can lend....John L.Glendale

Actually doesn't make sense, since vehicle radios ARE capable of interoperability? I hit the sack early and unfortunately missed the traffic you were hearing. As for the MDC's, . . if I had a nickle for every time I heard radio advise they were going down, ... :) Anyway, glad traffic is back to normal. Haven't heard from you in a while. How's are your Phx radios these days?

I know what you mean but there has been quite a bit of traffic this weekend about only certain aspects of the MDC's that wasn't working. I heard them try having all the officers log off and log back in, I heard them tell everyone to log off and stay off until further notice and then late last night they went to the next step and booted everyone off the system altogether. Also, I remember them saying that their officer alert buttons would not function on the new system which also leads me to believe that they vacated their home system at least temporarily. I haven't heard them say anything about the MDC's this morning yet but who knows?

> Haven't heard from you in a while. How's are your Phx radios these days?

Just been copying the mail here. Radios still suck but then that is normal now too. Still dead spots that nobody in power will even admit to their existence. You'll be driving along and all of a sudden the radio will come alive with a conversation that you can tell had been going on for a little bit before you became aware of it. Then you are answering your bosses questions as to why you didn't answer him when he called. I can't believe that the PD is still having these type of problems so I wonder why we are. We ARE using the same towers and such. It would also help if more than 2 or 3 drivers out of the 100+ knew what radio discipline was.

Gonna run and get a haircut but should be back in less than an hour.

Hey Dave,

While I think of it (forgot when I posted the reply to your last message), every message you send is coming in here in twos. The first time I thought maybe you just sent it twice because you thought it didn't go the first time but this reply arrived as two copies also.

Later!

John L

John, is it possible you heard "C deck" instead of "G"? Reason I ask is that our portables here at C.O.G. have A,B & C deck capability, with 16 channels per deck.

Now there are a couple of differences with this post from you. First, I only got the one copy. No dups.

Second, this message shows up with your name in the "Sender" field rather than your email address so I'm guessing you are using a different machine to reply.

Anyway, I copied that traffic also. Guess whatever the problem was last night either wasn't fixed or had nothing to do with the MDC's. Or they now have another problem to fix. Who knows!

I would need to go with the "maybe you heard "C Deck" thing as my handheld only has A,B,&C. I will ask the Sarg what was up if I think about it. Maybe he knows and then maybe I can send it on. Not everything he gives me the answer to can I pass on. Also, yes, there is nothing on my hand help that is not on my vehicle radio. It is just listed differently.

Dave – I suspect that your portable has a “switch” on the top that has A-B-C positions and a rotating knob that allows you to select modes 1-16, but that other controls on the portable allow you to change zones – and this would be where you get to the George zone. I suspect that this is the same G zone that is programmed on Phoenix handhelds. It appears to be unencrypted talk groups for use communicating with other agencies. You can see the full layout of the PPD talkgroups at Radio Reference …

It’s not uncommon for agencies to program each other’s systems in zones other than the 3 primary zones on the radios.

For example, there’s the common talkgroups in the H zone on Phoenix and Mesa systems that is also programmed as Special Detail 6 on county radios.

The ABC switch is just a convenient way to have the radio set on some mode, like A-5 and then flip the switch to B and end up on B-5, etc. If the radio starts on the A zone, then you think of the A setting on the switch as being the A zone. But the radio does not have to start on the A zone.

For example, the way the MCSO radios work is if the zone is changed from A to D, and the mode set to D-7, then flipping the switch to B would change to E-7, and to C would change to F-7.

In other words, A adds 0 to whatever zone/mode the other controls are set to, B adds 1 to the zone, and C adds 2 to the zone.

Glendale officers who work the stadium would have to have a way to get on the PRWN system to get to the stadium talkgroups – and more than likely put them on at least the portables, but not in the commonly-used zones A, B, or C.

I would need to go with the "maybe you heard "C Deck" thing as my handheld only has A,B,&C. I will ask the Sarg what was up if I think about it. Maybe he knows and then maybe I can send it on. Not everything he gives me the answer to can I pass on. Also, yes, there is nothing on my hand help that is not on my vehicle radio. It is just listed differently.

Thought they just used TG 1001 (Interop on GPD System) for the Stadium events with other agencies?

Or am I missing something?

Chris

Subject: RE: [ArizonaScanner.com] Glendale missing...

Dave - I suspect that your portable has a "switch" on the top that has A-B-C positions and a rotating knob that allows you to select modes 1-16, but that other controls on the portable allow you to change zones - and this would be where you get to the George zone. I suspect that this is the same G zone that is programmed on Phoenix handhelds. It appears to be unencrypted talk groups for use communicating with other agencies. You can see the full layout of the PPD talkgroups at Radio Reference .

It's not uncommon for agencies to program each other's systems in zones other than the 3 primary zones on the radios.

For example, there's the common talkgroups in the H zone on Phoenix and Mesa systems that is also programmed as Special Detail 6 on county radios.

Sorry, didn't realize you were talking about the EOC to EOC stuff on
APS's trunker.
So... that was State EOC doing their weekly comm check.
I used to be the designated person on Broadway Consumer, before that
network changed.
I no longer have equipment capable of operating on the new channels.
[No I can't give details]

I was quoting from the PRWN manual.
Each of quite a few dispatch/EOC's have a pair of control stations on
PRWN that allow various agencies to call each other and patch.
They run their comm checks 3 times a day.

13 and 14 are SE Valley. I've been off work sick since last week, but I
would suspect Chandler, Sun Lakes and Ahwatukee. Channel 8 should go back to

S. Phoenix as it was before being pressed into service in Chandler. Channel
15 is an event channel and is not even monitored in the Alarm Room.

Make sure the com port setting in RSS is properly set, been a while
but I think the software defaults to com1, this is the first thing to
try. You also must be in DOS, not a DOS window within windows.

Steve,

That was it. I got the Com port set to 1. But now new problem will not let me save keeps saying invalid file name or path given when trying to save code plug. Any ideals?

Make sure the com port setting in RSS is properly set, been a while but I think the software defaults to com1, this is the first thing to try. You also must be in DOS, not a DOS window within windows.Steve K2AUX--- In ArizonaScanner@yahoogroups.com, AAR9SM AAR9SM <aar9sm@...> wrote:>> > I have a Systems Saber 3 that i am trying to reprogram and getting the following error.> > (Serial bus communication error could not acquire busy line turn radio off try again)> > I am using and old 50 mhz or less IBM laptop. check the setup area for the paths. The ones that it fires up to are not normally what you will be using and thus need changed. I think it should be a F9 thing.

Seems like Ch14 is actually 154.130, sitting here listening to 6 different calls that went out in the last 10 minutes and not a peep on 154.430, I scanned around found them on 154.130. Ed, maybe you had 13 & 14 reversed in 14 being 154.130 and 13 is 154.430?

15229. Peoria Police new radio system?

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2008-09-27 19:05:30 UTC
From: Jim
Topic: 15229 Message: 15229

I read a while back about peoria planning on upgrading there radio system. I just came across a recent article that mentians it coming online in april.

Quoted:
"He added that a new radio communications system expected to come on line in April should allow Peoria police to communicate directly with other agencies, further enhancing collaborative efforts. Now, the department has to be patched through to connect with other agencies' systems, which takes time."

I am wondering if anyone knows anything more about this. What type of system, etc.

I just confirmed that 154.430 is Ch.13, Ladder 282 asked for a radio check on it after trying to reach Alarm on Ch6 and thinking they were on Ch14!

Let's rather hope that like PRWN it leaves some stuff NOT encrypted.

15234. Re: [ArizonaScanner.com] Re: PFD A13 and A14

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2008-09-28 23:24:47 UTC
From: Ed (K9EDK)
Topic: 15184 Message: 15234

I just returned to work today after being off sick for a little over a week. Don't go reprogramming your scanners just yet. There were some radios in the field that were programmed backwards (13 was 14 and vice-versa). Rather than try to identify the bad portables and reprogram them, the channels were swapped on the radios in the Alarm Room. I have not heard yet if the current configuration will remain or if the portables will all be reprogrammed to the original configuration followed by Alarm going back to the original configuration. Right now in the Alarm Room, the same person is operating 13 and 14 in case units come up on the wrong channel by accident.

Ed

15235. Tucson Ham Radio Fall Picnic

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2008-09-29 02:49:17 UTC
From: N7JND
Topic: 15235 Message: 15235

It's Ham Radio Picnic Time

The annual Tucson Ham Radio Fall Picnic is almost here. We would like to invite ALL Ham's and those interested in Ham Radio to join us on October 19th at 12 noon for a relaxing day in the park. The picnic will take place at Reid Park in the middle of Tucson.

This is a potluck style of picnic and you are invited to bring something to share. There is a potluck signup sheet at the official website. www.tucsonhampicnic.com

Last year we had 90+ folks show up and we had a great time. There will be great food, prizes, and all kinds of stuff to do. You may want to bring your own chairs.

Details about the picnic can be seen at www.tucsonhampicnic.com

Mark your calendars now and join us on this great event which is tradition to follow the day after the Tucson OPRC Hamfest.

Talk In - 146.52 simplex

Please help spread the word by forwarding this to all of your Ham buddies.

See ya at the picnic......

Chris - N7JND
Angie - N7EMB

No wonder they've been dispatching on 13 (the ACTUAL 14)
crazy stuff...

Look at the previous discussion on "PFD A13 and A14" especially my last post.

The frequencies are 154.430 and 154.130, PL 100

Has anyone in valley been doing the updates as they are released for the 396?

If so, what are your results?

Any major improvements when it comes to either tracking or receiving ?

Do you feel they have made this a better radio?

I am still using version 1.11.03 because it works pretty well for me.

Arizona is rich with military aviation communications. It would help to know your location and the frequencies you are monitoring.

Personally from my location in west Phoenix I usually listen to the folks out of Luke Air Force Base doing their daily fun run to the
range down by Gila Bend. Keep in mind that like most hard working American's they work on weekdays and not so much on
weekends or evenings.

For confirmed radio frequencies, check out the the Luke AFB page on my website at www.freqofnature.com. If you are in the
Tucson area, check the Davis-Monthan AFB page.

Luke AFB
http://www.freqofnature.com/index.php?m=Maricopa%20County&p=Luke%20AFB

Davis-Monthan AFB

It's Ham Radio Picnic Time
October 19th, 2008
Reid Park - Ramada #15

Please help spread the word. The Tucson Ham Radio Picnic is a success because you help in promoting it.

The annual Tucson Ham Radio Fall Picnic is almost here. We would like to invite ALL Ham's and those interested in Ham Radio to join us on October 19th at 12 noon for a relaxing day in the park. The picnic will take place at Reid Park in the middle of Tucson.

This is a Potluck style of picnic and you are invited to bring something to share. Please let us know if you are bringing something to share by clicking the Submit button in the Potluck section of the official website. This way you can instantly see what's already being brought. There is a potluck signup sheet at the official website.
www.tucsonhampicnic.com

Last year we had 90+ folks show up and we had a great time. There will be great food, prizes, and all kinds of stuff to door or just relax and enjoy. You may want to bring your own chairs.

Details about the picnic can be seen at www.tucsonhampicnic.com

Due to generous donations, we will have some great door prizes to give away. This is not a raffle. Each person that signs in, will receive a ticket. We will draw ticket numbers for door prizes at 2:30pm. You must be present to win a prize. There will also be special drawings for the kids also since this is a family event, we want the kids and whole family to feel welcome to the picnic. There are still door prizes coming in and they will be added to the list from now to the picnic. So, check the website often.

If you plan on setting up any type of DEMO station, let us know so that we can add it to the EVENTS list.

Mark your calendars now and join us on this great event which is tradition to follow the day after the Tucson OPRC Hamfest.

Talk In - 146.52 simplex

Please help spread the word by forwarding this to all of your Ham buddies.

See ya at the picnic......

They already encrypt tactical stuff.

The only thing we would miss if they follow the PRWN model is car to
car chatter. Not a big deal really. I am sure they will do something
along the lines of Phoenix or Glendale, and we should be happy.

15252. Re: [ArizonaScanner.com] Glendale PD Question

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2008-10-07 04:03:47 UTC
From: phoenixscanner1
Topic: 15179 Message: 15252

In case anyone thinks I am planning covert ops to take their tower out or something (rolls eyes), I have no ill intent. I want to know because I use a yagi antenna for 800mhz (to solve PRWN simulcast issues), and was just wondering where it was (approximate location is fine), so that I could see where that direction sits on the field strength pattern.

Tower locations aren't guarded secrets anyway, jeesh. All of the sites on PRWN are listed in radio reference.

Shaw Butte would make sense. I get a strong signal in North Phoenix, too strong for for the tower to be at the white tanks site.

15253. Glendale PD gets a helicopter

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2008-10-07 04:06:00 UTC
From: phoenixscanner1
Topic: 15253 Message: 15253

Has anyone else followed the any traffic on the GPD system with the new helicopter? The chopper goes by the "halo" designation and I heard a dispatcher telling an officer it is only part-time right now. The city is large enough to use a chopper so good going Glendale!

Does anyone know if they are borrowing a chopper from another agency?

15254. Re: [ArizonaScanner.com] Glendale PD gets a helicopter

Date: 2008-10-07 04:12:34 UTC
From: dave
Topic: 15253 Message: 15254

Halo 151 traffic is actually dispatched on the Phx Regional Fire Dispatch system, not an actual GPD helo. Sure would be nice though if the west side agencies could get together on a shared police helo. Until then, we'll continue to ask Phx for assistance.

Subject: [ArizonaScanner.com] Glendale PD gets a helicopter

Has anyone else followed the any traffic on the GPD system with the new helicopter? The chopper goes by the "halo" designation and I heard a dispatcher telling an officer it is only part-time right now. The city is large enough to use a chopper so good going Glendale!

Does anyone know if they are borrowing a chopper from another agency?

Halo 151 is an Air Evac helicopter manned by Air Evac and Fire Dept. personnel. Halo is contracted by a consortium of several West Valley communities and can be used for medical transport or recon. Halo 151 is also available for calls outside of the served cities. Halo 151 is co-dispatched by Phoenix RDC and Air Evac.

HALO 151 also provides a lower level of care than any other medical helicopter in the valley.
It is staffed with two paramedics where as all of the other medical helicopters (with the exception of Ranger) have a Nurse and Paramedic on board.

HALO is not accredited like the other helicopters in the area either.

Sadly, other cities that are not part of the consortium of contracted cities do get this helicopter.

Hopefully its not you or your loved on who get loaded on a helicopter with a lower level of care.

Glendale PD does rent a small helicopter from time to tiime that should not be confused with HALO.
It looks like an Engstrom. I believe the pilot is a civilian and I'm not sure who the observer is.

I saw it up over the Cardinals game this past Sunday

The use of the rented helo is for monitoring traffic during University of Phx games and is typically staffed with a regular Glendale officer as the observer. For assistance with perimeter searches, Glendale relies on Phoenix for assistance.

From: Doug
Topic: 15271 Message: 15271

Has anyone else been having trouble getting Luke AFB. System seems to have gone silent. At first, I thought it was because of the 396 update to the firmware. I checked all the frequencies, and was no longer able to get the control channel. So, I pulled out my old Radio Shack Pro-64 and manually entered the frequencies. Was unable to get a control channel. Granted, the Pro-64 doesn't trunk or pick up digital, but it still will pick up the "buzz" on the control channel. Neither radio picks up the CC.

Has there been a change to their system? Can anyone in the west valley confirm that the CC is still on the air?

It looks like Luke changed frequencies.

Here are the frequencies captured by Unitrunker that are in use this morning:

Base 406.000 Spacing 12.5khz Offset 380

407.3625
407.7625
407.9626
408.5625
408.7625
408.9625 control
409.3625
409.5625
410.1625

15275. PHOENIX FIRE FREQ QUESTION

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2008-10-12 00:24:17 UTC
From: SailSouth4Fun@aol.com
Topic: 15275 Message: 15275

I have been away from the scanner for a while. This
afternoon I heard a dispatch to channel 14. Is this a
Blue Deck frequency assignment or where are they
going. I do have the SFD. Could someone clue me in
on what's happening? If it's too strange to to figure
out from the book, could someone please give me the
new frequencies? Thanks for your help.

It's still not confirmed, but I think the current configuration is going to be the final configuration. B-deck channels are no longer utilized with the Phoenix RDC. Blue deck channels still exist when responding to places like Mesa, Gilbert or County.

15284. DPS medic killed

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2008-10-14 04:05:42 UTC
From: trunkh8er
Topic: 15284 Message: 15284

At approximately 4 P.M. this afternoon, a Department of Public Safety Medic was killed during the rescue of two stranded hikers near Bear Mountain in Sedona. The medic, who was on the ground, was apparently attempting to escort the hikers to an awaiting helicopter. One of the hikers was able to enter the helicopter safely. As the medic was guiding the second hiker towards the helicopter, he was struck by a rotor blade and killed. The second hiker was not injured and both were flown from the area to safety.

The recovery of the medic's body is currently underway as the investigation into this incident begins.

Like so many things, the answer is all about your location and what you want to listen to. In the Valley, Tempe is testing out 700 MHz frequencies in a trunking system. The PRO-96 and 2096 can't follow trunking at 700 MHz. Most other parts of the state - these scanners would do fine. Your location (and your pocketbook) dictate whether it's a good price or if you should wait.

Not specific to a cruise line but be sure to scan the VHF marine frequencies. That's how the ships communicate with each other and the ports. Google for the frequencies. Scanners like the Uniden 396 already have those frequencies set up in a search bank.

There is info posted in RadioReference that says it's on the PRWN
system. They talked about a couple talkgroups on Simulcast A.
http://www.radioreference.com/forums/showthread.php?t=117980

Here's a link to the system page at the same web site. The identified
talkgroups are buried in the middle of the talkgroups.

Can I have the PRWN frequencies please !!!

[Moderator's note: PRWN refers to the Phoenix Regional Wireless Network, a multi site, P25 Digital Trunked radio system. You'll need a scanner that has the digits '96' in the model number to receive it. Complete system information is at the below referenced webpage.]

I would expand that to 417-420, there been some hits in the 419mhz range, usually that means joint task force activity, which can occur in the 417's too.

I am selling a Radio Shack PRO 96 hand held scanner. I am asking $280 dollars. The scanner is in excellent condition and was rarely used.

What you get:
Scanner, yellow 2AA battery holder, belt clip, BNC antenna, programing cable, owners manual, and box.

Willing to meet in the Phoenix area. Please contact me off list if you have any questions or would like to see pictures. I have no software therefore I am unable to program the scanner.

Now for something less cryptic:

Fire affects county communications
Oct. 22, 2008 12:50 PM

12 News

A fire on White Tanks Mountain has affected county communications.
The fire happened at the county communications tower.

It is unknown how extensively any outage has hit county workers,
including Sheriff patrols.

Fire crews cut power to all the communication towers in the area of
the fire due to downed power lines.

Date: 2008-10-23 04:35:28 UTC
From: T. Weaver
Topic: 15313 Message: 15313

I have a Uniden BC396T scanner that I've rudimentarily programmed, but my current set up sucks.

I recall someone here having one, and I think we even discussed getting together for coffee and perhaps cloning it, or at least show me WTF I am doing wrong.

I can wrap my head around dynamic memory...easy enough. But how I've entered stuff is all jumbled, I think, and I can't figure out the quick keys to save my fucking life.

Basically, I'd be looking for help on actually using the quick-keys, programming "strategy" and some .mem files (or whatever they are) for Arizona.

I am in NW Phoenix/N Glendale. I'd be willing to buy someone lunch or a beer or some coffee to help me out.

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2008-10-23 17:39:19 UTC
From: T. Weaver
Topic: 15313 Message: 15316

The scanner works fine. I've got it set up for Glendale's P25 trunked system, and have MCSO's trunked system in it, too.

My problems are several:

I still can't figure out how to work the "quick keys", esp anything that is beyond the standard 1-9 designation.

Some of the systems I have in the scanner show up and I can't figure out why they've not been locked out like I tried to do.

It appears that with the dynamic memory, the strategic planning of systems/groups is more important than a standard scanner. For example, in a standard scanner, I might make bank 1 Glendale (trunk), Bank 2 NW Valley (having Peoria, GFD/PFD, appropriate SW Ambulance frequencies, Luke AFB, etc.), Bank 3 Freeways/DPS, etc.

It seems you can do this in dynamic, but can pile everything into a NW Valley group, including GPD and MCSO's trunked systems.

But then the confusion is that, what if I only want to listen to Glendale PD? Do I have "copy" of them as a separate system, then kill the NW valley group and "unlock" GPD's group?

It's that level of usage that's really boggling me. I've read the manual twice, and still don't get parts of it. It's much easier for me to learn by doing, or watching someone do. Manuals suck for me as a learning tool.

Does this make sense?

For Quick Keys higher than 9 press the . first. So if you want to access
Quick Key 14 you would press .14.

You're still thinking in "banks." You need to get out of that mindset or
you'll still be confused.

Everything is put into "systems" like you specified. More than one
system can be assigned to a Quick Key.

> It seems you can do this in dynamic, but can pile everything into a NW
> Valley group, including GPD and MCSO's trunked systems.

You can arrange things however you want. It might be good to figure out
on paper how you want things organized ahead of time. Are you using the
software to program it or are you doing it through the scanner's
interface? The software makes it much easier.

>
> But then the confusion is that, what if I only want to listen to
> Glendale PD? Do I have "copy" of them as a separate system, then kill
> the NW valley group and "unlock" GPD's group?

The easiest thing here would be to ave the Glendale PD assigned to its
own Quick Key. That way you could disable all of the other Quick Keys
and just listen to the Glendale PD by having only its Quick Key enabled.
Once again, since you know that you might want to do this, it helps to

sketch out on paper how you want systems organized into Quick Keys. I think the manual even has pages in the back for you to do this.

>
>

Why don't you list what you want to scan here and maybe we could suggest some layouts for the Quick Keys?

By the way, you don't have to assign a system to a Quick Key at all. It will still get scanned after any of the other systems assigned to Quick Keys.

I was able to get the QK thing mostly understood, and now "see" what's happening when I press the "." key. Part of it I think was not remembering exactly what systems I'd programmed to what QKs. Doh!

I am using ARC396, and "pulled in" most of the frequencies from Radioreference when I bought a short-term membership.

Anyway, what I'd like to do is this:

Scan Glendale PD, with the ability to scan much of the rest of the NW Valley (Phoenix), including Fire/EMS, Peoria PD/FD, MCSO and DPS. This is where I got the concept of a "NW Valley" bucket of systems. Since I scan Glendale mostly, that's one reason why I'd consider keeping it separate.

Also, Fire and EMS interest me marginally, so I really don't want to hear all the dispatch traffic (which I believe Fire does, then breaks it down to local tactical channels), so that one might be tough. Is this where the concept of using the two-tone, er, tones that fire dispatch uses for higher priority calls?

I would then like to be able to scan in various areas, depending on where I am. For example, if I travel to Gilbert, I'd like to be able to pick up DPS (for my drive over), and Tempe/Mesa/Chandler/Gilbert PD.

Separate all this, I'd like to have PD and DPS helos, Luke AFB air channels, and the Goldwater range stuff. Additionally, fed LE traffic is interesting at times, so this would be good. Local Mall security traffic, etc. Basically, public safety. I am not really interested in the APS, DOT or other stuff, apart from it sometimes being used for infrequent LE traffic when they don't want to use standard channels (or so I've been led to believe).

Does this make sense? Am I overlooking something obvious?

Thanks again, everyone, for all your patience.

OK, I think I've got a handle on system-level QKs, which is a GREAT first step. Thanks to Dave for your assistance!!

Now, to re-think my programming set-up, and whether to add group-level QKs within the system, and THEN figure out how to use those. Since I have a good feeling on the system-level ones, I think I can get that!!

Thanks to everyone for their patience with me.. :)

There still seems to be a lot of confusion about the frequencies assigned to Phoenix Fire Channels 13 and 14. Both channels seem to have 100.00 MHz CTCSS squelch codes. The frequencies deployed seem to be 154.4300 and 154.1300. The confusion centers around which of these frequencies are officially assigned to the two specific channels, PFD Ch13 and PFD Ch14, which are intended to cover the Southeast area of the valley and originate from the old Blue Deck Chandler assigned frequencies.

Correction here, TX CTCSS squelch codes are measured in Hz, not MHz as originally posted.

It seems that the current alignment will stick. .43 is 13 and .13 is 14.
Both have a 100Hz tone. Channel 15 will remain unaffected by this change.
I'm told the tone on 15 is 100Hz, but have not yet been able to verify.

15330. How do you do a "reverse lookup" on a frequency?

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2008-10-25 05:30:35 UTC
From: T. Weaver
Topic: 15330 Message: 15330

I was listening to my Pro-43, and the frequency of 464.4250 popped up.
It sounded like some sort of security or parole office by the talk,
as they were discussing some kids who apparently are known taggers.
They discussed being at/in front of some homes, so I don't think it's
a mall security.

How does one go about looking these up? I have the 9th Ed. of SW
Frequency Directory, but didn't see a way to do this.

??

Thanks,
Tim Weaver

I did an Arizona only search for FCC licences for 464.4250 using Radio Reference. It returned:

http://www.radioreference.com/apps/db/?stcd=AZ&freq=464.4250&action=sf

You may need a subscription to access the above url.

The search returned about 50 hits for Arizona.

Looks like this might be it...I live within that radius of Arrowhead Mall. It was just that the discussion on the radio didn't sound anything like mall security traffic...it's been a while (like 20 years), but I used to work mall security in California, and it wasn't anything like that....especially the reference to being "back at the house."

I'll have to listen some more....

From: Dean
Topic: 15334 Message: 15334

Im trying to listen to the Phoenix PD P25 system with my BC396 or PSR500.
I live in the southeast valley and as Im sure others can relate, Im having a problem receiving all the transmissions.

The 500 seems to receive a bit better, but Im still missing
a significant portion of the transmissions.

I currently use an RS multi band disconne scanner antenna, Im wondering if I might improve my reception by using an 800 mhz beam antenna on my roof.

Before I buy one, has anyone tried this, or have any thoughts or suggestions on this ?

Thanks
Dean

A 800 MHz beam would make a world of difference in reception. I am sure others will chime in. Anytime you get a band specific antenna you should see major improvements. If you purchase one keep moving it around to find your best reception or better yet put it on a rotor.

Phoenix has several sites around the valley so before you buy anything go to radioreference.com find the area closes to you and program that specific site control channels.

I live in central PHX and had a RS disconne, but it did not do well at picking up PHX PD (to garbly do to conflict of picking up multi sites at the same time). I bought a Yagi ($100) off the internet and installed a rotor on the pole. I pointed it in the direction of one of the south mountain sites.There is now perfect reception with no garble. I don't know if a rotor is nessesary. You could just manually turn it until you get good reception.

Yagi is the best way to go!

Dean,

I am pulling my hair out trying to monitor in the southeast valley using Uniden BCD396T with the latest V3 firmware update. The previous versions were no better. I have tried multiple antennas to no avail. I have adjusted P25 waiting times, P25 levels (auto and manual), etc., and still the reception is spotty. The scanner would work great for a few hours, and then go deaf. No rhyme or reason. I went as far as sending the scanner back to Uniden to have them look at it again. No difference.

I would love to hear a good working solution for those listening in the Southeast Valley.

Dean and John,

What are each of you calling southeast valley? Which towers or
sites and which Departments and talkgroups are you trying to listen
to? It's not a simple single tower site system and without knowing
more details people won't know how to answer.

Hello everyone, I just picked up a Pro 96... might as well call it new!!
mint cond.

I have the programming cable. does anyone know where to get the software?

Can you get it free off a website or is this something you have to buy.....
If I in fact have to buy. Any one know how much? and is it worth it?

Jeff,

It is free for 30 days $30.00 to buy for lifetime use and free updates. In my opinion it is the only way to program the Pro-96 plus it allows to to open up the 96 so you can listen to mil air check the extended freq box.

Was watching the Ch 5 news out of Phx a little while ago and they had a bit about a task force and some arrests in Phx. They also had a shot of an officer logging something. In front of the log was a scanner, and if I didn't know better, I would have sworn it was a Pro 95.
Any one else see this broadcast?

15344. Re: Phoenix P25 Reception - Problem Solved!

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2008-10-28 05:39:55 UTC
From: John
Topic: 15334 Message: 15344

I can't tell you how much time and energy I've spent trying to get this to work. After posting the first msg yesterday, I decided to give it another shot.

When I bought the radio pre-loaded from ScannerMaster, I had ALL the frequencies for PRWN loaded - there are 101 frequencies including all the control channels and the alternates, etc. What I did last night was to create a new System (APCO P25) and reloaded the TG designators for Mesa and Gilbert. I entered only Site 202 and 301 frequencies, which were only 24. For whatever reason, I am now able to receive Mesa PD, Mesa/Gilbert Fire, and Gilbert PD!!! Been enjoying it all day long today. I could not believe it. I am using a rubber duck 800 MHz antenna with an SMA mount - nothing fancy. I do experience some motorboating, but it's not bad at all. Finally!!! Can't tell you how excited I am about this outcome.

I am using P25 level in Manual Mode set at 7. Hold Time of 0, Delay Time of 1, and P25 Waiting Time of 400ms (not that it matters). Modulation is Auto (although it works in NFM or FM).

Hope this helps those trying to scan Mesa / Gilbert, AZ.

Sounds like my story. The rotor would be the nicest way to go. But if you can figure out how to angle the yagi so that the nearest site is getting good reception and the other nearby sites are getting attenuated as much as possible, you are good to go. Just look at the field pattern graph that comes with the yagi, and you will see what I mean.

You may not be pointed RIGHT AT the nearest tower, but maybe offset a bit, so that you have MAXIMUM attenuation of the other nearby sites. You just want one site getting through, as much as possible. It is the ONLY answer for those in between multiple simulcast towers. It took me a few years to figure this out, but thank God I did. I get about 90% of everything now, and it was MUCH MUCH worse before. Unlistenable without my yagi.

15346. Phoenix PD Scanner Use

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2008-10-29 04:17:07 UTC
From: phoenixscanner1
Topic: 15346 Message: 15346

An open question. What use would a scanner be to a PPD officer? Who can name a few possible reasons for a PPD officer having one handy?

A captain might want one to hear traffic from all the C decs.

A supervisor might want to be able to monitor another agency if he was coordinating with them.

Can anyone else think of good reasons why?

Topic: 15334 Message: 15347

Glad to hear it . but you need enter ONLY the 4 control channel frequencies for each site (shown in red and blue on the radio reference site). The others are totally ignored by the radio (i.e., it always operates in control-channel-only mode for APCO P25 sites like PRWN).

I hope you know that site 202 is the airport/tempe area site used primarily for Phoenix talk groups .. I'd be surprised if you found many Gilbert/Mesa talkgroups active on it, although with the system design, it's certainly possible. But even if you didn't monitor it and some Gilbert unit started using it, it's more than likely that that same talkgroup would be carried by the 301 system too, so you wouldn't miss the transmission. The only time you would have to monitor it would be when you had two or more gilbert/mesa using 202 and NOBODY affiliated with that talk group on 301.

I see this on the Maricopa county system quite a bit. Thompson Peak carries all the major LEO talk groups but doesn't carry un-affiliated talkgroups designated for Car to Car . so when two units on the west side of town go to C/C, I miss it, and would have to be scanning the tower they're using to get them.

My point is: if you're just interested in Mesa/Gilbert/AJ traffic, scanning 202 is a waste of time, especially if you're ID scanning and your talk groups never come active on 202 - you've just wasted the time it takes to look at the site, and you'd be better of staying with just 301.

Or, if you want to hear stuff on 202, ID Scan the Phoenix and Sky Harbor talk groups.

Tempe PD has switched over ot the 700 mhz site, does anyone know how to program a BCD 396t, Im having trouble programing them... i can hear them when i enter the freq., but having trouble hearing they when i set to scan or search... I remember having this problem with PRWN when phx first went digital... and i cant seem to remember how i programed it for that system.. please let me know what info you have ... thanks... ANDREW

Programming from the radio:
Press Menu Button
Select Program System
Scroll up one space (bottom of list)
Select New System
Select MOT
Select P25
Confirm Press E(yes)
Select Set Frequencies
Select New Frequency
Type 771.91875 and press E
Press Menu Button
Scroll down and Select New Frequency
Type 774.41875 and press E
Press Scan and you now have the new system programmed and scanning.

Programming can also be done from the Uniden software. If you can figure out how to set up the system in the software, then do the steps above, and read the system from the software. You can them make customizations and program talkgroups.

Cheers,

Joe

Andrew,

One more addition, make sure you are monitoring the system in "ID
Search" mode. I you monitor in "ID Scan" mode you will not hear
anything unless you program the new talkgroups.

I believe you're hearing radio techs checking out the system. They've been doing that for at least a month. I've heard a few other TGs, but nothing that soinds like a dispatcher or any Public Safety units.

2600's are what I'm seeing so far.

On talkgroup 2601 an officer was just reporting that he could not transmit
at all while in the area Rio Salado and McClintock. Not a good thing...

No Dan, its live...Unless there simulcasting the old system over it,
OR,unless they dispatch Radio Techs on calls now :-)

You're right on at least part of it. I don't know about the simulcast, but sure 'nuff today (a few hours after I sent the mail) I heard live Tempe traffic on 2601 and 2603 .. and something kept keying up on 2619 but I never heard any audio for it. Very nice, crisp audio on the others though ... will make them a pleasure to listen to - cuz the old analog system was scratchy

Sorry for doubting you. :-)

Topic: 15334 Message: 15358

Hi,
thanks everyone for your replies on this.
I went ahead and bought a 6 element yagi off ebay for 30.00 bucks.
not sure of the gain, but hopefully it will do the trick.

I'll mount it and rotate it as im listening to Phx PD. for the
best results.

I live near the san tan & Gilbert rd, so Im guessing
the Tempe site will be the best one to try to receive from.

Thanks again everyone.

Dean

Sounds like my story. The rotor would be the nicest way to go. But if
you can figure out how to angle the yagi so that the nearest site is
getting good reception and the other nearby sites are getting
attenuated as much as possible, you are good to go. Just look at the
field pattern graph that comes with the yagi, and you will see what I
mean.

You may not be pointed RIGHT AT the nearest tower, but maybe offset a
bit, so that you have MAXIMUM attenuation of the other nearby sites.
You just want one site getting through, as much as possible. It is the
ONLY answer for those in between multiple simulcast towers. It took me
a few years to figure this out, but thank God I did. I get about 90%
of everything now, and it was MUCH MUCH worse before. Unlistenable
without my yagi.

2603 seems to be south side, and I'm not sure about 2601. 2604 is encrypted and 2619 seems to be a data channel. I can't wait til I can put some tags on the talkgroups.

Their old 800 MHz system is silent. I had the frequencies wrong to start with and was hearing nothing on 700 or 800, then I found the problem and 700 is working fine now. At least as fine as P25 can work.

Ed

15360. Tempe PD switches.....

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2008-10-31 10:49:41 UTC
From: --==ANDREW==--
Topic: 15360 Message: 15360

Hope this helps you guys... i was there helping out when they switch took place... Tempe has a very nice Radio Room.... or should i say Communications Center

Tempe MaintControl Channels 771.91874 & 774.41875
Alternate Control Channels 773.16875 & 774.16875

2079 - Tempe Maint
2093 - Tempe Parks
2601 - Ch A - PD North
2602 - Ch B - PD Info Channel
2603 - Ch C - PD South
2604
2607
2610 - Encrypted
2612 - Encrypted
2619 - Encrypted
2631 - Encrypted
2635 - Encrypted
2637

HOPE THIS HELPS....   LESI Andrew

15361. Tempe PD 700 Mhz System

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2008-10-31 14:29:35 UTC
From: Gastón Mascareñas
Topic: 15361 Message: 15361

Here is my 2-cents worth. I'll be doing more extensive monitoring today, but here's what I've got so far.

Talk Groups 2601-2603, 2619-2622, 2624, 2634, and 2637 are NOT encrypted

2604-2618, 2629-2633, and 2635-2636 are encrypted

2623, and 2625-2628 are not profiled (don't know if encrypted or not). These are probably unassigned at the moment.

Radios apparently have at least 3 "decks" of 16 channels, called A, B, and C. For channel labels, it sounds like they are maintaining the letter designations from the old system for consistency.

The A-deck seems to be the normal police stuff. The C-deck appears to be events and interoperability stuff. Park Rangers are probably there too. The B-deck is probably for CID, SAU, narcs, and gangs and likely to be all encrypted.

The assignment of talkgroups to "channels" seems to be somewhat scrambled.

A2 TG 2601 is used as A - North
A4 TG 2603 is used as C - South
A5 TG 2637 is unknown use
A6 TG 2624 is unknown use
A9 TG 2621 is unknown use

A1 is possibly TG 2607 which is encrypted

B9 TG 2620 is unknown use
B15 TG 2634 is unknown use

C5 TG 2622 is unknown use
C7 TG 2080 is L - City Services/Tempe PD Link
C9 TG 2619 is Event 4, currently being used for auto testing

Cordially yours,

Gaston

Cool! I'm a transplant from Boscawen, just north of Concord.

You'll need a trunking scanner to get Glendale PD and a digital trunked scanner to get PRWN (Phoenix Regional Wireless Network). Fire departments are still VHF conventional.

Good frequency information at radioreference.com

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2008-11-01 07:22:54 UTC
From: jgbdps
Topic: 15361 Message: 15366

Hello Everyone,

I'll try to clarify some of this Tempe PD stuff for everyone. One thing that I do not have are talk group numbers and what they are assigned to. The way the system is laid out is as follows.
A1 HOT 1...B1 HOT 2...C1 HOT 3 (We are not using hot channels at this time but they will be encrypted)
A2 North...B2 Info...C2 Talk 1 (B2 and C2 are encrypted)
A3 Central...B3 Info...C3 Talk 2(B3 and C3 are encrypted)
A4 South...B4 Info...C4 Talk 3 (B4 and B5 are encrypted)

Listed above are the talk groups that have the most activity.

A5 Mill Ave, A6 Security, A9 PD Event 2, B9 PD Event 3, C9 PD Event 4, C5 PD Event 1, C7 PW Emergency, C11 SIB and B15 Tech Center are the other talk groups that are not encrypted. There are various talk groups i.e. INFO, NARCS, SIB, GANGS, and SWAT, that will remain encrypted.

The City is broken up into North and South and the dividing line is Broadway Rd, hence the North and South. In the future the city will be divided up by North, Central, and South. So most of the activity is A2 North and A3 South.

Something new that were are doing is the hot tone beep every 15 seconds(approximate) like DPS does when there is emergency traffic on the channel/frequency. I like this feature a lot and was not available to us on the old analog system.

The coverage on the new system is phenomenal. Communications on my portable radio has been crystal clear and it has not gone "digital" on me yet. Officers and dispatchers are having to repeat themselves often, but I believe its from everyone not being used to the way digital sounds.

On the XTS5000, we use the toggle switch to switch between A, B and C, and the dial for 1, 2, 3..etc.

I hope this helps out with the programing.

From: Doug
Topic: 15368 Message: 15368

I live on the west side of Phoenix (43rd Ave) and since Tempe made the switch, I can no longer pick them up. I've tried manually entering the control channel frequencies, but it just won't reach out this way.

At least with the old system, scratchy as it was, I could still hear them over on my end of town.

Hope those of you in the Tempe area enjoy the new system. For me, guess I'll just free up the memory for something else.

RATS!!!!

From: jgbdps
Topic: 15361 Message: 15371

Here are a few questions people brought up, that I will try to answer.

"Will there be an announcement group like Chandler PD's "Hot" that is used to announce a hot call or normal call turning hot to everyone (for swarming purposes and awareness)? If so, what is the TG and channel designator?"
---As of right now when a hot call comes out it is broadcast on North, South and our Info Channels, where officers spend most of their time. Once the initial broadcast comes out over the different channels, the hot traffic is the isolated to North or South depending if it is north or south Tempe. In the future officers will "10-50" or switch to A1 Hot for the traffic. We do not have enough dispatchers to staff the Hot channels.

"What is A6 Security used for? VIP protection or things like football games?"
---The security channels is for the "rent a cops" AKA Team Security who work in the downtown area. (Sorry if I offended anyone)Any VIP security work, I can guarantee will be encrypted.

"In PW Emergency, is the PW Public Works or something else?"
---That's a good question. That sounds about right.

"Is B15 Tech Center radio technicians or something else like crime scene technicians?"
---The Tech Center is our radio shop.

"When the city is broken-up into three precincts, what will the new boundaries be?"
---These boundaries are still in the works, but from what I hear, its going to be all of north Tempe to Broadway RD as North. Central is from Broadway down to US 60 or Baseline Rd. South is from US60/Baseline to the Chandler border.

"Are you still using a TG for AZ Mills security or is that A6?"
---On the old system we never used a separate TG for the Mall. We usually have a mall officer who has a simple analog radio which is owned by the mall. The mall has its own repeater and dispatch. The Mall Officer is on A4 South and the two call signs I am aware of is 2G20 and 2P20.

"Are Park Rangers on your system? If so, what is their channel?"
---Park Rangers call sign start with "F" i.e. F807, and are on the main channels respective if they are north or south.

"Do you have school emergency channels? Are these encrypted? If not, what are the channels/TG's?"

---There are no school emergency channels. There are SRO at the high schools and they are the North/South TG depending on the location of the school. If the shit were to hit the fan, it is easier to stay on the main channel or hot channel where everyone is all ready at.

The City has way more TG's than it needs. There are a ton more frequencies that I don't have info on because only the SWAT guys have it programed into their radio.

I live in an apartment, no balcony, so I really can't use anything
except the antenna on the scanner. I do have the RS 800 antenna, but
it just isn't enough. I just live in a bad area. Still have trouble
with PHX PD, but it's better with the new V3.01 Maybe I should find
a new place to live.....maybe a high rise apartment.

Thanks for the tip, anyway

Doug,

If you have attic put a Yagi in it or put a small pole on the balcony and put the antenna there.

Topic: 15368 Message: 15377

While I lived in an apartment that was effectively
a Faraday cage I had good results hanging a yagi
from my bedroom's ceiling. A couple of zero damage
pieces of foam tape held the strings holding the yagi.
It was unsightly but it worked.

A friend of mine has had good luck in her apartment
by putting a Radio Shack mag mount scanner antenna
on a baking sheet on a high shelf. However she lives
in a concrete block building not the chicken wire and
stucco monstrosity I lived in. You couldn't get better
RF attenuation if you designed it that way.

I live in an apartment, no balcony, so I really can't use anything

except the antenna on the scanner. I do have the RS 800 antenna, but

it just isn't enough. I just live in a bad area. Still have trouble

with PHX PD, but it's better with the new V3.01 Maybe I should find

a new place to live.....maybe a high rise apartment.

Thanks for the tip, anyway

Check out http://www.radioreference.com if you don't want to buy any
books.

Places where the scanner stops but you don't here anything could be a
"birdie" in your scanner. It could also be a data channel that doesn't
have any audible data noise to hear.

The calls sound like west valley locations, but it seems a stronger signal around 32nd and Greenway area.

Can you hear this station?

Is it a point-to-point feed, or another SW Ambulance regular channel?

What is it's current channel and designation? When I logged this
repeater a while ago, it simply relayed Rural Metro on 154.370 MHz.

Now it seems to be only dispatches directed to the far east valley.

How well do you hear it across the valley?

Bad news I'm afraid, the Pro-96 and it's brother the 2096 cannot follow trunked 700MHz systems. You can unblock the 700 MHz portion of these scanners and listen to disjointed conversations by scanning the frequencies conventionally. You would need to use the WIN96 software for this, there is no way to do it using the keypad.

There are newer scanners that do 700MHz fine. There was a conversation about this a while back.

On the setting tab (first tab) in WIN96 there is a checkbox for extended frequencies. Checking that then allows the scanner to be programmed with the 700MHz frequencies. Again, this will not enable the scanner to follow a trunked conversation in the 700MHz band but may be (slightly) better than nothing.

Hi

I wanted to let anyone who is interested know that the 6 element 800 mhz Yagi I bought is a hit !!! I put it im my attic (HOA) out here in Gilbert & now Im getting 100% of the Phoenix PD transmissions !!! Huge improvement !!!

The only thing that threw me was when I was pointing it in various directions, for the best results, I found it actually worked better when the antenna is horizontal. For some reason I inititally assumed it should be vertical ??

Sounds like my story. The rotor would be the nicest way to go. But if
you can figure out how to angle the yagi so that the nearest site is
getting good reception and the other nearby sites are getting
attenuated as much as possible, you are good to go. Just look at the
field pattern graph that comes with the yagi, and you will see what I
mean.

You may not be pointed RIGHT AT the nearest tower, but maybe offset a
bit, so that you have MAXIMUM attenuation of the other nearby sites.
You just want one site getting through, as much as possible. It is the
ONLY answer for those in between multiple simulcast towers. It took me
a few years to figure this out, but thank God I did. I get about 90%
of everything now, and it was MUCH MUCH worse before. Unlistenable
without my yagi.

Like I mentioned previously, you won't be able to completely monitor
that system because the Radio Shack scanners won't trunk-track in the
700 MHz band. You could normally scan through the frequncies to hear
the voice channels but you won't be able to track by talkgroup.

15398. Uniden 396 and 996 P25 Decode Performance Improvement

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2008-11-08 17:54:00 UTC
From: Gastón Mascareñas
Topic: 15398 Message: 15398

Hi Ye.

I discovered something that has significantly improved the P25 decode performance of both my Uniden 396 and 996 radios. When I was watching the P25 threshold display, I noticed that while in the AUTO mode, the level it was fluctuating almost wildly across a very broad range. This means that the automatic adjustment was not converging on a single value or at least a narrow range of numbers. I figured that this accounted for the choppiness in decode that I was experiencing, especially when mobile. The P25 performance that I have been getting has been poor since the last firmware update. I suspect that something got munged when they "improved" their algorithms.

I observed that although the value was erratic, a certain number came up more often. Sometimes it was a narrow range of numbers that came-up more often. So I changed the mode from AUTO to MANUAL, set the level to the "average" observed, and the radio performed much, much better. I did a lot of testing while walking about and in my car and am happy to report that the P25 radio performance is now almost as good as analog.

By the by, I didn't see this erraticness when listening to the Maricopa Cty system so I left the settings for this system on AUTO.

You may want to try this out. It's worth doing if you see the same kind of erraticness on the systems you listen to. To do so, use the following steps. They are written for the 396 using the Tempe (Phoenix Regional Wireless Cooperative Simulcast F) as an example.

With the radio scanning Tempe do the following:

1. While holding down the FUNCTION switch on the left side, push the knob in twice to get to the screen that shows you the P25 thresholds.

2. On the line with the word "AUTO", observe the values of the number to the left of "AUTO" as they vary to see what a good average point is for that system. It will probably be somewhere between 7-9.

3. While holding down the FUNCTION switch on the left side, push the knob in thrice to get to the screen back to normal.

4. Go to PROGRAM SYSTEM for Tempe
5. Select EDIT SYS OPTION
6. Select ADJUST P25 LEVEL
7. Set to MANUAL.

Then with the radio scanning Tempe do the following:

8. While holding down the FUNCTION switch on the left side, push the knob in twice to get to the screen that shows you the thresholds.

9. Adjust to desire value by holding down FUNCTION and rotating knob.

10. While holding down the FUNCTION switch on the left side, push the knob in thrice to get to the screen back to normal.

Voila, you're good to go. You should notice a dramatic improvement, especially when you're mobile.

The procedure for the 996 is similar, except that mode is set at the site level, not the system level.

Cordially yours,

Gaston

I thought the trunking was a function of the data received. How would the radio know whether it was on a 800 or 700 channel? Are the 700 systems using a different trunking scheme?

Not exactly sure what you don't understand here. "Because it won't" is the answer that you received is correct and no ammount of trying to second guess the response you got is not going to magicaly make it work for you. When the PRO-96 and PRO-2096 were designed there were no 700MHz trunked systems. That is the most reasonable answer as to why they didn't design it to work there. There are no 26 MHz trunked systems either, and guess what? The PRO-96 and PRO-2096 won't work with trunking systems in that frequency range either.

Even if the trunking is a function of the data received, which in some cases it is and some it isn't, the software inside the scanner has to know what to do with the data it is receiving. Remarkably, you can take a 96 or 2096 and run PRO96COMM and use the 96/2096 as the data channel receive radio and PRO96COMM interprets what it is hearing on a 700MHz channel and displays it on a computer screen and can command a Uniden digital receiver to go to those frequencies and listen to the system. You can't do that with the PRO-96 or PRO-2096 as the voice receiver on ANY frequency because they were not designed to be computer controlled. Same reason you can't use a Uniden receiver with PRO96COMM since the Uniden receivers were not designed to work with that software.

Subject: [ArizonaScanner.com] Uniden 396 and 996 P25 Decode Performance Improvement

Hi Ye.

I discovered something that has significantly improved the P25 decode performance of both my Uniden 396 and 996 radios. When I was watching the P25 threshold display, I noticed that while in the AUTO mode, the level it was fluctuating almost wildly across a very broad range. This means that the automatic adjustment was not converging on a single value or at least a narrow range of numbers. I figured that this accounted for the choppiness in decode that I was experiencing, especially when mobile. The P25 performance that I have been getting has been poor since the last firmware update. I suspect that something got munged when they "improved" their algorithms.

I observed that although the value was erratic, a certain number came up more often. Sometimes it was a narrow range of numbers that came-up more often. So I changed the mode from AUTO to MANUAL, set the level to the "average" observed, and the radio performed much, much better. I did a lot of testing while walking about and in my car and am happy to report that the P25 radio performance is now almost as good as analog.

By the by, I didn't see this erraticness when listening to the Maricopa Cty system so I left the settings for this system on AUTO.

You may want to try this out. It's worth doing if you see the same kind of erraticness on the systems you listen to. To do so, use the following steps. They are written for the 396 using the Tempe (Phoenix Regional Wireless Cooperative Simulcast F) as an example.

With the radio scanning Tempe do the following:

1. While holding down the FUNCTION switch on the left side, push the knob in twice to get to the screen that shows you the P25 thresholds.

2. On the line with the word "AUTO", observe the values of the number to the left of "AUTO" as they vary to see what a good average point is for that system. It will probably be somewhere between 7-9.

3. While holding down the FUNCTION switch on the left side, push the knob in thrice to get to the screen back to normal.

4. Go to PROGRAM SYSTEM for Tempe
5. Select EDIT SYS OPTION
6. Select ADJUST P25 LEVEL
7. Set to MANUAL.

Then with the radio scanning Tempe do the following:

8. While holding down the FUNCTION switch on the left side, push the knob in twice to get to the screen that shows you the thresholds.

9. Adjust to desire value by holding down FUNCTION and rotating knob.

10. While holding down the FUNCTION switch on the left side, push the knob in thrice to get to the screen back to normal.

Voila, you're good to go. You should notice a dramatic improvement, especially when you're mobile.

The procedure for the 996 is similar, except that mode is set at the site level, not the system level.

Cordially yours,

Gaston

Gastón,

There is a newer version of the Uniden Firmware, 3.01.00, that addresses a problem with the algorithm default for P25 decoding that was discovered in version 3.00.00. If you apply the corrective update 3.01.00, you might very well find the performance you are looking for.

Mike

Gaston,

You are correct about the ☐Hold☐ key work-around in BCD396T Firmware version 3.00.00. There were references to other enhancements and fixes in the release notes for BCD396T Firmware version 3.01.00 so I am recommending BCD396T users to apply the 3.01.00 Firmware update even if they know about the workaround for version 3.00.00.

By the way, thank you very much for your invaluable information about the new Tempe P25 system. I am now able to monitor their non-encrypted talk groups where I otherwise would not have been able to without your contributions.

Thanks.

Mike

Anyone have any idea what the AIR to GROUND freqs are for Horizon
Airlines and Great Lakes Airlines at the Prescott Airport?

Thanks ahead of time!

Bill

Thta's correct Jeff HORIZON does not operate into PHX. The only airport they operate in Arizona is Prescott and Flagstaff.

Thanks

Hi Bill,

Give these frequencies a try. These are all licensed for airline inbound frequencies for Prescott airport. The bottom three are listed as cancelled, but sometimes the FCC rules aren't always followed so these might be still used.

129.300
129.400 - Cancelled
131.050 - Cancelled
131.325 - Cancelled

Let us know what you find.

I'll give those freqs a try Joe. 131.050 was used by MESA AIRLINES at PRESCOTT prior to their money problems and dropping service at PRESCOTT last summer.

Thanks

Bill H.

Mike that frequency was used by MESA AIRLINES prior to them ending services at PRESCOTT. I just wonder if that radio and frequency is still in use at the PRESCOTT TERMINAL.

From: Robert Homuth
Topic: 15424 Message: 15424

The repeater has a PL of 107.2 and might be "Channel 15".

It's strong from my location near 32nd Street and Greenway, as well as near Metro Center.

Is this for Pinal or Maricopa County?

And, what is it supposed to be used for? In the past, it was parallel to Rural Metro Dispatch on 154.370 MHz.

Do a google search for technician ham license. Another good source is to go to QRZ.com and look at their free online tests on the lefthand side of the screen. So easy my friends wife can do it.

15432. Re: Definitive Talkgroups for PRWC F Site 205 (Tempe)

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2008-11-13 18:26:13 UTC
From: Dan Danz
Topic: 15422 Message: 15432

I have a slight correction to make:

A10 PD Event 5 TG 2618 appears to be encrypted.

However, the encryption can be turned on and off at will for any channel, so the E/D designation is only advisory.

My suggestion is that you enter all of the Talkgroups in your radio, but LockOut the ones marked E. They will still identify correctly as being active when you hold on the control channel, but you won't be bothered with even the initial squawk from an encrypted channel.

And, if you keep the list handy, when you hear somebody say for example, "Go to A16", you'll quickly understand why you it would be futile to listen.

Some of you asked privately about the apparent duplicated Info talk groups even in the same bank (zone). Let me explain, here, for those who didn't ask but want to know anyway.

To understand why this appears this way, you once again have to stop thinking like a scanner user and think about the radio users. They have a switch on the top of the portables (or a a similar button on the car radio) to switch between Zones while retaining the numeric portion. Thus A02 PD North -> B02 (Info 1) is just a simple change that can be done without looking at the radio. Well, the Action Team folks on A07 need to be able to get to their info easily. They've apparently been also assigned to Info 1 so A07 -> B07 gets Info 1. The same for SEU A11 -> B11 gets Info 1; However, Narcotics A12 -> B12 and Gangs A13->B13 both end up on Info 3.

It helps to arrange the A/B/C lists side by side; then you can see it more clearly. The same goes for getting to the Talk (or car to car as some agencies call them) in the C zone. Again, a simple two clicks of the switch. Talk TGs typically don't have a dispatcher assigned to them. Event TGs may or may not have a dispatcher.

Operationally, I also see Info 2 and Info 3 patched a lot because they're being handled on the same console. The same goes for Mill Ave Info ... it's frequently patched to Info 3 and Info 2.

It's something you've seen already on the Phoenix hot channels -- e.g., 500 and 700 hot is handled by the same operator, and you're going to see it more and more in the future as departments look to maximizing the ease of use for the radio users while keeping the complicated stuff for the dispatchers. Unfortunately, it means what they "call" the channel over the air might be quite different than

the nominal talkgroup that's selected for the transmission. Unfortunately your scanner only knows it by TGID. So you sometimes have to listen to TG's that you don't always care about.

By the way -- there's a whole bunch of City of Tempe talk groups on this system, that I don't care to monitor and have not bothered to figure them out. I know that some of the 2070 series is public works, traffic lights, etc. just from hearing the chit chat on them. Somebody else will have to step up and provide the identification of those talkgroups.

And one reminder: these are all part of the Regional Wireless ?? Consortium?? - whatever the C in RWC stands for. So ANY talkgroup can appear on here; don't get lulled into thinking of this site as strictly Tempe.

Thanks for the info. There's a post on radio reference that has a link to a newspaper article where it's called the Regional Wireless Cooperative by a city of Phoenix person and another post also on RR where a city of Suprise person refers to it by the same name.

Guessing PRWN is maybe going to change it's name.

By the way, is Suprise and El Mirage back on the County system or still borrowing talkgroups on PRWN, ahem - RWC??

From: Brian Romine
Topic: 15409 Message: 15441

What everyone should know is that the Air-to-Ground / Ground-to-Air (what ever you wish to refer to them as) frequencies are controlled by a company ASRI (www.asri.aero) on behalf of the FCC and the NTIA. Also even though Mesa Airlines had been using that frequency at Prescott, no airline has any one aeronautical frequency as a "private" frequency. The aeronautical band is really more crowded than most people may realize.

Queen Creek is not Rural Metro. They've had their own Fire Dept. for nearly a year now and is dispatched by Mesa Fire on their frequencies. Arizona Farms and the surrounding County areas are still serviced by Rural Metro, or should I say that they're still charged for services by Rural Metro. Gilbert, Queen Creek and Chandler frequently provide services to the County Islands.

15445. whos on the old buckeye fd channel 154.830?

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2008-11-19 02:40:05 UTC
From: lucky85382
Topic: 15445 Message: 15445

i havent listend to my scaner much lately and i heard talk of I-10 so
is this still the fd channel or police it sounded more like DPS talking

15446. Malls

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2008-11-19 16:28:52 UTC
From: azkid2002
Topic: 15446 Message: 15446

Getting close to that time of year again, activity should pick up at area malls. I have been unable to find the frequency for Superstition Springs Mall security. Does anyone know what it is?

Thanks

15447. Coconino County Sheriff Live feed

From: Chad
Topic: 15447 Message: 15447

I have added another feed to the flagscanner.com website.

The feed is of the Coconino County Sheriff's department. All
frequencies are being scanned as well as their Search and rescue coms.

I got these from my contact at the airport:

131.325 Great Lakes Airlines
129.300 Horizon Air

I confirmed 131.325 after hearing inbound and outbound flight last night; they also talk to Phoenix on the same freq. Not heard anyone on 129.3 yet.

For stores in the malls, and drive-through windows at fast food
eateries, try these common business frequencies:

151.955
154.515
154.540
154.570
154.600

464.550/469.550
464.500/469.500

And, every 12.5 kHz from:

467.750 to 467.925 MHz

If you also search in the 12.5 kHz spaces between the UHF business
frequencies:

469.0125 469.0375 469.0625...and so on, as examples, you will find a
lot of low power two-way radios in use.

Check out the Family Radio Service and GMRS frequencies, too!

Keep us posted what you hear! When I hiked up Lookout Mountain in
Phoenix, 16th Street south of Greenway Parkway, I could hear store,
mall and restaurant comms for miles on most of those above frequencies.

15452. MD-500 type helo doing touch and go's at Glendale PD

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2008-11-21 02:16:39 UTC
From: John H. Guetherman
Topic: 15452 Message: 15452

One day last week, and again today I saw a blue and grey MD-500 type helo landing on the Glendale PD parking garage/heliport. It'd sit there for about 2 minutes, take off west bound, do a clockwise orbit and land again. Then they'd repeat this several times.

I couldn't see any markings on it, and couldn't see a tail number.

Anyone got a clue as to who the helo belongs to and/or why they're doing the touch-and-go's?

(It was not the "NOTAR" type that Phoenix PD used. It had a normal tail rotor and a T-type tail.)

I also noted today that Glendale PD was doing dispatcher training on their talkgroup 1001. (I recently purchased the GRE handheld scanner and had it programmed at HRO. That talkgroup is labeled Interagency.)

TG 1001 is Ch 14. They've also been utilizing Ch 15 (TG 321)
& Ch 16 (TG323) for training. The MD-500 has been utilized
to assist in traffic control for the stadium & arena traffic.

I would assume that is correct and i appoligize;i was not aware that queen creek has established there own fire dept.if its rural metro operating the fire dept simaliar to what they once did in scottsdale;more than likely they are operating on there standard frequency base;if queen creek has truly established there own fire dept;and managed soley by themselves;then they probably are operating on a frequency unknown to me;I do know that prettymuch all of the valley;is on the automatic aide system;so a good place to look would be Phoenix fire or mesa fire frequency index.mesa is now digital,butt they are still intermittenly simulcasting on vhf 154.3400 F1 and 154.235 F2. i,ve noticed that phoenix fire is doing the same thing.I would think;that you should beable to find what your looking for in one of these three places or all 3..Out of curiousity;I am going to research this.

Queen Creek is not Rural Metro. They've had their own Fire Dept. for nearly
a year now and is dispatched by Mesa Fire on their frequencies. Arizona
Farms and the surrounding County areas are still serviced by Rural Metro, or
should I say that they're still charged for services by Rural Metro.
Gilbert, Queen Creek and Chandler frequently provide services to the County
Islands.

All of the malls are not the same here is what I have.

Fiesta Mall
464.9375 Security
461.7750 Operations

Superstition Springs
451.9500
452.7500
463.7375
468.7375
Unknown what is for what.

Chandler Fashion Center
Uses some kind of a trunked radio system here are the frequencies
don't know what type of system but this is what there license shows.
451.5625, 451.6125, & 452.8875

Mesa FD dispatches for Mesa, Gilbert, Apache Junction and Queen Creek.
Mesa's 800 MHz is patched into their old VHF channels. Phoenix FD has not
made the switch to 800 MHz yet, but their VHF stuff is patched through to
the PRWN radios.

Rural Metro is still operating on the same frequencies.

Date: 2008-11-26 19:10:37 UTC
From: Ric Marshall
Topic: 15462 Message: 15462

i found the talk groups for the light rail.
they are on the phoenix system A
tg 1401 and 1404 so far.
they are doing a lot of testing so it is very
active. OCC is the base call sign.
they are doing testing during the daylight
and evening hours. they are using the train
numbers for there call signs.

15463. PRWN Talkgroup 2847

This was one of three talkgroups that were noticed in use by Suprise
and El Mirage after Maricopa County had their fire on White Tanks.
That was a while back already now though. Here's a Radio Reference
thread that has that conversation, fifth message mentions 2847 along
with 3225 and 3226.

http://www.radioreference.com/forums/showthread.php?t=122623&highlight=2847

Searching Radio Reference further back I found that talkgroup listed
among talkgroups (including 3225) that were active during the superbowl.

Some sort of multi-use talkgroup?

15465. [ArizonaScanner.com] Re: Phoenix P25 Reception

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2008-11-29 06:16:51 UTC
From: phoenixscanner1
Topic: 15334 Message: 15465

Congrats! Glad to hear the yagi solved yet another PPD reception issue. It seems to work almost every time it is tried. As far as you having it setup for horizontal polarization, that is surprising, as the broadcast antennas are vertically polarized.

But I have found that radio "science" like computer "science" often lends itself to "unique" solutions. Sometimes just "tinkering around" with things will yield the best result. What counts is that it works for you and you are getting great reception. Awesome...

Either way, for those of you who have laid down $500 on a digital scanner and are suffering through crappy PRWN reception, why would you not lay down another $70 or so and get the right antenna, so you hear everything? And yeah, most other things (oddly enough) still come through just fine as well. I use my yagi over 90% of the time even when monitoring VHF and UHF stuff. It works fine for all but fringe reception. That is where I click my diamond antenna switch over to the old radio shack "sputnik" antenna for that stuff.

15466. Digital frequencies

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2008-11-30 18:12:40 UTC
From: Paul Sieger
Topic: 15466 Message: 15466

I just purchased the pro-106 digital trunking scanner. The downloads from radioshack are showing Mesa's and Pnx PD's scanner frequencies to be 155.0100 or 150.1900. I know both of these agencies are on the 800Mhz digital trunking system. Can anyone provide me with the correct frequencies or where I can find them. Thanks.

15476. Prescott Area Fire Tone Out

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2008-12-02 20:07:11 UTC
From: John
Topic: 15476 Message: 15476

Up here in the Prescott area, I've been playing with my 396 Fire Tone Out feature. I managed to find the following by using TwoTone Detect and trial and error:

Prescott Area daytime use: Tone A-553.9, Tone B-330.5
(Different tones for each station after 2100 - Chino uses different tones than PFD/CYFD)

Life Line Ambulance Tone A-0, Tone B-600.9
(This appears to have 2 tones, but Tone A seems to be buried in the PL tone.)

Does anyone have access to the other pager tones for CYFD, PFD, CVFD, etc.

Subject: [ArizonaScanner.com] Longwave Listening Mini DXpedition

Went to Lookout Mountain, south of Greenway Parkway and 16th Street. My rig is a Sangean ATS505 with a Quantum Stick medium wave and long wave ferrite loop. As soon as I walked up Trail #308, away from the houses below, static and interference dropped enough for me to log SOMETHING on longwave! Since the park opens at sunrise, and longwave DX peaks at that same time, I will go back later on to DX.

Even though my radio covers only the 151-285 and 520-530 kHz part of the aeronautical non-directional beacon band, I did log the following...

"AVQ" on 245 kHz from Marana was easy armchair copy, even without a BFO. Seems like the Sangean rig only allows the BFO to operate above 1711 kHz. Copy and paste:

32.4118375/-111.2155864

on to Google Maps to see the Marana beacon.

"FFZ" on 281 kHz was also strong from Falcon Field, Mesa. Most of the long wave band sung with a chord of closely spaced carriers from power line telemetry. Find a satellite view with Google Maps by pasting and copying the following latitude and longitude:

33.4618814/-111.7330869

Thanks to www.airnav.com and Google Maps, I can actually see the antenna and transmitter shed. Back in 1986, I got up every morning, and logged pages of NDB, but had to go to the library, and dig through a bunch of government publications to find data. Now, it's just mouse over and clicking! Before, I had to deduce the address, draw a prepared QSL card, and hope the technicians had time to answer my request. Half the time, they didn't respond, to my disappointment, but not surprise. I still have a book of prepared beacon QSL cards including some local ones, like SDL, Scottsdale Air Park, and PQO, Sky Harbor, that went QRT years ago in favor of more modern methods of aeronautical navigation aids.

Have you done any longwave non-directional beacon listening?

Jeff, they are phasing them out, but there are still thousands out their. The application for navigation is practically gone but they use them in many other ways. For instance. I worked on one in IN that was one mile from the runway threshold. The purpose was as soon as the pilot on final approach past over the NDB he could drop down to continue his final approach. The beacon was located where high tension wires were. Just a note to let some of you know one of the unusual uses of the NDB.

Some of them are of course still being used. for the IFR ticket you no longer have to do a NDB approach!!

GPS approaches now out number ILS approaches!!

KSDL NDB (244) has been down for a few years now.

I don't know about KFFZ.. or CHD.

Jeff, they are phasing them out, but there are still thousands out their. The application for navigation is practically gone but they use them in many other ways. For instance. I worked on one in IN that was one mile from the runway threshold. The purpose was as soon as the pilot on final approach past over the NDB he could drop down to continue his final approach. The beacon was located where high tension wires were. Just a note to let some of you know one of the unusual uses of the NDB.

Robert, NDB's are being fazed out... (Not being repaired when they go down.) also I think in 2012 they will no longer support VOR's (as they go down they will not repair.)

Went to Lookout Mountain, south of Greenway Parkway and 16th Street. My rig is a Sangean ATS505 with a Quantum Stick medium wave and long wave ferrite loop. As soon as I walked up Trail #308, away from the houses below, static and interference dropped enough for me to log SOMETHING on longwave! Since the park opens at sunrise, and longwave DX peaks at that same time, I will go back later on to DX.

Even though my radio covers only the 151-285 and 520-530 kHz part of the aeronautical non-directional beacon band, I did log the following...

"AVQ" on 245 kHz from Marana was easy armchair copy, even without a BFO. Seems like the Sangean rig only allows the BFO to operate above 1711 kHz. Copy and paste:

32.4118375/-111.2155864

on to Google Maps to see the Marana beacon.

"FFZ" on 281 kHz was also strong from Falcon Field, Mesa. Most of the long wave band sung with a chord of closely spaced carriers from power line telemetry. Find a satellite view with Google Maps by pasting and copying the following latitude and longitude:

33.4618814/-111.7330869

Thanks to www.airnav.com and Google Maps, I can actually see the antenna and transmitter shed. Back in 1986, I got up every morning, and logged pages of NDB, but had to go to the library, and dig through a bunch of government publications to find data. Now, it's just mouse

over and clicking! Before, I had to deduce the address, draw a prepared QSL card, and hope the technicians had time to answer my request. Half the time, they didn't respond, to my disappointment, but not surprise. I still have a book of prepared beacon QSL cards including some local ones, like SDL, Scottsdale Air Park, and PQO, Sky Harbor, that went QRT years ago in favor of more modern methods of aeronautical navigation aids.

Have you done any longwave non-directional beacon listening?

Hi Robert,

Spun the dials on my Yaesu FRG100 last night and got:

0853 UTC 4 Dec 2008

404 MOG Montague, CA
406 YLJ Meadow Lake, SK
414 RPB Belleville, KS
521 INE Missoula-Konna, MT

Lots more beacons received but didn't log them - just went for the
easy ones :)

Looked like a pretty good night for LF DXing.

I realized after I posted this, I was on the WRONG Yahoo Group! It's still pretty noisy at my apartment, so all I can get are the Marana and Falcon Field NDB's. I did get some QSL cards from many now QRT radio beacons. I agree that they are old technology, and the operators will phase them out -- so there's no time like right now in the middle of winter, during a solar minimum to pick them up. I have some QSL cards from "PQO" ex-326 kHz, Sky Harbor Airport, as well as "SDL" ex-224 kHz, Scottsdale in my collection, as well as a book of other beacon QSL cards. One nice letter was from "EP", 374 kHz, Estevan Point, BC, Canada. Commander Alfie Yipp sent me a stack of books on the Canadian Coast Guard, as well as a detailed four page letter thanking me for the reception report.

Missoula, Montana was my first NDB reception many years ago. I had no idea why anyone wanted to send "INE" in Morse Code down on 521 kHz, until I read an article in Monitoring Times about beacons. I then used an old toy multiband transceiver that transmitted and received 49.860 MHz AM, and could receive the AM broadcast band, and 27 MHz CB. My antenna was an Intensitronics SelectATenna.

From: Joe Badura
Topic: 15487 Message: 15494

The alt control channels would be a good submission for Radio Reference, but this is not your problem. The current control channel is 774.41875 and this CC has not changed in about 1 month.

I will repeat a post that I made in the past. This is what you need to do program the scanner for the Tempe 700mhz system. If you follow these instructions and you are in range of the system, it should work:

Programming from the radio:
Press Menu Button
Select Program System
Scroll up one space (bottom of list)
Select New System
Select MOT
Select P25
Confirm Press E(yes)
Select Set Frequencies
Select New Frequency
Type 771.91875 and press E
Press Menu Button
Scroll down and Select New Frequency
Type 774.41875 and press E
Press Menu Button
Scroll down and Select New Frequency
Type 773.16875 and press E
Press Menu Button
Scroll down and Select New Frequency
Type 774.16875 and press E
Press Scan and you now have the new system programmed and scanning.

Logged 2000 watt "GLS" from Galveston, Texas. They have a big tower antenna overlooking the Gulf of Mexico -- great for transmit. The 206 kHz signal was easy copy after 0500Z. Too much noise and intermod at the apartment to hear anyone else.

if you have a scanner that scans longwave then it has everything to do with scanning. scanning is not limited to just first responders. i have a couple of scanners that scan nearly everything broadcasted.

15503. BC898T Any freqs left to scan?

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2008-12-15 14:41:35 UTC
From: bduck06
Topic: 15503 Message: 15503

Good Morning,
I have an 898T and was wondering if there is anything left to scan in the Tempe area, I am only looking for Fire, paramedic, no PD, and nothing fancy, I am trying to set it up for a friend of mine who works in security and figured there has to be a few analog freqs that are still useful out there.
I have been looking on the web, but only finding Trunked info, great for my 396 but not the 898.
Thank you in advance.

From: Ed (K9EDK)
Topic: 15503 Message: 15505

For about another year, Fire Dept. can be heard on VHF. 154.19 for dispatch and Tempe tactical is channel 7 at 154.145 and backup on channel 8 at 153.77. Phoenix FD dispatches for Tempe and several other surrounding communities, so 154.19 will allow you to hear more than just Tempe.

Tempe PD is on 700 MHz trucked/digital.

Mesa FD still simulcasts their 800 MHz on their old VHF frequencies. 154.34, 154.235 and 153.95, channels 1, 2 and 3

Mesa PD is on 800 MHz trunked/digital.

That's about all the public safety stuff you can listen to.

15506. PSR500 vs PRO 106

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2008-12-16 14:20:48 UTC
From: John Gallagher
Topic: 15506 Message: 15506

I'm interested in getting a new digital scanner and like to know what is the difference between the PSR500 and Pro106.

Which one is better and why. and will either also receive Military frequencies?

any help will be much appreciated.

thanks John

John,

They both pick up MilAir and are basicaly the same scanner. Here is a link so that you can compare them for youself. Remember though that the Pro-106 is on sale at $399.00 but the 106 you will have to buy the software and a programming cable if you need computer programming. I am not sure on the PSR500.

You'll find the Mall Patrol units officially on Special Detail 4 - an analog trunk group on the county radio system, with one of the MCSO dispatchers monitoring them. The detail at each mall is a sworn deputy supervising the posse folks to make it legal. The chitchat on search/simplex happens anytime the units have the radios to do it with, mall patrol or regular patrol. Since they're a lot cheaper than the trunking radios, lots of possemen have VHF radios. It pays to alwaysbackpack monitor 159.09 .. Because you can tell how close they are when they are simplex.

On a side note, I have a question regarding the 26th/27th public day to ride the train for free:

I have heard that you'll need a "Ticket" (Free of course) to ride the train. Some radio stations are giving them out thru contests.
Anybody know the bottom line on this? I tried looking around the light rail website, but no mention of it.

Thanks

There may be some special rides with special celebrities or something that they're giving out tickets to, but the train is free from Dec. 27-31 for everyone. There are activities at several stops along the route on the 27th and 28th that may not be free, but it's my understanding the rides are free.

I have a like new Uniden 396 for sale.
Figured I'd offer it up locally first.
Willing to listen to any reasonable offer.
Comes with Scanner, Antenna, A/C Power Cable, Uniden D/C Power Cord,
Extra programming cable, and belt clip.
Scanner works great and does not have one scratch on it.

If interested please contact me via email.

Thanks!

Mike Todd

Several law enforcement agencies in Southern California broadcast
radio calls to be on the lookout for Santa Claus during Christmas Eve.
Is this a tradition for Arizona law enforcement too? If so, which ones
typically do this?

Here's an example from Orange County:

http://www.freqofna ture.com/ sounds/santa- alert.wav

Thanks,

Tracy

15528. Chandler PD

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2008-12-25 03:45:19 UTC
From: John
Topic: 3893 Message: 15528

Has anyone else noticed the problems CPD has been having with their radio system? I have logged many TG ID's, but guess most are glitches since they fall outside of the 16000 - 19000 range. The exception is TG 18992, with tones only; all others have no audio.

John

Phoenix operates on 14 different frequencies.
You can find them in the Southwest Frequency Directory or
RadioReference.com

Currently they are still on VHF, with a cross-patch to the RWC
(formerly PRWIN) trunked radio system
Their main dispatch frequency is 154.190

Merry Christmas!

The City of Chandler also uses the system for public works , one of the items they used to use was to broadcast data to devices throughout the city, I think it was sprinkler systems , lights at ballparks etc. so it may be TG's used for those purposes

The holiday East Valley DUI Task Force won't be going on after January 1st. New Year's Eve is the last night...but as it's been said, check G-Deck-11 or Tempe's old Traffic channel. They should be patched together for all of the east valley agencies aside from MCSO. That has historically been worked on Lakes-1.

I certainly have, I noticed the signal strength was down a few months ago, but that seems to be rectified, but now the audio from the units in the field is horrible, scratchy, spotty,
and a noticeable hum in every transmission, again, only on the units in the field, dispatch is fine.

Units were using the Lakes-1 channel as well as Search 8 (159.090) for the search and rescue. The vehicle was actually found off of Seven Springs Road just past the ranger station. The gentleman was found around 8 a.m. after spending the night warm and cozy at the ranch and hiking back to his vehicle. Basically he was out quail hunting with his dogs when the clouds started rolling in. They ended up obscuring the mountains to the point where he couldn't determine his location.

A while ago I ended up getting in contact with the City of Chandler's radio technician when I was trying to figure out some of the talkgroups I was hearing on their system. He sent me back a spreadsheet with the talkgroups and make a comment to the effect that soon they would be switching to a system that a scanner couldn't monitor. I took that to mean that they were joining the Phoenix Regional Wireless Network and he wasn't aware that scanners could monitor that P25 system. He could have also meant that they were switching to an Open Sky protocol (which no scanner can track, that I know of). I hadn't heard anything about a frequency change though. Could that have something to do with the Nextel rebanding?

It would make sense if Chandler they joined the PRWN, I've heard
nothing of a new system, and you know that would have made news

I'm sure he was well aware of P25 scanners being able to monitor the
unencrypted parts of the system, but might not have thought you know
as much as you do.

Would you post that list of talkgoups for all to view, that would be
pretty cool!

You might have something their.i know just about every vally agency is joining the prwn in one form or another;i would be inclined to think;they would be joining prwn;butt who knows;they might be going to a seperate system with a link to prwn;i don,t know if you,ve ever snagged onto the morning rollcall on prwn;and she contacts every vally agency;including gila river;which they seem to stay encrypted or silent;and tempe;which we know what the situation is there.I guess time will tell.If anyone else out there has any input.!!!

There wasn't really anything on the spreadsheet that wasn't on Radio Reference or the Southwest Frequency Directory. This was several years ago and I think I tracked down the radio technician because I was seeing new talkgroups being used. When those talkgroups weren't on his spreadsheet and I asked a follow-up question about the missing talkgroups, I got no reply.

Years? That would qualify for a while ago!

Back to the Chandler issue, I hear units doing 27's 28's and 29's obviously on the mobile, and when in a spotty area, they sound terrible, scratchy and the ever present hum, I'm thinking the mobiles are at least 25 watts, that being said, I would not want to be a in a foot pursuit with an obviously impaired radio system carrying a 5 watt portable that all anyone hears is a hum. Hopefully central hears them clean and not like the repeated signal.

Yes, being in a car or on foot without being able to communicate to others is a huge safety risk. Seems that both mobile (car based) and portable (walkies) are having a tough time communicating. Dispatch is able to get through to units, but that only results in one way radio. They (PD and Public Works) have been requested to call in on their cell phones because the radio system is "having problems". I have heard the radio techs working on many different TG's doing their 5-4-3-2-1-1-2-3-4-5 tests. One bright side is that now I know my computer is not the only one that fails from time to time.At least the FD is not having any issues with their VHF radios (maybe newer is not always better).

On Saturday night, early Sunday morning, 12-28-08..... I was monitoring one channel of the task force on Talkgroup: 3222 Heard Chandler, Phoenix & Tempe.

I'm sure there are other talkgroups, but 3222 is the only one I've found so far. Take a listen. I heard three arrest made from this command post.

From: joescholz
Topic: 15565 Message: 15565

Does the 396 have a smart charge built in? That is, does it shut off charging after say 16 hours? If not I will charge the batteries externally and place the scanner in alkaline mode.

Thanks,

Joe

It does not have a smart charger built in to it. It simply has a timer like you said. A smart charger would not charge the batteries if they are already charged and only charges them the amount of time necessary to get them to full capacity.

It is advertised as digital, and my friend said it does digital trunking, just not sure how reliable, the bands seem to be really stingy. They are getting rid of these to bring in the rat shack versions of the BCD996T and the BCD396T, but I prefer my REAL Uniden BCD996T nothing I have seen on the market to compare until they make one for Florida that decodes SLERS (FHP..etc..)

Does the 396 have a smart charge built in? That is, does it shut off
charging after say 16 hours? If not I will charge the batteries
externally and place the scanner in alkaline mode.

Thanks,

Joe

The 396 has the worst internal battery charger I've ever seen! Its slow and seems to fry batteries! I suggest using an external battery charger.

HRO has a great battery charger that cycles and conditions your batteries.

Got one for Christmas and love it!

My bad Walter. I didn't scroll far enough down at their website and thought you were referring to the 246T handheld for $250. They do in fact show their Pro 2096 desktop/mobile unit for the same price and it is digital. I agree on the Uniden 996. The GRE units are exceptional as well!

Tempe is on the PRWN, Simulcast F
http://www.radioreference.com/apps/db/?sid=2508

Is PHz Simulcast shorthand for Phoenix (Phx?) Simulcast system?

In any event, although the Pro96 and 2096 scanners can be set up to scan 700 frequencies, they will NOT follow trunked systems/talkgroups that use 700MHz frequencies.

15585. Railroad Timetable

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2009-01-01 01:11:20 UTC
From: Robert R.
Topic: 15585 Message: 15585

Does anyone have a copy of a railroad timetable (preferably the one put out by Altamony Press) for Arizona in a PDF format that can be sent by email? If not AZ I'll take the Phoenix Metro Area. Thank You

Robert in Phoenix

15586. Can of worms

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2009-01-01 02:15:28 UTC
From: John
Topic: 15586 Message: 15586

After reading the manuals for the BCD996T (996) and the GRE PSR-600 (600), I am debating which one to buy. The 996 has GPS, faster scan rate, and more freqs covered, while the 600 has the 5 way cursor control, soft keys, and the multi color LED alert light. Currently I do not plan to mount the scanner in my truck, but who knows. I am leaning towards the 600, but would like to hear from those that own either (or both) of these units that also use PC software to program them.

I will want to monitor PHX, Mesa, Tempe, Gilbert, and Chandler PD's & FD's, MCSO, civilian and military air (including Luke's 400 MHz system).

I realize that everyone has their own opinion, and that this list is not for flame throwing, so feel free to write to me directly at johnphx711@... . FYI: I own multiple RS and Uniden scanners (conv and Trunk) but with the P25 digital and the recent move of some agencies to the 700 MHz band, I know I need a new scanner [good thing I do not have a wife to b*tch about it :D).

TIA,
John

John,

Depending on your location to luke you might want to consider the 600 to me the 996 and the 396 are kind of deaf on UHF. Where as the 600 may be more likely to overload though. I am sure others will ring in.

73

Happy New YearAAR9SM

Standing on my soapbox for a moment:

My english teacher would roll over in her grave if she ever knew I was writing this since I barely passed her class. The first word of a sentence is capitalized, there are two spaces after a period, one after a comma. Typing in all caps is screaming (I will not read), and no caps or punctuation results in me writing you off.

Stepping off my soap box now, and putting on my Nomex suit.

John,
 You left out the part about all proper nouns should be capitalized also. Like English in some instances. One the other hand I sometimes time with one hand as it is faster and that shoots hitting the caps key. I won't type all caps unless I mean it. And I will sometimes leave out the ' so I will read other mail with same problems. Don't forget some of the old typewriters for PD reports were caps only and least that's how the reports came out. I have asked several people about this and they had an eye problem so they wrote in caps so that they could read it.

Thanks for the information. However I am curious as to the internal chargers schedule. Does the timer start when you plug in the AC adapter, when it detects batteries have been inserted, or whenever it gets in the mood the charge them?

Thanks,

Joe

Ken;

To make things easier for the rest of us to read and follow, could you
please use the 'ENTER' key instead of the semi-colon to separate parts of
your thoughts.

It also looks like you've confused the comma [,] with the apostrophe ['].

Hello to all

I need help programming my radioshack pro-2055 [for] the
trunking freq for Phoenix pd and other pd's.

I see the fd and highway patrol are not on trunking .

This scanner is for my daughter and son in-law to listen to when they move to Arizona.

Please help a fellow scanner buff out.

Someone else please correct me if I'm wrong - unfortunately, I don't think the Pro-2055 will follow the digital P25 trunking systems used by Phoenix, Mesa, and Glendale PD.

Anyone have a current list of which scanners will work?

From: T. Weaver
Topic: 15606 Message: 15606

For Sale in N. Glendale:

Uniden BCD396T

Like-new condition Uniden BCD396T seeks new home. I just don't listen to scanners anymore. I bought this new from Grove Enterprises. Comes with Scanner, Antenna, A/C Power Cable, programming cable, and belt clip. I have the original box, but can't locate the manual (which is available online). Firmware upgraded to the latest version.

Programmed with a mish-mash of Phoenix-area frequencies, along with some out-of-state stuff. No rechargeable batteries (I don't have an external charger and read horror stories about the internal charger, so I just used alkalines or had it plugged in).

$400 firm + $10 if shipping is required. (I am in North Glendale). Cash or Postal Money Order only (I am not set up for PayPal). Please contact me directly at weavert@....

ok, i entered all the fbi, atf frequencies and the dea which i imported in from the ARC 96 sotware which gets the frequencies from the radio ref room. Once the frequencies were uploaded I unpluged the cable that you use for uploading. when the scanner restarts it goes through the banks and scans. well when it comes to scan the bank that I have all the fed frequencies in it won't go any further the line that shows under the banks that shows that the scanner is scanning just sits there and blinks as if the scanner is stuck. What I did was i switched banks to see if it was a bank problem or a frequency problem. It is not a bank problem. it locks on the bank and the line or + sign which shows that the bank is open or close will just sit there and blink. If I take out all the fbi and the atf frequencies the bank works. So I don't know if i have a bad frequency in the bank or what. Thats why I am asking everyone if they monitor these frequencies what frequencies are you listening to, The DEA frequencies work fine.Thomas BillmanU.S.F.S. Try to reset your scanner. The procedure should be in the manual. You
will probably have to reprogram the scanner though.

Now that Thomas has posted the below frequencies, can anyone updated any that are old? Or if someone can provide any verified and updated Federal frequencies that are confirmed especially ones that have been active recently. I think most of us are familiar with the 418.XXXX. So lets see what we can come up with.

Robert,

I am sorry i do not. Someone in the group must have a Pro-2055 file he can use?

Have you tried the software that is out there that would make it a breeze for you?

Here is a 30 day trial software you cane use and it works excellent.

http://www.starrsoft.com/software/win97/default.asp

Then go to radioreference.com copy and paste the systems you want.

http://www.radioreference.com/apps/db/?ctid=100

15621. Spectrum Force Wideband Antenna

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2009-01-11 15:33:58 UTC
From: bduck06
Topic: 15621 Message: 15621

Hello all.

Just a quick note regarding this antenna from Scanner Master,

I figured for 20 bucks, why not? I'm always looking for a good deal. When I got the antenna the first thing that got my attention was the very small magnet mount. But I figured I'll give it a shot, so the next day on my way to work I threw it on the highest point on the car and secured it inside the vehicle and closed window to make sure that if it didnt hold that I wouldn't watch it flying down the road, (or have the fastest antenna on the US 60.)

I picked up everything from Gilbert PD to DPS to Phoenix and Tempe PD as well as AZ Mills security when I went by. It also preformed equally well when I used it inside my office at work in the ceiling tile grid.

I drove 65 - 75 Mph and the antenna didn't budge.

Get this antenna, its small enough that you will take it with you and gets great results. and you can't beat the price. I plan to get another one just to have at work.

15622. Scottsdale moving to 700 Mhz?

Yahoo group: ArizonaScanner (2007 — 2012)

From: Doug
Topic: 15622 Message: 15622

I found this link for new FCC license for the city of Scottsdale.
They say it will be for data, but some of it shows that it will be
licensed for the police.

http://gmitch86.home.comcast.net/~gmitch86/grants_az.htm

The license info is about 1/2 way down the page.

I wonder if Scottsdale is going to abandon the MSCO system and link up
with the Phoenix network.

I have several of an antenna that looks just like those that I bought
last year at the Dayton Hamvention. They do work well. I think I got
them for $10.00 each at Dayton, and I have two of them on my Scion xA
and I use tqo of them at home with just a simple ground plane made from
bent coat hangers and then y all work well.

http://www.radioreference.com is the best website to go to.

If you'd like to have a book the 10th edition of the Southwest Frequency Directory will be out soon (see http://www.arizonascanner.com).

Most everything here is trunked and some is digital trunked. I'm sure the Pro-89 won't handle the digital trunking but I'm not sure about the conventional trunking.

Is anybody familiar with the Yuma area? I listened to my scanner a lot about ten years ago. I got busy and didn't use it for a long time. Now I am on a job in Yuma and I have time in the evening. I listen to the air traffic at the airport, but that's about all.

From the posts I read on this group it sounds like communications have changed a lot in the last several years. Is there anything I can listen to with an old school scanner? Anything in Mexico? I'm real close to the border. I used to know it all, but I'm really lost now.

Thanks.

The Pro-89 does not track trunked systems. In the east Mesa area, you can listen to Mesa Fire Dispatch, Rural Metro Fire Dispatch, DPS. All the PD's in the area are trunked, if not P-25. My advice is to save your pennies and buy a P-25 capable scanner.

Like John mentioned earlier you can get Fire, DPS some Federal stuff. Maybe you should let us know what types of listening interest you have.

The majority of Public Safety in Maricopa County is now digital and at a minimum analog trunking which you do not have that covered either. You just missed the $299.00 digital scanner sale at Radio shack.

You could look around and find a cheap analog trunk tracker that for the time being will let you listen Scottsdale Pd and Chandler.

Conventional comms are still out there that include DPS, Civil Air, Mil Air you have to have the right scanner or receiver though, Some federal Vhf, Uhf, Medical, news media. Ham radio as you can see there is still quite a bit out there. So spin the dial and have fun! Go to radioreference.com click on database find your county and see what interest you.

To: ArizonaScanner@yahoogroups.comFrom: airbosss@...: Mon, 12 Jan 2009 03:47:31 +0000Subject: [ArizonaScanner.com] Yuma

Is anybody familiar with the Yuma area? I listened to my scanner a lotabout ten years ago. I got busy and didn't use it for a long time. NowI am on a job in Yuma and I have time in the evening. I listen to theair traffic at the airport, but that's about all.From the posts I read on this group it sounds like communications havechanged a lot in the last several years. Is there anything I canlisten to with an old school scanner? Anything in Mexico? I'm realclose to the border. I used to know it all, but I'm really lost now.Thanks.-- Guy

I drove back and forth to yuma 5 days a week for about 10 years;i mailnly only monitor law enforcement and fire and medical;milatary police and border patrol.you will find most of what your looking for on radio reference;butt i can tell you for sure;Yuma county sheriff and yuma city are both astro digital,and were linked together about a year ago;and ycso was still simulcasting analog,Blm Law Enforcement rangers and USMC,have both gone to a system that can,t be programmed into a pro-2096;don,t know about other models;Border Patrol also went digital encrypted,with very occasional analog tidbits;CHP Winterhaven was still A.M not long ago;butt they are slowly converting to digital;Utilizing county based trunking.Chp san diego did go digital;Utilizing San Diego Countys System.And supposedly San Diego County is supposedly converting to Open Sky;Which no known scanner can moniter.San Luis,Somerton and welton were still analog vhf;as of about a year ago.Don,t know if you can currently monitor Yuma Proving Grounds or not;Hope this helps,If anyone else has some newer info;

It is not encryption. Often the dispatcher simulcasts on both VHF and 800 (Lakes), but it is not linked. The noise is usually feedback in the system caused by a multi-site system that is marginally supported.

David,

Is the noise also affecting the user?

In order to follow then i need to listen to MCSO lakes correct?

Have you listened to it?

This is the first time that i have heard the noise (over the last week) on this frequency, which also makes impossible to understand.

I've listened to a recording of it.

To me it sounds like interference from a data system of some sort.

will I bot 2 scanners at 1 time, this pro-89 and a pro-76 for 30 dollers at a yard sale just last week. The pro-76 is newer but it did not get 900mhz, the 89 does. where I live the police don't come, its run by the sheriff, i did find there freqs on the internet and it seems there not trunked, I also have the dps in it too, but its not like living in phx where you can hear any thing you like, being in the county of mesa far east, maybe its the antenna. being on a fixed income i have to wait to buy a good scanner antenna. as for the pro-76 I sold it

Sounds like you live in Apache Junction.
Or an unincorporated area of the county.
Mesa is a city that has it's own police force.
And Mesa is in Maricopa County, where the Sheriff's office is most definitely 800 MHz trunked.
You must mean that you're listening to Pinal County.

Where do you actually live?

Well........

They gave up those frequencies anumber of years ago.
460.200 is now DPS Metro East.
460.025 went to Rural Metro

I can't get to the radio reference site from this computer, but I'm
sure that someone else will post a link to the appropriate page.

You are obviously new to Arizona, so I'll give you a little help.

It doesn't matter what your mailing address is, you pay taxes to the
town/city/county your abode sits in. And the police authority for the
taxing authority is who responds to a particular address.

I 'live' in Phoenix, but I have a Glendale mailing address.

Hey, I am very new to scanning, I have a Pro 2096 scanner and after about 3 weeks of trying to figure this thing out and the whole thing of who is on what frequency, I can say I am finally able to listen to who and where I want (kinda). I am mostly right now interested in listening to Police, I was wondering if anyone could take the time to look at my scanner list from Win96 and tell me if I am on the right track or way off.

Thanks for your time
Adam

FPS is a branch of ICE who is a branch of Homeland Security they provide security at Federal buildings ,, they have offices all over, the closest to here is California & Colorado.

http://www.ice.gov/pi/fps/org_hfs.htm
As for why they are here who knows, could be because of the big football game couldve been just passing thru

lotabout ten years ago. I got busy and didn't use it for a long time.
NowI am on a job in Yuma and I have time in the evening. I listen to
theair traffic at the airport, but that's about all.From the posts I
read on this group it sounds like communications havechanged a lot in
the last several years. Is there anything I canlisten to with an old
school scanner? Anything in Mexico? I'm realclose to the border. I
used to know it all, but I'm really lost now.Thanks.- - Guy

I'm a state guy.

I did find this on wikipedia
<http://en.wikipedia.org/wiki/United_States_Federal_Protective_Service>

And I'll second the observation about the NFC Championship game.

For those wanting to listen, I would think 'Super Bowl' as most of the
same agencies will be involved.

Walter,

Thanks for the info.

He was out of place here (well maybe :). While walking the other day i seen another unusual looking SUV all black with dark tinted windows with a row of Antenex type antennas like the (one i added)driving around the different neighbourhoods in the area have not seen him since.

A row [straight line] or a square?

Did you happen to catch what type of license plate?

The best thing I've heard in this vein was coming down I-17 around
Indian School one night about 2am. This was when I was working the
night shift and I used to monitor DPS Metro channels all the time.

I heard a unit come up on simplex on Metro Central. He used "Homeland
Security 524" or some such as a call sign. I don't recall the numbers,
but he prefixed it with "Homeland Security." He was calling for any
unit in the area and said he was following a DUI vehicle north on the I-17.

Every so often I'll hear a "Homeland Security" unit come up on a DPS
channel for something or other.

That's not something I hear every day.

Dave

From: John
Topic: 3893 Message: 15663

Just heard a transmission from a patrol officer to dispatch that he was having a tough time getting used to the new radios. With the added beat (#17), and the radio problems over the last few weeks, I am wondering if they are adding a third dispatch channel. There is no evidence of Chandler changing freqs or trunk system, and no new talkgroups have been noted to date. I will keep monitoring, but if anyone has more info I would love to hear about it.

Walter,

Seems like there was a row down each side and maybe one in the middle rear.

As far as the plate goes i do not think there was a Government plate on it.

They are still on VHF. If you want to hear them through Phoenix Talk Groups which are 17xx you will need a digital scanner, otherwise any VHF scanner will work.

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2009-01-26 03:26:49 UTC
From: Roy Schahrer
Topic: 15684 Message: 15685

The simulcast ended some time ago when ALL phoenix PD units were equipped with 800 MHz mobile and handheld units. Using a 150 MHz or 450 MHz backup system would make no sense if nobody in the field carried them. The PRWN has a FailSoft mode that forces the controllers into a single group of channels similar to a normal repeater system if the system goes down. That way the 800 MHz radios the officers have in the field are the radios they would still use if the main system fails.

I would hate to be out on the street and have the trunked system fail and have to get back to a patrol car to find the 150 MHz or 450 MHz radio that I had not used in months and hope the battery had a charge.

The Mesa Fire part of the system uses the simulcast to 150 MHz to allow it to communicate with the rest of the valley that does not use the 800 MHz radios. It seems to work fairly well, though many of Mesa's units also have 150 MHz radios for 154.280 Mutual Aid even though dispatchers can patch it into the 800 MHz side when it is needed.

15688. For Sale: Bearcat 396T Scanner

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2009-01-26 04:12:09 UTC
From: Craig 'Lumpy' Lemke
Topic: 15688 Message: 15688

BCD-396T Hand held scanner.

Purchased at the Phoenix HRO on Feb 1, 2008
for $573.94, receipt in hand.

Never left my house. Never even ran down
the first set of Alkaline batteries I put
in the thing. I just don't do much scanning
like I used to.

Included:
- Scanner (obviously)
- Rubber Duck
- SMA to BNC antenna adaptor
- Wal Wart charger/power supply
- Serial data cable
- Wrist strap
- Belt clip thingie
- Original box and manual

It's programmed to Phoenix PD, MCSO,
Phx Fire, Mesa/Tempe/S'Dale etc. It's also
programmed to local air, SoCal, Las Vegas,
various other non-AZ agencies. The non-local
freq's are currently locked out of scan
so that it scans only Phx PD.
The Phx PD channels are Alpha tagged to
indicate A deck 600, B deck 900, Chase 900 etc.

I'll include a copy of the SW Freq directory, 9th edition.

$400, PayPal or Cash.
No live chickens. I have enough of them.

I'm in N Phoenix near Tatum and T'Bird.
I'll ship it for ten bucks if you don't
want to make the trip.

eMail me off list please, if interested.
lumpy@...

Please include "Bearcat 396T Scanner" in
the subject so my spam filters don't kill you.

I'll post to the list when it sells.

Thanks -

Craig 'Lumpy' Lemke

Final last words..... FAILSAFE or, in this case, FAILSOFT.

It will only force the controllers if it knows there's a failure, and if the computer isn't the failing part of the system. Computers only look for problems in the areas the programmers tell them to look, and you can't tell me the programmers know every conceivable scenario for radio failures.

Sorry, had to be a little bit of the Devil's advocate... Can you tell I really love the 800 MHz trunked/digital concept?

Ed

Personally, I agree with the 'don't put all your eggs in one basket'
approach, but that's not the current thinking in public safety radio
engineering.

That being said, there are 5 levels of 'FailSoft' available on a
Motorola Trunker, going all the way down to simple repeaters from a
single site. No computers involved at that point.

The channel layout is pretty old by now but if the radio layout shown
on the RadioReference web site is close to accurate,
http://www.radioreference.com/apps/db/?sid=2508
the ICALL and ITAC channels on the next to last column are analog
repeater and simplex frequencies. I think I've read documents a while
back where the frequencies are still the same but the names keep
changing. 8CALL? 8TAC? They're supposed to be for agency to agency
communications when no other means exists but I wonder if they might
be pressed into service for a short time in an emergency. If they are
still in the radios that is. There was also something I've heard
while back about they are "supposed" to be in every public safety
agency's radios.

That's quite a common practice at Valley agencies. The issue is primarily officer safety - so that nearby officers know where you're going even if they're not responding to the traffic - and just in case a non-patrol, off-duty, or a patrol officer away from his MDT happens to be nearby, they can respond as well. Officer safety details are voiced along with suspect descriptions, direction of travel, and exigent circumstances, while complainant names and other sensitive information can stay on the MDT.

It's not just priority 1 calls either - some priority 2's must be voiced - for the same reasons.

Not sure how AZ is staffed. But in some states
there's only a couple of inspectors for the
entire state. And they don't really patrol
like municipal cops do. Not likely there's
a lot of traffic.

They used to come up on State Police freq's
in AR from time to time. I think there
were two inspectors in that state total.

Ken;

I really hope you aren't using this monstrosity and that this was a mistake.
Grouply is causing nothing but hate and discontent, and spams the world.

I have no personnel issue or problem with selkling scanners on this site;what i do have a problem with is that;this is the 3rd or 4th item;where scanners have been posted for sale that i,ve seen recently,when i attempted to post a generic message of scanners for sale;It was rejected and a statement from the group narrator,saying it was UNAUTHORIZED.?

Vince everything with and (A) you can listen to. For the trunking systems i would try Site. Depending on your location i would try and listen to the following. Have fun

Chandler Police, Scottsdale Police, Paradise Valley Police,

001
Thompson Peak (Scottsdale)

010
Southeast Center (Mesa)

15706. My scanner stream

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2009-02-02 14:23:16 UTC
From: thomas
Topic: 15706 Message: 15706

I been sent a lot of emails asking me to put my scanner back online again. Well here it is: I went and rented a server from Teamspeak which will hold up to 25 listeners for now. I have programed it to monitor Mesa Fire, Mesa Police, Scottsdale Fire, Rural Metro Fire, when slow the MCSO will come on live. One of the most busiest frequencies programed is the Phoenix DEA channel 6 which is the surveillance frequency very busy just about everyday. I have the Sky warn traffic programed, the US Forest service programed and all the media choppers.Phoenix fire is programed but only the digital side you will hear. If you would like anything else added let me know. This is not related to the other Mesa scanner. The audio used with this server is very clear.
Equipment used : scanner pro-2096 and out door x antenna and a 800 mg antenna. and 20 ft of LMR 400 coax. Come and listen the scanner is live daily from 7 am till 10 pm. thanks.

Just a friendly reminder of the groups rules on this.

This is a direct quote from the description on the group's homepage.
****
"Posting non-Arizona-specific for sale items or issues not directly
related to radio scanning in ARIZONA will get you banned."
****

At the moderators' discretion, 'generic', or commercial looking for
sale messages may either be rejected, or just deleted. Want to do
internet sales? There are plenty of other, more appropriate venues.

Local, onesie sales will continue to be permitted.

If you can't track P25 digital, your choices are really limited. Mesa FD simulcasts their trunked radio traffic on VHF. Phoenix FD has not yet transitioned to P25 and are still on VHF as well. Arizona Dept. of Public Safety (Highway Patrol) is still on UHF. I don't think any of the Police agencies around Mesa are non-digital, but I may be mistaken. I don't listen to PD all that often.

15713. Phoenix RWC System Question

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2009-02-05 12:52:21 UTC
From: Robert R.
Topic: 15713 Message: 15713

Hello, Using a PRO-106. My Phx RWS system has not been chatty for the last day. It was working fine a day ago. Data channels are there. All icons are as usual. The T is lit up. Even in wildcard mode it's quiet. All other stuff works fine, i.e. Glendale, MCSO, APS, Etc..
Any clues? Haven't changed anything. P25 Auto, Etc.....

Thanks
Robert

15715. strange van seen in yuma

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2009-02-08 18:34:02 UTC
From: Kevin
Topic: 15715 Message: 15715

While staying at the yuma Howard Johnsons for work related punishment, I saw a mini van in the parking lot with virginia plates and had a GPS antenna plus 4 rows wide of 6 length "can antennas" on top. they had the black tops and were about 1.25 inches across. I will presume they were vhf upon prior experiences with them. it only had the 2 front seats and the rest were removed. A laptop mount was in the back. I saw no other radios or black box items inside. they appeared to be removable.

Also the Yuma MCAS is doing the peliminary work to put a F-35 wing there. just fyi

Interesting considering that they list "We are currently based at Banner Del E. Webb Medical Center in Sun City West, Arizona." on their website at http://traumaflight.com/About_Us.php. May actually be flying out of Glendale Airport from the AirWest Helicopters hanger since AirWest is the owner of the helicopter.

I always hear Lifeline Ambulance request them for the Wickenburg area,
and Lifelines Dispatch says Trauma Flight is off Del Webb with 15 min ETA. ,
Ive seen them at the hospital there when I was down there at Christmas they
fly a Bell 407 helicopter

Go figure ;)

He's saying that the NASCAR safety guys (hired fire crews, medic crews, and what not) will be using digital radios that cannot be monitored by scanners on those frequencies. A friend of mine who works at the track doing that sort of safety coordination said that they had this digital plan in the works for a while.

ok thanks now I am on board !!!!
Thomas
Store Detective
My scanner live feed is on teamspeak address 75.102.2.194:8772

To: ArizonaScanner@yahoogroups.comFrom: jon@...: Mon, 9 Feb 2009 10:55:50 -0700Subject: Re: [ArizonaScanner.com] NASCAR Fans....

He said that some if the NASCAR drivers are switching to Motorila Turbo radios. These are digital modulation radios that no scanner can monitor.

Drivers are not going to MotoTRBO, some teams do have a 2nd or 3rd frequency on their radios that is digital but they do not use it during the main race unless they need to keep the other teams off their messages. For now, drivers will remain in the clear, analog, simplex. Also a caveat to the NASCAR Officials, yes they have been using TRBO for some time, however they also still use analog for the main control of the race as the teams have to listen to them as well and since they don't have TRBO radios, the comms need to be analog.

Now give this a few more years and a MotoTRBO capable scanner and well, there may be some changes.

Besides which, what would they do about all the scanner
rentals/programming that goes on at the tracks?
That can't be an insignificant amount of money they'd be throwing away.

15727. Intresting weekend on it's way

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2009-02-09 22:45:49 UTC
From: thomas
Topic: 15727 Message: 15727

Just came back from a meeting with state and local officials along with Director of security for Wescor ,Director of Security of Fiesta Mall, Mesa Detectives and the Gang Violence team for a event that will be at the Metro Center Mall and the Fiesta Mall. Saturday and Sunday there will be a NBA signing at these mall's along with a dance session from MTV/Andy Jackson American Idol crew. So what's the problem and why all the concern?
In L.A when they had a signing they had to close the mall down due to fires ,fights with gangs, and drug related problems. In Houston TX they had to close the Mall down because of over crowding and violence problems. Denver had minor problems with lots of shoplifting, and minor fights.We all know what can happen in both of these malls in the past few yrs. There will be lots of pd coverage in these malls both dressed and plain clothes officers. I will be hosting Mesa Police (Dobson PD district) and Fiesta mall security Sat and Sunday for some good listening. Basically they hope nothing happens but told everyone to gear up in so many words for the worst to come.This will be bigger then the Super Bowl or any other event that has happened in these malls. So heads up . You can go to my feed by down loading teamspeak and going to this addy for the feed (75.102.2.194:8772) You will not need to register with the server. I can handle up to 25 listeners. I am sure their will be other feeds will will cover these areas.
Thanks Tom

Topic: 15731 Message: 15731

Just a couple days ago I say a fire truck in Dunbar Springs as I drove by. On the back end was the number 412. It was a red truck, either an engine or (less likely) a LT. Though not a new truck (hence new springs), but by no measure an antique truck, I am wondering where this truck is from. The shop is located in central Phoenix (Jefferson/ 7th Ave), and the only 400 FD units that I know of are Indian Rez units.

Any clues???

*** It's Coming ***

www.tucsonhampicnic.com

Calling All Ham's and Family......

The Spring edition of the Tucson Ham Radio Picnic is going to be taking place on April 4th at Christopher Columbus Park in Tucson Arizona.

This will be a HAM RADIO DAY in Tucson since RST will be having their HamFest in the morning and then we will all enjoy the afternoon at the picnic and you can share with us what you bought.

This picnic will feature some great prizes including a Yaesu VX-170 handheld and other donated prizes.

This is a potluck style picnic and we invite you to bring something to share. The updated potluck list
can be viewed at the website.

Please join us and have an eyeball QSO with all your Ham Buddies and family.

There's a playground right next to our Ramada #4.

Check out the Tucson Ham Picnic's website for all the details.

See Ya There

If you plan to listen to PHX PD, MCSO, and most any other PD in the metro area, you will need a P-25 capable scanner. <personal pitch> Look at the GRE 500/ 600; they made the RS scanners in the past, and have now started selling their own models. 6 of my 8 scanners are Uniden, but I am looking at the GRE because of features and reviews; though the price is steep (~$500).

What scanners do you have now? What do you enjoy monitoring? What area of the valley do you live in?

Feel free to contact me privately if you wish.

John

15740. Air Evac - PHI, Inc... New Repeaters, Frequencies and Digital Squelch tone

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2009-02-17 02:35:13 UTC
From: heliport7
Topic: 15740 Message: 15740

On 155.325Mhz I've noticed that Air Evac in the Valley is now using a Digital Coded Squelch tone of DCS 156. (Not the PL tone used before. If
you still have the old CTCSS tone programmed you're not hearing them.) It's
also a Repeater now and I believe it's referred to as White Tanks.

I've also found a new Frequency for Air Evac in the Valley: 153.530 with a DCS of 156. This is also a conventional Repeater and according to the FCC site it is transmitting from the "TALLEY BUILDING 44TH & THOMAS."
Here's a link to the FCC License: WQJN819:
http://wireless2.fcc.gov/UlsApp/UlsSearch/license.jsp?licKey=3056344

Each frequency is carrying different traffic. They don't appear to be
linked.

They have several new licenses listed, just search: PHI, INC
Another one is 155.2875, Mt Ord.

Anyone have any better info on thier system?

Keith

15741. RE: [ArizonaScanner.com] Air Evac - PHI, Inc... New Repeaters, Frequencies and Digital Squelch tone

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2009-02-17 03:45:24 UTC
From: Dan Rollman
Topic: 15740 Message: 15741

The new AirEvac repeater frequencies around the state are all listed in the new 10th Edition Southwest Frequency Directory (www.ArizonaScanner.com) which should be shipping next week. But unfortunately I don't yet have complete CTCSS lists for them all. Where not specifically listed in the FCC database, I did also reconcile the coordinates of each license and include the frequencies in the book with their respective mountain-top location names. Here's the list (sorry for the poor formatting when copied over - the first frequency is radio receive or repeater output, and the second frequency is radio transmit or repeater input). Anyone have more details?

Maricopa County:

Shaw Butte Tower 159.9000 Simplex
South Mountain Tower 159.6300 Simplex
Downtown Phoenix Repeater 153.5300 158.2725
Downtown Phoenix Repeater 159.1125 155.3250
Usery Pass Tower 159.8700 Simplex
White Tanks Repeater 155.3250 159.0000

Other Arizona Frequencies Outside Maricopa County:

Bill Williams Mountain Repeater 156.1800 151.0550
Bill Williams Mountain Tower 159.8100 Simplex
Black Metal Peak Tower 158.3850 Simplex
Casa Grande Repeater 151.9700 157.5375
Casa Grande Tower 159.8850 Simplex
Guthrie Peak (Safford) Repeater 155.3250 151.0625
Hualapai Peak (Kingman) Repeater 155.3250 151.0625
Keystone Peak (SW of Tucson) Repeater 151.0250 159.1125
Mt. Lemmon (Tucson) Repeater 151.0475 156.0675
Mt. Lemmon (Tucson) Tower 159.8550 Simplex
Mt. Ord (Payson) Repeater 155.2875 158.8650
Mule Mountain (Bisbee) Repeater 156.1800 151.0550
Page Repeater 155.3250 159.0000
Parker Dam Tower 158.1300 Simplex
Pinal Peak (Globe) Repeater 159.5325 151.6025
Telegraph Pass (Yuma) Repeater 156.1725 151.0550

15744. RE: [ArizonaScanner.com] Air Evac - PHI, Inc... New Repeaters, Frequencies and Digital Squelch tone

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2009-02-17 05:23:13 UTC
From: Dan Rollman
Topic: 15740 Message: 15744

Great timing. One of my sources just provided a list of the new channels and DCS codes for AirEvac. It won't show in the book since the book has already gone to print, but here it is:

Ch1 White Tanks Repeater [DPL 156] 155.3250 159.0000
Ch2 Downtown Phoenix Repeater (Talley Building) [DPL 156] 153.5300 158.2725
Ch3 Mt. Ord (Payson) Repeater [DPL 156] 155.2875 158.8650
Ch4 Porter Mtn (Show Low) Repeater [DPL 156] 159.0600 154.8675
Ch5 Bill Williams Mountain Repeater [DPL 156] 156.1800 151.0550
Ch6 Black Metal Mtn Repeater [DPL 156] 156.1950 159.0600
Ch7 Hualapai Peak (Kingman) Repeater [DPL 156] 155.8275 151.0625
Ch8 Page Repeater [DPL 65] 155.3250 159.0000
Ch9 Pinal Peak (Globe) Repeater [DPL 156] 159.5325 151.6025
Ch10 Telegraph Pass (Yuma) Repeater [DPL 156] 156.1725 151.0550
Ch11 Mt. Lemmon (Tucson) Repeater [DPL 156] 151.0475 156.0675
Ch12 Keystone Peak (SW of Tucson) Repeater [DPL 156] 156.1725 151.0550
Ch13 Mule Mountain (Bisbee) Repeater [DPL 65] 156.1800 151.0550
Ch14 Guthrie Peak (Safford) Repeater [DPL 156] 159.1950 151.0625

15747. pinal county king beat

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2009-02-17 21:27:09 UTC
From: liferocksj
Topic: 15747 Message: 15747

While listening to pcso this morning I noticed the king officers said they were headed for north or south king beat...This seems to be new, does anyone know why they started this or where the north/south line is?

15748. RE: [ArizonaScanner.com] pinal county king beat

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2009-02-18 00:11:50 UTC
From: Dan Rollman
Topic: 15747 Message: 15748

The new 10th Edition Southwest Frequency Directory (www.ArizonaScanner.com) which should be shipping next week has updated Pinal County SO beats, including the King beat. King beat covers the Pinal County side of Queen Creek, Johnson Ranch and Copper Basin areas. I don't know what North or South King beat would be. I wonder whether there is a firm dividing line within the beat at all? Perhaps they were just referring to the North end vs. South end of that beat generally? Anyone else have more specifics?

Thanks,
Dan

From: Kenneth Howard
Topic: 15747 Message: 15749

I know what it used to be; the aj area was district 6 or frank;and all of apache jct;queen valley all the way down to almost queen creek;divided only by beat areas;and all of the units worked together essentially;any of the units were subject to being dispatched anywhere in that entire grid.in general there used to be a small squade that worked just the queen creek area,all the way down to the edges of coolidge and maricopa and so on;butt because of the population growth etc;the patrol districts may have been compleatly revamped.

SAM91 L&C currently 110 nmls to the NE at 32Kft reporting a few bummps.
I can't hr who he is talking to but it is prolly AF1 on the ground at
PHX so I duw noy hear.
They don't give call signs much on A/A chat but if you can hr anything
now it will be SAM91.

ADD 128.450 to the list and prerably in a second scanner it can be busy.
I think it is a repeat on the west side, never checked its location yet.

Had today on SBS-1

S50050 12:09:30PM - 12:13:23PM No Alt info.

S91 11:18:17AM - 11:36:45
24875ft - 31000ft
and 11:13:39AM - 11:17:27AM
15950 -23550ft

Hrd him talking to someone (prolly AF1 on the ground?) real L&C -
said Sam91 & currently
110 nmls to the NE at 32Kft reporting a few bummps.
I cud not hr who he is talking to but it was prolly AF1 on the ground
at PHX

Hrd more A/A .wmv files - I will upload to files section

I also found a brief A/A from yesterday.

Had AF1 from 11:37:29am - 11:52:16am
1175ft - 30400ft

I did not hr anything on what I had figured wud be KPHX APP/Dep.
I don't hr the tower from my QTH and never ground.
Did not hr any reference to him by any other pilots.

Kevin Phx Az

L&C = Loud and Clear

Sam91 is the radio callsign of the lead aircraft in front of AF1 giving weather (wx) conditions.

15766. RE: [ArizonaScanner.com] POTUS LEAVING KPHX

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2009-02-20 16:45:51 UTC
From: BP
Topic: 15750 Message: 15766

Special Air Mission, it's a call sign of an aircraft usually associated with the 89th AW out of Andrews, Air Force One has a small fleet of support aircraft that follow along with it, from the C-17s that transport the secret service vehicles, to advance teams of agents and support staff. It could have been one of those aircraft or in some cases AF1 travels with a second aircraft (VC-25 or a C32) that can transport the president should any mechanical issue ground the primary aircraft.

Discovery just had an interesting special on a few nights ago "Inside Air Force One" , was quite insightful.

15767. Programming PRO-97 for trunking

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2009-02-19 23:27:05 UTC
From: jch_031241
Topic: 15767 Message: 15767

I think my IQ must have dropped 50 points after attempting to read and understand the owners manual for my Radio Shack PRO-97 scanner. I want to use the scanner to monitor trunked systems in the Tucson area such as Davis Montahn Air Force Base or Tucson police. I can enter the control frequencies for given trunked system into a single bank but am not sure of how to enter the user group info so that I can listen to a particular group within a given trunked system.

I have spent hours on the internet trying to find an intelligible guide to programming and using the PRO-97 but most posts seem to take pride in using esoteric jargon and abbreviations and do not show examples with actual trunked system data. Is there someone out there who would be willing to walk me through a real-life example? I sure would appreciate it.

Perhaps there is even a user group in Tucson that meets periodically. If so, I'd love to join.

Jim, the retired (or is it retarded) engineer in Tucson.

15768. Re: [ArizonaScanner.com] POTUS LEAVING KPHX

Yahoo group: ArizonaScanner (2007 — 2012)

From: tbierney
Topic: 15750 Message: 15768

When POTUS moves a lot of other people and equipment moves before, during and after a trip.

AF1 is not an aircraft as many people think. It is a call sign used by any US airforce aircraft when POTUS is aboard. If the aircraft brought POTUS to PHX then took off without him they wud use the callsign Samnnnnn where nnnnn wud relate to the aircraft tail number.

A lead aircraft gives advance wx reports so AF1 can avoid any bumps. On this trip the lead a/c was a C-32A, ser# 98-0001 using radio callsign S91 and voiced as Sam91.

If you want to hear some of the A/A chit chat listen to the files I uploaded in the folder
POTUS visit to Phoenix.

SAM = Special Air Mission and a/c carrying people wud normally use the SAM callsign.
A/C carrying equipment wud use the callsign REACH Tango.
Hope this helps.
Kevin

From: Michael Hamann
Topic: 15750 Message: 15769

Correct.... "SAM" is Special Air Mission.

"Air Force One" is ANY Air Force aircraft carrying the President, just like "Air Force 2" is any Air Force aircraft carrying the Vice President. If the President flew on a Marine aircraft, the callsign would be "Marine One", "Navy One" for Navy aircraft, etc. If the President is aboard a civilian aircraft, their callsign would be "Executive One".

"REACH" is the designator for Airborne Mobility Command...not necessarily an aircraft associated with the President's entourage.

I was under the impression the a/c that they were initially talking about was the one the POTUS was on. In which case it would have AF1 even if it was a single engine Cessna, however after reading the msgs, it does indicate that it may have been a lead a/c testing the air, so to speak. And the L&C could have been describing the turbulence as Light and Choppy.

Hi Jim,

I don't know if you got the email I sent, but here is the information
on the Southeast Arizona Radio Monetoring Group. The meeting is
tonight and help for monetoring the Tucson area is available. You can
also join the SEARM yahoo group. You will need a digital scanner for
DM and also for Tucson PD TAC and SWAT.

SEARM-Group Get Together
Saturday February 21, 2009
6:00 pm - 9:00 pm
(This event repeats every month on the third Saturday.)
(The next reminder for this event will be sent in 2 days, 2 minutes.)
Location: Village Inn Restaurant

Street: 6635 E.Grant Rd. Tucson
City State Zip: Tucson

Email me if you need help and I hope to see you at the meeting tonight.

Jim, KE7VJW

15773. Re: [ArizonaScanner.com] Air Evac - PHI, Inc... New Repeaters, Frequencies and D

For the Mt. Lemmon repeater, does that repeat all Air Evac traffic in AZ or just the Tucson area?

Jason

Arizona Public Safety News Network has had many exciting things to announce in the past few weeks. Today, we are proud to announce a new website that is complete with numerous resources, including a forums section, a photo gallery and crime maps. In addition to monitoring radio traffice, APSN continues to work with numerous PIO's to ensure we are bringing you the most current, accurate and up to date information. All Alerts are now posted on our website with a one hour delay.

We invite everyone to visit us at www.apsn.us and enjoy the new website and resources.

If you're thinking about raising a stink about advertising, you should be fair and complain about all the other advertising that goes on for the Southwest Frequency Directory and Radioreference.com as well.

I've seen a lot of propaganda about the new Southwest Frequency Directory lately and I get really irritated when someone asks a simple question and they're told to look it up in the book or go to radioreference.com instead of simply answering their question. This is only the 2nd message I've seen about APSN lately. Seems a bit hypocritical to me.

If this group is about scanning, then let's help each other out and quit putting in a plug for the directory and the website every time anyone asks a question.

Ed

You're kidding right? Have you seen what this main picture is on the front of this group? Its of the SWFD, which is something you have to buy, which in turn constitutes a form of advertising. Besides, you read the topic before you opened the thread- if you were surprised to see that this thread was just as the topic stated (about APSN) then blame your finger for pressing the right click on your mouse over the topic.

The other guys post in here about their meeting locations and what not, so why cant APSN post about things relative to them? Its obvious that your comment was made out of personal grievance, rather than being annoyed with the shameless plug. Lets all play nice.

Well Chad, tell your fiance that NOT the only on who listens to that "annoying little radio".
I've scanning to close to forty years! I have a Pro94 and in December I purchased the dital PRO 106,
which I'm still learning thanksto the help fron this group and some others.
I'm not in Northern AZ but rather in the mid-western section ont the border of AZ and NV just south of Bullhead City.

Just a FYI, if you look way back at post #1 from the originator of this group you'll notice he's also the one responsible for the SWFD. For the extremely small numbers of posts he's had here over the years plugging his product be grateful. I for one don't begrudge him the rare heads up that another edition is available. I think I've seen way more plugs here for his product by others.

We have a good thing here, spam gets nipped in the bud and a lot of info is shared. I like the way the rules are written and administered. Sure you'll see waves of people wanting to unload a scanner but apparent selling as a business is not seen here.

Thanks Dan and whoever else moderates things here.

Time to climb back off my soap box.

We're in Cochise County. The SE corner. Mexico to the south and New
Mexico to the east.

Any one down here?

With that, I'll declare this topic closed.

Please, no more messages about what should and shouldn't be posted.
We moderators will handle that issue off-list as needed.

And please, no more messages about whether questions are answered
properly or not. If at any time you believe any question was not
accurately or completely and you know a more accurate or more
complete answer, please follow up and post your answer. Do not fail
to answer questions yourself and then later complain that questions
are not answered how you think they should be.

Thanks.

15792. TV Helicopter changes

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2009-02-25 17:19:48 UTC
From: John
Topic: 15792 Message: 15792

Three Valley television news stations announced an agreement Tuesday to share the operations of a single news helicopter in an effort to cut costs.

Channel 5, Channel 3 and 12 News announced that beginning Sunday, each station will use the same aerial footage for and traffic. The move will provide a single shot for each station to narrate as the stations see fit during a newscast.

Helicopters Inc. will operate the single helicopter out of its Scottsdale airport base, and the helicopter won't have any station logos.

15796. DPS INFO Channel?

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2009-02-26 01:06:25 UTC
From: David French, N7FAN
Topic: 15779 Message: 15796

Ok, Walter, Dan, anyone...

What channel has DPS retasked as the "INFO" channel? I hear it referred to on Metro Central quite often.

Thanks,

Dave in Maricopa

15797. Coming to Arizona - Conventional vs Trunking

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2009-02-26 03:51:03 UTC
From: Jim Kelly
Topic: 15797 Message: 15797

My wife and I are headed to Arizona for a couple of weeks in March and would like to know where most of the radio traffic will be (conventional vs trunking).

We will be using Uniden BC785D w/o digital card. Primary interest is in fire, EMS, police and highway patrol. Special interest in air operations in any of the above areas.

I looked at radio reference and see White Tanks tower would probably cover most of the area N & W of Phoenix. Is dispatch regional and simulcast on all towers?

We will be coming in from Los Angeles to Casa Grande and then to Peoria for a few ball games; we will then be headed to Lake Havasu City for a couple of days and then north to California and Oregon before heading back to Montana.

I will accept any help you're willing to give in giving me coverage from Los Angeles to Casa Grande (Phoenix) on up to Kingman.

Many thanks!!!

Helitac

15798. Re: [ArizonaScanner.com] Air Evac - PHI, Inc... New Repeaters, Frequencies and Digital Squelch tone

Topic: 15740 Message: 15798

Here in Chino Valley im getting a lot of bleed over of Chino PD over the new airevac Bill Williams freq, even with the PL/DPL code entered, guess its just because its so close.

I may have to try a different mountaintop.

Mike

15799. Re: DPS INFO Channel?

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2009-02-26 16:53:23 UTC
From: wupatki_az
Topic: 15779 Message: 15799

Dave, I've heard them using West TAC 460.150 PL 100.0 for INFO a few times. They don't seem to run the INFO channel all the time but when they do that's where I've heard it.

For awhile they were using West TAC for training classes, afaik still do. They use callsigns like AB12 for Advanced Basic. That's funny to listen to with all the ficticious characters they use such as Anakin Skywalker, Han Solo and quite a few others.

Anyone with more info please feel free to chime in.

That's pretty funny, is that on weekends? That's when I've heard
similar things...

I too have heard East dispatch advising the INFO channel being closed
or open at different times during the past week or so, but haven't had
a chance to search around for any activity

Another thing, and probably simple, when the they refer to going to
"KS", what's the abbreviation stand for? I hear all the time "10-7 to
KS", "enroute to KS with one", etc...It's obviously the hive :)

Thats interesting;I,ve been monitoring DPS for around 20 years;Never have stumbled across that;although i,m on the road alot and i monitor the district that i,m traveling in;Predominently D12/2/3. almost on daily basis.i,ve heard them screw around on car/car,and its not unusual if they have an involved conversation; to go to another dist. channel that does,nt hit the local repeater;Like 2 metro units will switch to D4 or something like that and b.s. about various.never have heard anything about info channel;although i know DPS is always experimenting with different things;I,ve seen them compleatly turn the towers where Phx dispatched the southend of d12 and all of d4.then part of d4;once they tried handling D6 in phx;D11 has flopped back and forth between Flagstaff and Phx;Phx radio is currently dispatching D11.For about a year a few years ago D13,which is now metro east switched to (453.2250.)and 453.2000).butt reception was always a problem;and they
would get alot of bleadover.and for many years metro east worked on D4.Butt getting bleedover from tucson radio.was almost a daily problem.I monitor the tac channels;butt i very very seldom ever hear anything on them.definatly intrigued.!!! Gonna keep an ear on that one.

DPS Central OpCom is using EastTAC and WestTAC [460.175/460.150] in a
crosspatch as an INFO channel during drive times.
This is only for units that don't have, or get insufficient info from, an MDC.

This started about 3 weeks ago.
Since this is not a 'district' channel, it only has a dispatcher part-time.

EastTAC is on Thompson Peak, and WestTAC is on White Tanks.
No, we don't have anything centrally located.

WalterH

BTW, both of these stations will be moving to narrowband in the next
couple of weeks.

My wife and I are headed to Arizona for a couple of weeks in March and would like to know where most of the radio traffic will be (conventional vs trunking).

We will be using Uniden BC785D w/o digital card. Primary interest is in fire, EMS, police and highway patrol. Special interest in air operations in any of the above areas.

I looked at radio reference and see White Tanks tower would probably cover most of the area N & W of Phoenix. Is dispatch regional and simulcast on all towers?

We will be coming in from Los Angeles to Casa Grande and then to Peoria for a few ball games; we will then be headed to Lake Havasu City for a couple of days and then north to California and Oregon before heading back to Montana.

I will accept any help you're willing to give in giving me coverage from Los Angeles to Casa Grande (Phoenix) on up to Kingman.

Many thanks!!!

This weekend I was racing at the Firebird Raceway motorcycle vintage class. This is for motorcycles older that 1978. I ride a 1971 Honda CB450 that has all unnecessary parts removed to make it light.

The corner workers used Motorola portables (16 channel) and they were on 463.5.

If you listen on Sunday 3-1-09 and hear that Vintage bike number 765 won you probably have the wrong universe. I will be there but unless everyone else falls down, I won't win!!!!! But I'll be there.

Alan N5BGC (Vintage rider 765)

I would avoid it, I bought one and exchanged it twice because they told me it was either defective or I was doing something wrong.

All it did was introduce noise and boosted nothing. What is the application, to sit on top of a handheld or inline with coax and and external antenna?

Had a new helo circling the new ball fields at 107th Ave/Camelback today
It was white & green with a red aft section. No tv logos.
Valley West helo announced himself on 123.025.
He got no response,(that I hrd).
Cud not see his tail/N number.
Anyone got a foto or N number?
Kevin

15818. New PL Tones on Phoenix FD?

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2009-03-03 01:01:50 UTC
From: Robert Homuth
Topic: 15818 Message: 15818

My Yaesu VR120D scanner does not have a PL decode function, so I
didn't notice the Phoenix FD changed it's PL tones until I programmed
them into my VX-6R radio last night. They are not 173.8 Hz anymore.

What are the new PL tones? Are they the same on all channels? And, how
long have they been changed?

Hmmm...Are you sure about that? Just think of that undertaking, all
those radios, all that programming to change PL's?

I still got'em on 173.8

There have been no changes to the PL tones for Phoenix FD. All channels are 173.8 except 13, 14 and 15. They use a 100.0 PL.

Ed

According to my newly received 10th Edition Scanner Guide (very nice, too), Dobson Dispatch is TG 3000; Dobson Tactical is TG 3001.

And both show as P25 encrypted. Since I don't scan them, I don't know much more than that.

Hi Dave,

Dobson Dispatch (TG: 3000) is P25 but not encrypted. Where in SWFD-10 are you seeing it as encrypted? I'll need to get it corrected if so. The main entry on page 99 correctly shows it as P25 but not encrypted.

As you note, Dobson Tactical (3001) is encrypted.

Thanks,
Dan

15825. City of Mesa

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2009-03-05 14:21:50 UTC
From: thomas
Topic: 15825 Message: 15825

In the past week we have had several fires that have have claimed 2 lives, and dispersed over 50 residents to find other living arangements. Also 1 arson fire that almost took out a unwanted house but due to the quick response of Mesa PD saved this house from being burned down. Most of these fires were near the center of Mesa with the reponse of eng 203,218,204,ladder 204.My scanner will be streaming Mesa Fire for the next several days to see what happens, until i can find a way to set the stream on another server somewhere I will be streaming on teamspeak. The server addy for my stream is as follows : 75.102.2.194:8772 . You do not need to register with the server. The last 3 apartment fires this week were mostly from leaving food on the oven. I myself live next to an apartment who twice this week has left the apartment smoking from leaving refried beans on the stove and leaving the apartment.This is twice in the last 3 days. I went out and brought 3 smoke alarms and a fire extinguisher for the 3rd time we may not be so lucky. For those who did not see the news last night about the house fire that took the life of a father and a daughter, the son inlaw stated that the spanish community do not know what a smoke alarm is so please explain to your heighbors who may not know what one is on how they work .Dad and daughter were only 2 feet away from exiting the house per the news cast. Thanks and be safe out there don't always depaned on your neighbors be elert all times trust your nose. You smell something that is not right check it yourself, thank god i did.

My mistake. I was looking at the ENC code for tactical and typed it in
on the dispatch channel as well.

Sorry. Good catch.

Dave

Thank you for the reply.
Im seeing some differences in the 10 codes from agency to agency in Vol 10
of the southwest freq. directory. I also found another version on google.
Any idea what version Gilbert uses ?

Thanks

Dean

15831. Advice for newb: go with the Pro-96 or the BC296D?

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2009-03-07 22:30:37 UTC
From: etrex51
Topic: 15831 Message: 15831

I've been wanting to get a digital scanner for a while and you guys seem very knowledgeable on this group so I'd like your opinion.

I live on the west side of Phoenix, near Westgate and the Cardinals Stadium. Considering getting either the Radio Shack Pro-96 or the Uniden BC296D. Mainly want to listen to police, fire, chopper, etc. in the area.

I did manage to locate a decent deal on a brand new in-the-box Pro-96, but I'm leaning towards the BC296D based on the research I've done so far. Any advice would be greatly appreciated!!

Thanks,
Eric

15832. Icom IC-R100 Government model (No Gaps) FOR SALE

Yahoo group: ArizonaScanner (2007 — 2012)

From: Chad
Topic: 15832 Message: 15832

Not sure if its appropriate to sell something in here... if not, please remove my post.

I have for sale an Icom IC-R100 Government model. This is a super sensitive radio and comes from a non smoking house. I'm asking $320.00 obo (price includes shipping)

The ICOM R100 covers 100 kHz to 1856 MHz in AM, FM and FM-Wide. It has an an LCD display and tuning via knob, keypad or 100 memories. The rear panel has 3 antenna inputs [N/SO239/N]. This R100 system includes the bracket and manual. This is a grandfathered, type-accepted receiver with the FCC approval plate.

Any questions, please email me at chad556(at)gmail.com

Neither of these will do 700MHz. Those frequencies are starting to be used in the valley so you may want to consider whether anything you want to listen to is on, or may move to, those frequencies.

Unfortunately, that means quite a jump in cost also.

Correct me if Im wrong, but
to listen to Phoenix PD and Glendale
one would need either a BC396/996 Or the PSR500/600 ?
Not sure of the RS equivilant.

Dean

Correct me if Im wrong, but
to listen to Phoenix PD and Glendale
one would need either a BC396/996 Or the PSR500/600 ?
Not sure of the RS equivilant.

Neither of these will do 700MHz. Those frequencies are starting to be used
in the valley so you may want to consider whether anything you want to
listen to is on, or may move to, those frequencies.

Unfortunately, that means quite a jump in cost also.

From: sh9730
Topic: 15840 Message: 15840

Hello all,

So, I ve been in AZ going on a year now, and joined this group upon my move over here, lots of good stuff! But, this is my first post here!

I ve pretty much figured out the CGPD and FD stuff, and PCSO sort of although I dont know which units work where yet for them. DPS is pretty simple as well...

The codes are not too hard except I laugh at the 459, 211, 415 stuff since those codes are associated with the California Penal code sections...(Im sure its an APCO thing). I am still getting used to the 8 and 9 codes though!

Also, between this board and RadioReference I ve been able to figure out most of the stuff I care about down here in Casa Grande and environs, but lately I ve decided I want to add the "Regional Fire" dept. that works on the outskirts of Casa Grande etc and am having trouble locating the frequencies.

Radioreference has their FCC licenses listed, but they are not listed in the RR database with which is dispatch etc....?

Anyone can help me out?

Also, I ve got GRIC Fire dispatch in since they border us here in CG (looks like PD is encrypted) but Im getting an awful lot of interference to the point of having to lock it out.

Thanks in advance

Do you know if they are still going to be dispatching on 155.325, or
will they work the repeaters in their ops area only?

The newest version of Dan's most excellent Southwest Freq. Directory shows the following for Regional Fire Rescue.

They primarily dispatch and run routine traffic via Nextel. They seem to be the Pinal County's version of Rural Metro, in regards to unincorporated county areas. They are subscription based, too.

154.040 Alternate
154.280 Alternate/Mutual Aid/Fireground
460.950 Southwest Ambulance Freq
158.760 Pinal County SO Central Chan. - Mutual Aid.

Here is the basic info, and I would recommend buying the scanner book. Excellent resource to have. And they also have a Phoenix/Tucson metro guide (smaller than the whole book) that has Maricopa, Pinal and Pima counties in it.

The Pro-96 and the BC296D will both work on Phoenix, Mesa, Glendale, Elmirage or any of the unencrypted Analog and Digital P25 systems in the valley.

They both have Pro's and Cons personably I think the Pro-96 decodes digital better than the Uniden BC296D. I went with the 296 because of the ability to change the step and mode. The Pro-96 does not allow you do do this.

Date: 2009-03-10 02:32:01 UTC
From: N7JND
Topic: 15846 Message: 15846

Hi All,

I am trying to track the location of what appears to be a digital transmission in the Tucson area on 154.350 or 154.355. This is a very strong signal on both the east side and the northwest side of Tucson.

Anybody have any clue to whom these transmissions belong to and where are they being transmitted from? Any help would be appreciated.

Be careful: The latest addition to the Phoenix Regional Wireless is a 700-mhz system. Tempe is on it, but it's a full-fledged member of the Mesa/Phoenix/Gilbert/Apache Junction system. So I would expect those other agencies to (a) start showing up on it and (b) some of the other RWC sites move to 700 Mhz allocations.

Date: 2009-03-10 17:50:40 UTC
From: joescholz
Topic: 15849 Message: 15849

Hello All!

Concerning P25 control frequencies, is each CF located at a different transmitter? I ask because it seems that in any given location, one CF enables better reception for a specific system talk group. For example, downtown using 867.1125, I get great reception for Light Rail, but not for Phoenix PD. Phoenix PD works better at 867.2125. In north Phoenix, a different set of CF's work better. Thank you for any direction on this.

Peoria PD has begun testing their new 700 Mhz system. Right now, the control channel is at 771.5687 My BC396 is displaying the
system ID as: 0534h-0501. So far, haven't monitored any talk groups, but that may be a few weeks before they have those set up.

As for the GRE models, you'll need either the PSR-500 (handheld) or PSR-600 (desktop) for monitoring Phoenix PD talkgroups, or any other agency on the digital side.

Hi All,

I am trying to track the location of what appears to be a digital transmission in the Tucson area on 154.350 or 154.355. This is a very strong signal on both the east side and the northwest side of Tucson.

Anybody have any clue to whom these transmissions belong to and where are they being transmitted from? Any help would be appreciated.

Luke is having their bi-annual open house this coming Saturday and Sunday.

<http://www.luke.af.mil/openhouse2009/index.asp>

Anybody do up an updated P96 file for the base and the airshow?
It was real cool listening to the air-to-air stuff during the T'Birds
show 2 years ago.
I was shooting some photos, and it was REAL helpful listening to the
Air Boss to know what was coming in.

The Saturday show will be the opening of the T'Birds show tour for 2009.

Dean,

You can use the following to monitor Phoenix and Glendale.

Uniden Mobile,

BC796D/ Will not do 700MHz

BCD996T/ Will do 700MHz

RS/GRE Mobile

Pro-2096/ Will not trunk track 700MHz

Pro-197/ Will do 700MHz

PSR-600/ Will do 700MHz

Uniden Handheld,

BC296D/ Will not do 700MHz

BCD396T/ Will do 700MHz

BCD396XT/ Will do 700MHz(new soon to be released, preorders are being taken)

RS/GRE Handhelds

Pro-96/ Will not trunk track 700MHz

Pro-106 / Will do 700MHz

PSR-500/ Will do 700MHz

Tempe can currently be tracked on the Phoenix PRWN or RWC system. As far as I know the ASU 700 MHZ has their own system so you will need a 700 MHz trunk tracker.

Supposedly Peoria and Buckeye will have 700 MHz in the future

Also the Pro-106 and the Pro-197 are both on sale right now for $399.99

Tom,

I would suggest just the Arizona Eastern freqs though they may not talk much other than getting track warrants to move.

Also, I think the rebuild of the steam locomotive is still underway, but I don't now how they are doing with it at the moment.

David

Looks like it is run on the Arizona Eastern Railway, might try:
160.21500 or 161.35500.

15874. [ArizonaScanner.com] Luke AFB Trunked System

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2009-03-17 00:14:12 UTC
From: Robert R.
Topic: 15874 Message: 15874

Getting ready for this weekend airshow at Luke...

Anyone monitor the LAFB Trunked system?

I just want to compare notes for setting up the GRE PSR-500, I have the following...

Base: 406
Offset: 380
Step: 25 (although I've seen 12.5 posted too)
System Type: MOT VHF/UHF
One control freq: 408.9625

I set it to P25 AUTO and did not see the trunked T light up. Switched to MOT VHF/UHF and now the T is happy.

Thanks

Robert in West Phoenix

Robert,

I have my 396T set up just like yours (with 12.5 step). I have real good luck hearing them around the 43rd Ave & Glendale. I keep it in the "search" mode to look for new talk groups. Should be a few that pop up for this weekend.

Doug

Hi Doug,
I had mine set to 25 Khz for a few hours last night and heard no traffic. I'll set it to 12.5 and see what happens. How active are they? This morning (530am) I saw/heard no control channel. Had the software running and saw no log entries either...

When you say "search" I think that is equivalent to "Wildcard" on the GRE PSR-500. As that mode will show any TG's that are NOT already programmed, is that the way yours is?

Robert

15877. If you are looking for an antenna!

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2009-03-17 17:29:40 UTC
From: thomas
Topic: 15877 Message: 15877

I went and brought a 800MHz Scanner Antenna
Model: 20-283 | Catalog #: 20-283 and let me tell you it works great.

I use it on my base station.

I live in Mesa and pick up Gila River fire and Maricopa Fire as if they were the towns I was living in.

This is a nice antenna.

It picks up very well on UHF, VHF,and digital.

I would recommend this antenna to everyone that listens to the digital radio.

Also My scanner will be going to a 24 hr /7 days a week starting this week I have a new pc that should arrive today.

Now I won't have to worry about my kids playing with the scanner. Thanks to (group owner of scannerbuffsofamerica)

Doug, I got home to find LAFB control channel has changed to 410.1625. I switched to 12.5 steps, hear nothing.
I've scanned and heard military voice traffic (analog) in the 400 area, but when I switch back to wildcard/open on the trunked sys they are not there.
Maybe we can chat on the phone? Or go direct on the email.

Robert

15879. [ArizonaScanner.com] Luke AFB Trunked System UPDATE

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2009-03-18 00:00:39 UTC
From: Robert R.
Topic: 15879 Message: 15879

Finally got it to work... The radioreference makes to mention that you have to put in 380 as Low Ch, and 759 as Hi Ch.
Now it's working.
This is for the GRE PSR-500

Robert

That's odd. I don't know how the programming for the PSR-500 is, but on my 396, all I need to enter is the base freq of 406 with the offset of 380. What is the 759 Hi, and how did you come up with that?

As of Wednesday morning at 8am, I'm getting the control channel on
409.3625 with a good 4 bars. So, I'm sure the control channel switches regularly.

I'm going to try to enter 759 into my scanner and see what it does.
But, as it is, 406 as the base, 380 as the offset and 12.5 as the step seems to work great for me.

In regards to your other post, the "search" mode is just a difference in terminology. I'm sure it means the same as "wildcard" on the PSR-500.

I'll let you know what the upper channel (759) does.

By the way, your location might have something to do with reception. I'm floored that I get such a strong signal as far away from Luke as I am.

15881. Re: [ArizonaScanner.com] Luke AFB Trunked System UPDATE

Yahoo group: ArizonaScanner (2007 — 2012)

Topic: 15879 Message: 15881

The system is off of white tanks thats why. I pulled a few PSR-500 files off of the PC at HRO to analyze. One had Luke AFB in one of the folders.

Of course when the file was made, they were using the "old" freqs and 25 step, but looked further into the settings..had them all except the Lo & Hi.

Been listening to them since last night. Turned it off, had dinner, when I went back to the radio, the control ch had changed. So did a search to find the ID of 731F and found them using a 3rd freq. So put that in the list, and it's happy again.

Robert

that is the frequency for dist.8;the only other towers they operate on is d6 and d4 and d9;every once inawhile you will here repeater problems and they will tell all units in that area to either go to state 460.2250; or to another dist.I know or have heard dps is or has participated in regional radio;such as prwn or rws;butt have,nt heard any real speculation on any changes. I have a chance to be around the house today, so I am going to listen for the thunderbirds that should be doing some practice today.

My question is what call signs do the Thunderbirds use?

Also does anyone have a list of last years frequencies that the thunderbirds used or a verified list to start off with?

Had a great afternoon in a field at the end of the runway with an ex F16 pilot & 2 other ex marine pilots.
I missed the F22 Raptor demo but will catch it today at 1pm.
The T-Birds practice was kinda strange different from what they will do today at 3pm today.
An H60 (helo) wanted to land during theT-Birds demo.
Luke control replied "I will need a written letter of approval from the Commandant to even think about it!" (grin!)
Saw an Osprey for the first time - came over us in vertical mode.
A C17 gave us a great demo including a short stop and backup - his short take off demo got delayed as his #2 engine stalled.
Red Bull demonstrated the impossible things a helo can do.

http://www.youtube.com/watch?v=RGu45s1_QPU for U Tube video.

Lots of static display a/c came in.

Hi,
I'll be going to the Luke air show tomorrow.
I have a PSR-500 & Id like to confirm the proper settings for
the P25 system.

That's odd. I don't know how the programming for the PSR-500 is, but on my 396, all I need to enter is the base freq of 406 with the offset of 380. What is the 759 Hi, and how did you come up with that?

As of Wednesday morning at 8am, I'm getting the control channel on
409.3625 with a good 4 bars. So, I'm sure the control channel switches regularly.

I'm going to try to enter 759 into my scanner and see what it does.
But, as it is, 406 as the base, 380 as the offset and 12.5 as the step seems to work great for me.

In regards to your other post, the "search" mode is just a difference in terminology. I'm sure it means the same as "wildcard" on the PSR-500.

I'll let you know what the upper channel (759) does.

By the way, your location might have something to do with reception. I'm floored that I get such a strong signal as far away from Luke as I am.

Hi,

I'll be going to the Luke air show tomorrow.
I have a PSR-500 & Id like to confirm the proper settings for the P25 system. Im showing some discrepencies from SW Feq directory vol 10 and Radio Reference. & what was listed here.

Type: P25

In the trunking tables Ive set:
High Chan 759
Offest 380
Base Freq 406
Step 12.5

Control Channels
409.375000
409.550000
409.775000
409.950000
408.962500

Can anyone please tell me if I have these all set properly or not.
Thanks for your assistance.

Dean

The system is a MOT VHF/UHF
Step 12.5, base 406.0 offset 380, lo ch 380 hi ch 759.

i have collected the following as control freqs: 409.3625, 409.5625,
410.1625, as well as 408.9625 from the big book.

Robert in West Phoenix

Thanks For the info.
Im only seeing threshold settings in my win 500 software in the "extended settings tab" that affects all systems in the radio. Are these the Hi & low settings I need to change ?

In the "trunking tables" settings I did see:
Hi Chan
Offset
Bae Freq
Step

Based on a previous msg on here i set them as follows

759
380
12.5

Is this correct ?

Thanks

Dean

no. over in the tsys tab and then pick the system from the first list then
in the right hand side there should be 3 buttons to click on. enter the info
there. the freqs in the first and the other settings in the second i
believe. I dont put anything in the tables button.

It's always a good idea to have a few search ranges programmed in, 'just in case' the team has switched frequencies. Had you been listening to 141.075am, you would not have been disappointed. You can tell they really enjoy their jobs when listening to them. I have a wav file I can share if you'd like?

Would you consider placing that file in the 'Files' section of the group's website?

If you convert your .wav file to a .mp3 file it will compress it to a MUCH smaller size and virtually no loss of audio quality. Do a google search for "wav to mp3" and there should be several free converters out there.

I was not disappointed with the show only the fact i did not "hear" the show as well. I remember 2007 hearing them, and you are right, they really love their work. I do remember the Air Boss making a comment at the beginning the the different teams would "squawk" such and such but had no way to know what freq that meant. Is there a way to program in a search range in the PRO-96? I had an old PRO-50 that this programming was easy but have not found it with my PRO-96

There are no firm plans for the narrowbanding mandate.

IF we went 700 MHz like the PSCC consultant recommended, we'd have to
increase the number of radio sites by 50%.
And replace ALL the mobiles and portables.

A more likely scenario is that we narrowband the existing district and
CI frequencies, and use the ones in-between for new/split districts
and maybe some new TAC channels. All mobiles and portables purchased
in the last 6 years can be used on narrowband channels.

So, as far as the current district frequencies, they haven't changed
in several years. And won't for at least a couple more.

You're saying that DPS has no plans to goto a narrowband plan? The mandate is 2013 and my read of Part 90 is that is set in stone and I think that is January 1st 2013 not the end of 2013.

The "squawk" you are referring to is a 4 digit radar identifier that a transponder on the aircraft uses to respond to a radar system scanning it. In Mode "C" it gives A/C ID as well as speed and altitude. This is used by radar controllers to track and monitor an aircraft traveling through their sector. As far as I know it can not be "listened" to as it is an encoded response message to the querying radar set.

I too was at the airshow on Sunday. I not only got fried by the sun but sandblasted as well. I didn't bring my scanner (PRO-92) with me as I didn't want to carry it while checking out the static displays. I believe you would have been able to see the squawk information while checking out the AWACS that was there as it's radome was rotating and I think they had some of the workstations up. I got there to late to see for myself. They did scrub the V-22 Osprey demonstration on Sunday as well as the scheduled programs of the Parachute jumps and the Extra 450 and biplane due to winds.:-(I also think the T-birds scaled back their show a little due to the high winds.

All in all, still a great show. The F-22 demonstration was amazing. It can some rather "un-natural" maneuvers that give it quite an edge. Very Cool.

What I said was, we do not have a plan in place right now. There are
still people that think we should abandon our current system and move
to a statewide 700 MHz system.

We're currently working with Game & Fish to get them narrowbanded.
Then, besides DPS, we still have to do Agriculture, ADOT, ADOC,
ADJC.................
I'm going to be busy for the next 3.5 years.

I think you'll find that "squawk" in aviation terminology refers to the code that the pilots enter for the IFF transponder that identifies the aircraft on radar displays to air traffic controllers, not to the frequency of their radios.

The tree will be fine, but your house might not if lightning hits the palm tree. A couple years ago I had a wire hooked to a palm and running over to my house to serve as the antenna for a ICOM SW receiver. One night when we were out to dinner lightning hit the palm tree, traveled the length of the thin copper wire into the house, burned up the receiver, left the rug where the power supply was laying charded black as coal, and burned out a TV, a Tivo, my wife's computer, and other stuff in the house. We were lucky the house didn't burn down. It probably would have except that it is an old one with concrete blocks under the stucco. Since then I've been told by many people that palm trees are a primary traget of lightning. I didn't believe the "lightning never strikes twice" story and never did that again.

15932. Air Evac dispatching procedures

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2009-03-28 17:00:27 UTC
From: Jason McDowell
Topic: 15932 Message: 15932

I was wondering for the Air Evac dispatches, what determines when they announce a call on the air and when they don't? In Phoenix on 155.325, sometimes they'll sound the tone and then announce the call. Then sometimes they won't announce anything but the copter will be notified by phone, off radio.

Jason

Excellent reason for following the old rule of long wire
antennas. Use a lightning arrester on the connection
to the radio and isolate and ground the wire through
a spark gap connected to a copper rod driven into the
ground. The idea being that the ground rod was more
attractive than continuing into the house.

I used this system for years when I lived in the Midwest
with it's frequent TStorms. I had the house hit several
times but not my antennas. I had a inverted V shortwave
antenna attached at the point of the V to a big old oak tree.
Oak tree got hit a couple of times but didn't bother the
antenna.

Subject: [ArizonaScanner.com] Re: OT: Screw Eyes in Palm Trees - Antenna Mounting

The tree will be fine, but your house might not if lightning hits the palm tree. A couple years ago I had a wire hooked to a palm and running over to my house to serve as the antenna for a ICOM SW receiver. One night when we were out to dinner lightning hit the palm tree, traveled the length of the thin copper wire into the house, burned up the receiver, left the rug where the power supply was laying charded black as coal, and burned out a TV, a Tivo, my wife's computer, and other stuff in the house. We were lucky the house didn't burn down. It probably would have except that it is an old one with concrete blocks under

the stucco. Since then I've been told by many people that palm trees are a primary traget of lightning. I didn't believe the "lightning never strikes twice" story and never did that again.

I have my tree trimmer use nylon rope to tie a pulley on my palms - with a lanyard to haul up my 1 acre loop.
The nylon will last longer than the trimming period.
Important hint - make sure your lanyard is a loop!
It is frustrating to watch what may happen if it is not a loop.

An Artical was in the paper last week sometime talking about the plane being here but was short on speculation if John was here too. If you saw it today, then it been here quite awhile.

Scottsdale Muni thing, I'm sure.

Seriously, I went to Deer Valley yesterday around 2pm expecting the jet to
have departed.
Lo and behold, before I completed my right-hand turn to the field, I nailed
it's location.
Parked the car, grabbed the camera and walked to the gate.

An elderly couple were there looking at the jet
I said hello, they said hello back.
As they were leaving, the elderly gentleman said to his wife "next time I
bring the good camera".

Darn good looking jet with the Qantas markings.
I'll post the pics later in the week.

That little tidbit of a story of not letting him land except at night time is just that, a story. He had to file a flight plan and with that flight plan they must let him land at his choosing according to his flight plan.

An attempt at very dry humor at the expense of the poster who stated that JT
can't land at Deer Valley during the day but can during the evening hours
without any true explanation.
Read "Seriously..."

The Salt River doesn't run that dry.
Rough crowd.

"What's the deal with airport peanuts"?

Hey little boy, does your mommy know what you are awake at that time of the night trying to argue with adults? If she finds out it will be no more milk and cookies for you and may even cause the revocation of your Elmo privileges..

The range on the Tempe system imo has gone down since the switch from 800mhz to the current apco system. So if you are listening from a distance it may not come in clearly, example being I'm in Chandler and it comes in hit or miss sometimes for me. As far as listening once you get it programmed, since the move they placed encryption on several channels leaving the Patrol ones in the clear however.

When programming the system make sure it's a APCO25 and not a Motorola Type 2, also having the latest firmware updates from Uniden seems to provide the best functionality and tuneability with the APCO systems.

The frequencies you want to use are System/Simulcast F, 771.91875 , 773.16875, 774.16875, 774.41875 , any other Simulcast from my experience listening to Tempe will just cause it to pause on the control channel.

Uniden Firmware with Instructions at
http://www.uniden.com/index/downloads.cfm

Hope that helps.

Brian

Subject: [ArizonaScanner.com] 700 system/ tempe pd

Can anyone give me advice on how to pick up the 700 feq. that Tempe is now using. I have a Uniden BCD996T but for some reason, it can't hear anything out of Tempe.

Thanks!

I have a BCD396XT and I can hear them from the middle of Tempe. The decoding isn't great, though. A lot of cut-offs and I don't think I'm picking up everything. Even the channels that aren't encrypted.

15949. Tucson Ham Radio Picnic Photos Online

Yahoo group: ArizonaScanner (2007 — 2012)

We would like to thank each and everyone that came to the Tucson Ham Radio Spring Picnic. We had an absolute blast and would like to especially thank those who donated prizes and brought something to the potluck.

The photos have been uploaded to the website at www.tucsonhampicnic.com

You will notice that a couple of the options on the website are grayed out. This is because they are being updated for the next picnic.

Plans are already being made for the October Fall Picnic which will not on the same day as the OPRC Hamfest. It will take place on the following Sunday at Reid Park. Please check the website regularly for updates and mark your calendar when we mark ours.

The Official Count based on both sign in lists (Adults & Kids) to this picnic was 91.

Greetings All,

I have uploaded the photos I took of the RST DesertFest 09 Hamfest to my personal website at www.n7jnd.com . Please enjoy the photos and if you didn't make it, you can see the great time you missed. The photo gallery at my website can be found at the right side of your screen.

Also, the Tucson Ham Radio Spring Picnic photos can be seen at www.tucsonhampicnic.com .

From: meathead28
Topic: 15951 Message: 15951

Today I was going through some boxes and found my old friend, my 245XLT. I put it away after Phx went digital. After turning it on I am still able to listen to Phx fire but am unsure who else to listen to. I have moved close to Glendale so I want to listen to Glendale PD. My question is, has everyone went digital or is it just PHX? I wouldn't mind listening to Glendale PD, Peoria PD and Scottsdale PD. Is it possible with this scanner? Any help greatly appreciated.

From: John
Topic: 15953 Message: 15953

Sounds like a couple of radio techs testing 418.825 on Mingus Mtn in Prescott. They IDed the freq as "CH 5". Lots of OTAR and Analog DES with enough Analog clear to figure out what is going on. No P25 yet.

I have this listed in an old list as DEA Ch 5. Don;t know if it still is after the DHS freq reallocations.

Might be Postal Service. Several web sites list it as input to a repeater on 414.750.

Also the MT Fed blog reports it as input to an interoperability channel on the east coast.

15957. Fire Dispatch questions

From: Bill McLean
Topic: 15957 Message: 15957

Does anybody know how Phoenix/Mesa Fire dispatch centers communicate? How does Mesa know which Tempe/Chandler/Sun Lakes unit might be closer to a Mesa dispatched call and vice versa? Is there a web page that shows the location of the fire units from their GPS locators?

What are the frequencies for Mesa Ch 9 & 11? Are they the old AJ fire frequencies?

Thanks,

Bill

15958. RE: [ArizonaScanner.com] Fire Dispatch questions

Yahoo group: ArizonaScanner (2007 — 2012)

From: Dan Danz
Topic: 15957 Message: 15958

One of the requirements of participating in the Automatic Aid dispatch mechanism is that all apparatus must be equipped with Automatic Vehicle Location (AVL) equipment.

The last time I was in the regional fire dispatch center in Phoenix they had two huge live wall displays that showed the location of all fire apparatus. And any operator could bring up the same display on their consoles. Every line-item entry in the CAD logs shows the distance the unit is from the dispatch address at the time of the entry. The CAD system also considers this when it makes apparatus recommendations to the alarm channel operator.

It's key to the concept of Automatic Aid (as opposed to the usual Mutual Aid agreements where assistance needs to be requested)

I notice sometimes the Alarm operator will suffix a unit designation with the words "as closest unit" as kind of a clue to everybody that this unit wouldn't normally respond but was being asked to because it was closest at the moment.

How they communicate among themselves? I don't know - probably ringdown lines. But I suspect that when putting out the initial call, the alarm operator is free to take the closest Mesa, Phoenix, Apache Junction, Gilbert, Sun Lakes, Tempe, (and the list goes on an on) without prior consultation with the other dispatch center.

Their dispatch protocol and procedures manual is online someplace. Start with http://phoenix.gov/fire/20501.pdf

I found an interesting Homeland Security document at

http://www.safecomprogram.gov/NR/rdonlyres/AE8AF975-6DC9-462D-B365-E01A995FE496/0/ComputerAidedDispatchDocumentationofEfforts.pdf

From: Ed K (K9EDK)
Topic: 15957 Message: 15959

Dan is pretty close in his observations.

When it comes to Mesa, our two CAD systems are interconnected. When the Phoenix CAD system determines that a Mesa or Gilbert truck is closer, it is recommended for dispatch. Once the dispatch information is processed (a matter of seconds), it is also sent to Mesa Dispatch, who voices the call on the Mesa radio channel. The same thing happens in reverse when the Mesa CAD system recognizes a Tempe or Chandler truck to be closer. Because the two systems talk to each other, we know the status of every truck on the Mesa system, and they have the same information available about the Phoenix RDC equipment.

Our wall map has been changed, but it still displays the status of the trucks on OUR system. As far as I know, it will not display the location of the Mesa trucks, but will show them at their station location and if they're available or not. I'll have to check on that when I get back from vacation because it may have changed when we got the new wall map a few weeks ago.

The wall display cannot be displayed at the individual consoles, but we have a comparable mapping system that can, but it does not show us where the fire trucks are. It does show us where the callers are. As far as I know, all of the PD and FD agencies who have 9-1-1 capabilities have the PowerMap software.

I hope that answers your questions. I actually like the picture Dan painted better. Maybe he can design our new dispatch center when the economy gets better and we can afford to move into a bigger building.

From: Bill McLean
Topic: 15957 Message: 15960

Thank you both for your response and and the answer to the first part of my questions. Can anyone help with the answer about Ch 9 & Ch 11 in Mesa?

From: Matthew
Topic: 15965 Message: 15965

At lunch I go to the 40th street viewing area (south side of the airport) and some days I can't get 126.6 (today) and 124.1 from the tower (pilots come in fine). Other days the frequencies are fine. I have a Pro96 and its works fine. Any ideas?

Brought it up on Google Earth

There's a turn around area at the north end of 40th St at the wash.
33 25 33 n, 111 59 43.44 w
Looks like it has a pretty good view of the east end of the runways.

DPS's Knutson Station [2610 S 16th Street] is a pretty good place to
watch the easterly approaches..
I've seen AF1 twice.

From: phxffemt
Topic: 15970 Message: 15970

Hello all, does anyone know the 800 MHz for Phoenix fire , I am looking for the k chanels,,

15971. Re: PHX FIRE 800 meg

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2009-04-17 01:54:26 UTC
From: Joe Badura
Topic: 15970 Message: 15971

Hi All,

Phoenix is using their 800mhz radios more and more for events. I have also heard Phx fire units refer to K-Deck channels on their 800mhz radios. I think these are simplex frequencies. Try the list below and let us know if you hear anything. These are new simplex freqs licensed to Phoenix Fire and PD.

769.00625
769.01875
769.03125
769.04375
774.93125
774.94375
774.95625
774.96875
799.00625
799.01875
799.03125
799.04375
804.93125
804.94375
804.95625
804.96875

Phx fire radios are also on the RWC systems Simulcast-B or Simulcast-E if you are listening from PIR. Talkgroup IDs will be 1600-1799. 16xx talkgroups tend to be active during events. Try to identify channel numbers if you hear any active freqs or talkgroups. There is not much information available for the new Fire 800mhz radios.

Have fun and let us know what you hear this weekend at PIR.

Cheers,

Joe

AIRxxx is the OFFICERS callsign, not the aircraft's.
Aircraft callsigns are either Ranger

Every officer that drives a marked unit is responsible for enforcement/motorist assistance when in the vehicle.

And, 'AIR' units are eligible to work off-duty details like construction and wide-load escorts, as are [civilian] Service Patrol units.

Any more questions about DPS, just ask.

Sorry, got lost.

Aircraft are either Ranger xx for Helicopters or King Air xx, or
Cessna xx for fixed wing.
Heli's also use the callsign Phoenix [or Tucson or Kingman] Ranger on
other agency frequencies.

From: ftlaud_dj
Topic: 15978 Message: 15981

Fortunately this piece of garbage has been arrested.

PHOENIX -- Police have arrested a man in connection with the shooting of a photo-radar van operator Sunday night, according to the Phoenix Police Department.

According to department spokesman Sgt. Andy Hill, the department and the Arizona Department of Public Safety will hold a joint news conference Monday afternoon to announce more details of the arrest.

In the meantime, photo-radar vans have been yanked off Arizona highways as DPS and Phoenix police investigate the shooting, according to Redflex Traffic Systems Inc. CEO Karen Finley.

The 911 call came into DPS at 8:52 p.m. Sunday.

DPS said the driver, Doug Georgianni, 51, was shot multiple times while sitting in the marked van parked on the eastbound side of Loop 101.

Georgianni was taken to John C. Lincoln Hospital, where he was pronounced dead, DPS said.

DPS said Georgianni had been working for RedFlex Traffic Systems Inc. as a driver technician for three months. RedFlex is under contract with DPS to operate the photo-radar systems, which are used to catch speeders and red-light runners.

"The entire Redflex family is grief-stricken for Doug and his loved ones," Finley said. "We will continue to dedicate every resource to work with the police to help identify and apprehend the person who took Doug's life.

Phoenix police described the shooter as a white male in his 60s with a thin face, unkempt white hair and a white mustache.

He was driving a two-toned white and gray 1980s-model Chevy Suburban with black rims and tires and a roof rack, police said. Investigators believe the shooter left the crime scene traveling south on Seventh Street.

From: Joe Badura
Topic: 15970 Message: 15983

I did hear a little about the trailer / pickup fire, but I was not available to listen very closely.

I heard activity on 1615 (command). Fire and medical were also heard on 1614 and 1613.

You mention that you were on an ambulance at PIR. What channel numbers / display descriptions were on the radios that were being used? I'm trying to map these talkgroups to a channel number / radio display.

Thanks,

Joe

15986. Native Air LTR Systems

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2009-04-23 00:56:31 UTC
From: Joe Badura
Topic: 15986 Message: 15986

Has anyone heard Native Air on the Phoenix or Usery Pass (Mesa) LTR systems that are documented in the SWFD? I have heard other talkgroups such as businesses, and school busses on the LTR systems. I have never heard Native Air.

What frequency or system/talkgroup does Native Air use for dispatch in the Phoenix valley?

Thanks,

Joe

ADOT for that area was (156.1350) Actually under Yuma"s Command as for Careflight;last i knew of;local still heavily depended on air evac;which has a whole new bracket of frequencies;Emscom is always interesting if your into that and you should be able to get CHP and riverside county pretty well from quartzite;Atleast i always did on my 2096.tou should also be able to get Yuma county and Yuma proving grounds if you have a digital scanner.Fyi CHP is slowly converting bit by bit to digital trunking via whatever county system in that area.Only area i know positivly is CHP El Cajon;which they along with Imperial county is on San diego"s system which is digital;that district reaches all the way to the eastend of the lagunas west of el centro.

AIRxxx is the OFFICERS callsign, not the aircraft's.
Aircraft callsigns are either Ranger

Every officer that drives a marked unit is responsible for enforcement/ motorist assistance when in the vehicle.

And, 'AIR' units are eligible to work off-duty details like construction and wide-load escorts, as are [civilian] Service Patrol units.

Any more questions about DPS, just ask.

The statewide CHP radio system is staying on Low band for the foreseeable future. There are some areas of the state where they operate on county systems, but very few. In many areas they have their radios and a local county radio also. That's what some of the units in my county do. Even though they have our radios, they are still dispatched on the low band system. They only use our radios if they are working an incident with us, or are in an area where their radios don't work. The CHP was talking about going to a statewide 700 mhz trunked system, however that is on longterm hold, for lack of money. Their low band system suits them well as it has for many, many years. Don't look for them to change off of low band statewide for a long time. Much of the Border division of the CHP is on the San Diego RCS, but that is not the norm. That is the only reason they are digital in that area.

Mike

It was on the Maricopa County system, TG West TAC, with info on West EM . both are normal digital channels. The special details TGs which are analog were not used.

HOWEVER, I'm not sure that West TAC and West EM are forced on the major sites (TPK and CCB), so they might have only been carried on the White Tank Mountain (WTE) site because that's where the units would have affiliated. There were some in the Mobile/Gila Bend area, and those would've used the Oatman tower, and been repeated at least on WTE.

Those of you who monitor by scanning the Thompson Peak primary site or who don't normally scan the TAC/EM channels would miss it.

Most of the patrol units have VHF radios as well as their digital radios.

Since talking car-to-car on the trunking system requires dispatcher involvement to get the units involved to switch to the Car to Car channel for the area (East C/C, West C/C, Lakes-2, and even East or West TAC or East or West EM), the deputies find it much easier to use the separate VHF radio to talk direct (simplex) on the Search-8 output frequency (159.09). They can talk to each other, coordinate setting up perimeters, meeting for lunch, etc. And while they do so, they can continue to listen to their dispatch channel on the trunking system.

It doesn't work for long distances because they're not using the repeater. And any traffic from another unit (or the dispatcher) using the more powerful repeater will usually wipe them out.

The simplex traffic can be anything. They don't have to use callsigns, they can use names, or they just recognize each other's voices. The repeater mode, on the other hand, is a dispatcher-controlled main channel and requires full protocol.

The dispatcher (usually) can't hear them talking simplex because the dispatcher listens to the repeater input frequency. There is a receiver on the repeater output frequency on the top of the Central Courts Building, but dispatchers seldom have it turned up because then they'd have to listen to the chit-chat from nearby units. I have 159.09 in my scanners, but on a Group Quick Key so I can quickly shut it off when the chit-chat starts.

Occasionally, somebody in a field unit will forget to flip the switch from repeater mode to direct mode and start chit-chatting on the repeater, which will bring a reminder to use direct. The reminder probably will be friendly the first time, and grumpy the second or third time somebody has to be told.

You'll hear this same kind of unofficial traffic on many non-trunking channels, like DPS. It's convenient to use. Sadly, it's one of the things you lose when you go to a trunking system.

As for any increase in traffic in Anthem, it's probably coincidence. All the districts use the channel, especially Lake Patrol in the summer along the Salt River. I'll bet it was heavily used on the sweep on the Westside this week.

So the MCSO digital talk groups for EL Mirage are 3225 and 3226 on MCSO not the Phoenix system is that correct?

Now i am confused most of the TG on the MCSO system are 5 digit exaple (43216) or 3 digit such as 176!

Can you please clarify?

The Maricopa County trunked system has a talkgroup as low as 16. It's perfectly normal. All P16 systems (which the Maricopa County system is even though it has channels with P25 digital audio) have talkgroups that are multiples of 16. So if El Mirage is 3225 and 3226 I'm guessing they are on the Phoenix Regional Wireless network and not the county system. I just checked my Southwest Frequency Directory. It says the El Mirage is 44176 (Dispatch) and 44208 (Tactical) on the county's White Tanks site. However it also mentions that because of problems they're having with the White Tanks site they are using 2847, 3225, and 3226 on the Regional Wireless Network (what Phoenix uses).

16007. Buckeye PD Signal Deviation

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2009-04-26 09:36:21 UTC
From: emerveh
Topic: 16007 Message: 16007

Hey folks can someone maybe tell me why the signal strength is so different with Buckeye PD depending on the frequency. As I am writting this post the current control channel is 939.6625 which is nice and clear. However some of the voice channels (in particular) 936.6625 are very low signal strength and almost unreadable. While 936.4750 is strong. What is the deal?

Charles in Buckeye

16008. RE: [ArizonaScanner.com] El Mirage PD

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2009-04-26 20:57:43 UTC
From: Kenneth Howard
Topic: 15987 Message: 16008

I Had temporarily forgotten about that and was,nt thinking on those terms as i did,nt have my scanner in front of me;i don,t know how you have your scanner set up;butt i have the former mesa prwn now rwc grouped together and county on my third bank;with evry control and sub control channel programmed including scw posse;and i recently have the repeaters tagged and id"d on my 2096;of which that part of it i never used to do.It had,nt occured to me at the time,on what he was saying about the 4 and 5 digit sequence;butt what i had done when things started getting moved and switched around i started entering tag numbers on all of my digital banks;to see what pops up where;so on my my scanner i essentially have group tags or specific id tags multiple entered across the board.so i stand corrected he might be right;on 44176 and 3225/3226.i think your gonna have to fiddle with it;and tonight because he has my curiousity now i,m gonna write down exactly how and
where i,m recieving el mirage.when they pop up on my scanner;unless i pause it which i rarely do and open up the talk group;all i see on the screen is el mirage;pinging on crownking tower;which i clearly recieve all the way to winona or eastern edge of flagstaff;along with the rest of mcso.I loose phx and glendale compleatly by the time i reach black canyon city.I do all of my programming manuelly;1 item at a time as i learn them;I don,t have the software or the computer technology to do it via the computer.So anyway i would go with his suggestion for the most part;butt and play with it on bothsides of the spectrum and see what you get or open up your bank where can recieve all talk groups and see what you get,thats how i,ve discovered atleast half of the group tags i,ve identified.

So the MCSO digital talk groups for EL Mirage are 3225 and 3226 on MCSO not the Phoenix system is that correct?

Now i am confused most of the TG on the MCSO system are 5 digit exaple (43216) or 3 digit such as 176!

Can you please clarify?

Kenneth,

So which system did you hear them on the (RWC) TG-3225/3226 or on the MCSO system?

If on the MCSO or the RWC systems what were the Talk Groups that you heard them on?

Was it a digital or analog talk group?

16009. 700MHz Trunked System ID's 530 and 536

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2009-04-27 08:30:34 UTC
From: John H. Guetherman
Topic: 16009 Message: 16009

I'm curious as to the identities of system ID's 530 and 536 in the 700 MHz band. I live in Peoria and pick up multiple control channels for both systems.

764.140625-764.143750-764.146875, (764.143750 being the center frequency and the other 2 bleed overs?), 769.156250-769.159375, 771.568750-771.571875, 774.418750-774.421875 are some of the control channels for system ID 530. I have heard what sounds like law enforcement voice traffic on 772.668750 and 772.918750.

796.9500 is one of the control channels associated with system ID 536.

I'm using the GRE PSR-500 handheld scanner. I do have the 10th edition of the SWFD, but a couple of scans through the listings didn't show these frequencies. So unless I missed them somewhere...

Thanks for any information anyone can provide.

John
Peoria

16010. Newbie Question

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2009-04-26 20:35:15 UTC
From: frac200
Topic: 16010 Message: 16010

I haven't listened to a scanner for about 20 years and was thinking about starting it up again. I am not sure how much time I will be able listen, but I would probably use it on my way home from home (50 minute commute) and sometimes on the weekend. I live in the Sun City/Peoria area and would like to listen to police, fire, federal and some local stuff. I was at Radio Shack today and they had a Pro-2096 for $160, but wasn't sure if this was a good deal and would allow me to listen to what I would like to listen to. Also, I read that some police freq will be going to the 700mhz and was wondering is that the new future and should I get a scanner with 700mhz or is that not a big deal. Your comments and suggestions would be appreciated.

Thanks

Topic: 15987 Message: 16011

They have been all over the place. They had their own Uhf for a while, then went to MCSO, then when MCSO left they went on the Surprise dispatch as a digital talk group, then over to RWC and now that seems quiet and i think i just heard them on MCSO again using TG 44176.

I am going to sit on it a while and see what i can find.

16012. RE: [ArizonaScanner.com] Newbie Question

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2009-04-27 13:40:10 UTC
From: BP
Topic: 16010 Message: 16012

Hi there, to answer your question. so far at least 3 agencies have working 700mhz systems, so the transition for more is coming along. The 2096, at that price isn't bad as it used to retail for $499 for a while then the bulk of it's existence it sat at $399. The bad side though is the scanner will not trunk track any 700mhz system, so you're kinda out of luck as more systems switch to 700mhz. The radio itself can pick up the 700mhz frequency so you could listen conventionally but as the trunk system switches frequencies in use you'd lose the conversation.

Some people like and some dislike the operation of the 2096 it kinda is something that grows on you, for a long time I had the Pro-96 the handheld version of that radio and it took a bit of getting used to.

Heres a bit older review that lists some of it's finer points:
http://wiki.radioreference.com/index.php/Safetyobc_Pro-2096_Review

Obtaining a scanner that will do 700mhz will save you costs in the future by buying now, the downside is these scanners still sit higher on the price scale around $399+, Ebay may be a good way to shop for a used scanner that will track these systems. If you want something that will keep up with the 700mhz switch, the following radios to my knowledge will either track the systems OR have a patch coming to update the firmware so they can.

Base Units: Uniden 796, 996. GRE PSR 600

Handheld: Uniden 296, 396 GRE PSR 500

Unidens website: www.uniden.com <http://www.uniden.com/>

GRE: www.greamerica.com <http://www.greamerica.com/>

There is also a monthly scanner get-together that is announced over the mailing list here, usually on the last Saturday of the month, it's a great opportunity to hangout with others in the hobby and usually a chance to checkout the variety of scanning handheld equipment out there.

Hope that helps,

Brian

Subject: [ArizonaScanner.com] Newbie Question

I haven't listened to a scanner for about 20 years and was thinking about starting it up again. I am not sure how much time I will be able listen, but I would probably use it on my way home from home (50 minute commute) and sometimes on the weekend. I live in the Sun City/Peoria area and would like to listen to police, fire, federal and some local stuff. I was at Radio Shack today and they had a Pro-2096 for $160, but wasn't sure if this was a good deal and would allow me to listen to what I would like to listen to. Also, I read that some police freq will be going to the 700mhz and was wondering is that the new future and should I get a scanner with 700mhz or is that not a big deal. Your comments and suggestions would be appreciated.

Thanks

The 796 and the handheld version 296 will does not have 700 MHz so it will not track it.

Hi there, to answer your question. so far at least 3 agencies have working 700mhz systems, so the transition for more is coming along. The 2096, at that price isn't bad as it used to retail for $499 for a while then the bulk of it's existence it sat at $399. The bad side though is the scanner will not trunk track any 700mhz system, so you're kinda out of luck as more systems switch to 700mhz. The radio itself can pick up the 700mhz frequency so you could listen conventionally but as the trunk system switches frequencies in use you'd lose the conversation.

Interesting.

I can't find an active license on either one of those freq's for any
trunked system in AZ in the FCC's ULS.
Motorola, USAirways and DHL have conventional licenses on some of the
listed control frequencies.
The talk frequencies have no active licenses in AZ.

What I DO see, is a whole raft of expired/canceled licenses.

Anyone get a system ID?

Did Motorola do similar to the Nevada HP fiasco and let the license(s) lapse?

Another interesting find is that, Buckeye, Town of, has 20, 700MHz
trunked frequencies licensed at 5 locations [WQJG713].

Walter: It was a Community SMR TRS (Mot Type 2 Smartnet, Analog) licensed to Mesa Communications Systems .. System ID 7E3B ..

I wonder if they're switching to 700.

RadioReference.com shows the 800 Mhz system and the freqs . but has no license information either.

The information there was last updated 2/22/2008 .

Charles: one of the reasons some of the voice freqs are bad could be that your receiver is being de-sensed by strong adjacent channels.

Direct tune to one of the bad channels, and then manually tune to either side of it. Betcha you find a strong nearby transmitter that's swamping the front end of your receiver. You could try switching ON the ATTenuator function and see if that helps.

I fight this all the time with 800 Mhz systems and cell towers; for a friend it's so bad that he can't receive Simulcast A or C of the RWC in Tempe - in this case, they generate their own interference: The simulcast A frequency is swamped by the adjacent channel simulcast C control channel at Sky Harbor.

Thanks for the great answers. I am thinking that a handheld would be best fit for me and I definitely want to listen to 700MHZ freqs. If you had a choice between the PSR500 or BC936XT, which one would you pick? Does one outweigh the other? I read the reviews and they seem mixed, but not knowing enough about all of the new features of digital scanners, any comments would be appreciate.

Thanks

Dan using your idea I am not detecting any adjacent channel interference.

As I am writting this the control is 936.6625 and it is barely coming in. However voice is strong on 936.4750 936.4625 939.6625.However voice is weak at 936.4500 Is it possible to have two sites active on this system sharing one control channel?

If I switch to non trunk mode and just monitor the sytem that way it is very noticable the difference in signal quality. To make matters worse right now with 936.6625 as the control my 780 with external base antenna is losing the c/c completley. There is something screwy with this system for sure.

Charles

They have been all over the place. They had their own Uhf for a while, then went to MCSO, then when MCSO left they went on the Surprise dispatch as a digital talk group, then over to RWC and now that seems quiet and i think i just heard them on MCSO again using TG 44176.

I am going to sit on it a while and see what i can find.

16020. Tired of the same radio traffic on your scanner?

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2009-04-29 14:22:10 UTC
From: thomas
Topic: 16020 Message: 16020

Tired of the same radio traffic on your scanner?
Well come on over and listen to mine. I stream live from Mesa ,AZ now for the interesting part what will you listen to ?
All fire stations within the Maricopa County area (except Phoenix fire)
Tonto National Forest Fire crews
State forest Fire crews
D.E.A.
Fiesta Mall security
when it is quiet I will stream the Mesa Police Department, they get to busy sometimes which is why I don't stream them full time.
The towns that fire covers are as follow : Tempe, Mesa,Gilbert,Chandler,Apache Junction, Maricopa City,Fort Mcdowell, Scottsdale,Cave Creek,and Casa Grande. I don't stream Phoenix for 2 reasons.1) Someone already streams that area and I would have to ask permission from him to stream his radio and the other is 2) I have a mountain in the way and I can not pick up the fire ground channels. If there is anything that you would like me to stream send me an email and I will added. This email may show up several times because I have several groups that I am involve with. Now for the link of where to my my scanner feed :
1) go to http://maricopa.az.scanamerica.us/index.php
2) now look for-- Mesa Police and Fire, Gila River Fire, and Maricopa County Fire:
(also includes Scottsdale Fire, Tempe Fire, Rural Metro Fire, Tonto National Forest, State Forestry, etc) Thanks for listening !!

16021. RE: [ArizonaScanner.com] Buckeye PD Signal Deviation

To: ArizonaScanner@yahoogroups.com
Subject: Re: [ArizonaScanner.com] Buckeye PD Signal Deviation

Dan using your idea I am not detecting any adjacent channel interference.

As I am writting this the control is 936.6625 and it is barely coming in. However voice is strong on 936.4750 936.4625 939.6625.However voice is weak at 936.4500 Is it possible to have two sites active on this system sharing one control channel?

If I switch to non trunk mode and just monitor the sytem that way it is very noticable the difference in signal quality. To make matters worse right now with 936.6625 as the control my 780 with external base antenna is losing the c/c completley. There is something screwy with this system for sure.

Charles

Indeed, I think most people know about Scanamerica and IBN and the major streaming sites out there. What's interesting Michael is the other groups he shotgunned this out to had similar reactions..

But like Timm stated, since you posted this Thomas, I'm curious about DEA and what frequencies you're using. Everything I've plugged in for federal recently has been spotty activity with a lot of encryption in use, sans Border Patrol which provides a good listen as the sun goes down.

I have a radioshack pro-2096 tabletop that i keep in my truck (siemi)Did have an outside attenna,butt currently using only telescope attenna,i have it sep up all of phx rwc grouped together;just the control/subcontrol channels and the same with Mcso;just the control/sub control A-B channels all the way across the board; from top to bottom;Exactly like you see if off of the web page.you living in Flagstaff will probably only have to enter the control channels for Crownking and maybe humbolt Mtn.and you should get it crystal clear;i fades in and out alittle bit in the trees;butt i have no problem picking up
MCSO/Suprise/Scottsdale/El Mirage and peoria (453.6500).Pmt fades in and out;Same with Southwest Ambulance;District 11 Dps back and forth;Same with Gila County And Yavapai County;All the way to just east of Winona.On I-40.And of course I,m already getting Winslow/Holbrook/Showlow/Pinetop/White Mtn Apache P.D. NNPD Dilcon/Snowflake And all of Navajo and
Apache County Crystal clear.If Just entering Crown King Rptr On MCSO Does,nt work try entering the whole system or scan it;see what you can hit on.Butt anything past Black Canyon City;I only hit on crownking and occasionly Humbolt Mtn/Mt. Ord,Butt primarily on Crownking.I had a hell of a time trying to get my scanner at first to trunk Flagstaff p.d. When they switched Last time;finally i grouped Nau and flagstaff together;and it hit and took off;Get both crystal clear from anywhere from Cordes Jct all the way to east of Holbrook. Don,t know if any of this will help you or not;Don,t know what type of scanner you have and attenna,+Where exactly in flagstaff you live.Butt try that and see what you can hit on;butt on my tabletop mounted in my truck;I ca hear law enforcement/Medical For hundreds Of miles;I generally will start picking up New Mexico State police by the time i hit Holbrook.Occasionly as far away as winslow.

DEA also frequently uses Ch 4 Simplex (418.675) and Ch 6 Repeater (418.950 156.7PL) for steakouts in Phoenix. I have never heard them use encryption on these channels. Always analog in the clear.

Ch. 6 is active today as they watch someone.

16029. Looking to Purchase new Scanner

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2009-05-03 07:25:41 UTC
From: meathead28
Topic: 16029 Message: 16029

I will be looking to buy a new scanner in the next 2 weeks or so. If you guys could point me in the right direction I'd appreciate it. I've been out of scanning since PPD went to digital. Recently picked up my BC245xlt and want to get back into it.

I've been looking at a few scanners. I've narrowed it down to 3 so far. The three I'm looking at is the Pro 106, BC 396xt and the BC 396T. Anyone have one of these? I like the pro 106 but the Uniden look a little better. Is there much diff between the 396xt and the 396t? After looking I dont' see much at all but hey I've been out of it for awhile.

Mostly I'd like to listen to PPD and MCSO but at the same time I want a scanner that will roll with the changes too. $500 is a lot to spend with times rough as they are.

I found a place online with decent prices "scanner master" Anyone dealt with that company? The prices they have on all three are just under $500. I don't' think I can find a local place that could beat that pricing?

Any Help will be greatly appreciated.

Dana

Subject: [ArizonaScanner.com] Looking to Purchase new Scanner

I will be looking to buy a new scanner in the next 2 weeks or so. If you guys could point me in the right direction I'd appreciate it. I've been out of scanning since PPD went to digital. Recently picked up my BC245xlt and want to get back into it.

I've been looking at a few scanners. I've narrowed it down to 3 so far. The three I'm looking at is the Pro 106, BC 396xt and the BC 396T. Anyone have one of these? I like the pro 106 but the Uniden look a little better. Is there much diff between the 396xt and the 396t? After looking I dont' see much at all but hey I've been out of it for awhile.

Mostly I'd like to listen to PPD and MCSO but at the same time I want a scanner that will roll with the changes too. $500 is a lot to spend with times rough as they are.

I found a place online with decent prices "scanner master" Anyone dealt with that company? The prices they have on all three are just under $500. I don't' think I can find a local place that could beat that pricing?

Any Help will be greatly appreciated.

Dana

Believe me there is a difference.

I bought three RS scanners. None of them worked
right. The GRE worked out of the box.

Curious statement, considering that many RS scanners are made by GRE.
I have many PRO series and they all work fine for me.

I prefer the physical layout of the BCD396T & XT and prefer their
operating methods over the newer GRE's.

16034. Re: Looking to Purchase new Scanner

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2009-05-03 22:48:30 UTC
From: Joe Badura
Topic: 16029 Message: 16034

Hi Dana,

Any of the three scanners you mention will be able to monitor the systems of today. As far as a scanner to keep up with the changes, we will all be forced to upgrade equipment when systems change to utilize new technologies of the future.

I own a BC396T that I have had for several years and I love it. I literally use it every day. The only complaint that I have is P25 decoding could be better. However, I have read that the BCD396XT has better P25 decoding. I am still waiting a comparison on the RWC system for someone that owns both a T and XT.

BC396XT has a few new features that make it nicer for scanning large trunked systems with numerous sites, among other new features. Below is a link that highlights in bold the features difference between the T and XT.
http://wiki.radioreference.com/index.php/BCD396XT

I have not been interested in the Pro106 mainly due to it's physical size. The physical size makes the 396 very easy to carry. The Pro-106 and the functionally identical GRE PSR-500 are known to provide better P25 decoding than the BCD396T. Here is a link for the Pro-106 features:
http://wiki.radioreference.com/index.php/Pro-106

Use the links above to make your decision. I would say your choice should be between the Pro-106 and BCD396XT. Each radio has plusses and minuses. Overall it just depends on your preference.

Places to buy:
Pro-106 from Radio Shack. Wait for a sale and you can get it for $399.99 plus tax ($499.99 regular price). This makes the Pro-106 attractive as it is around $60 (figuring for tax) less than a 396XT. Also plan to spend some extra money for rechargeable batteries and the programming cable so the prices start getting closer overall.
BCD396XT - Best price I have seen is at CEI $489.99 (includes shipping). No taxes except for Michigan residents.
http://www.usascan.com/files/scanners.html

Hope this helps.

Cheers,

Joe

I have a 396T and a GRE PSR500.
I listen to the Phx PD from the east valley. The GRE does a better job receiving than the 396. In my honest opinoin its also easier to operate & the speaker sounds better too.

If you want a handheld I would purchase either the PSR500 or the BCD396XT which has more bells and whistles than the BCD396T along with better sensitivity and audio and seems to be on par with the PSR500. But remember this is only my humble opinion!

Topic: 16029 Message: 16038

Yes the Pro-106 is made by GRE just with a few minor changes. The GRE cable & software works with the PRO-106 and the programming is the same. About the only major issue is the PRO-106 can't receive the firmware updates from GRE, I assume you have to get them if available thru RS. I have a PRO-106 and really like it. a lot of people have complained that it is hard to program and use. I will admit that it is totally different than any Uniden scanner that I have ever used. However once I got used to the programming and how the scanner functions I liked it so much more than the traditional setup that Uniden used. The computer programming cable and USB driver ($35 from RS) will make programming much easier, you can do it by the keyboard but you'll be cross-eyed and numb fingers by the time you are done. Also the 800mhz antenna ($20 from RS) improves reception on the trunked systems.

US Military MAFFS (Modular Aerial Fire Fighting System) C-130's are training over Southern AZ.

MAFFS-1, -4, and -5 are currently training over the northern edge of the Santa Rita Mountains.
MAFFS-2 and -3 are currently training to the east of the Rincon Mountains, possibly near the Dragoon area.

Aircraft are staging from Tucson International Airport (TIA).

Great backyard view !

Training:
122.575mhz - Over Santa Ritas
122.225mhz - E of Rincons

TIA:
125.10mhz - TRACON
118.30mhz - Tower

Ok, an update for you on the training...

MAAFS-1 through -8 are here and are operating out of the USFS hangar in the NW area of Tucson International Airport. They are working in the "Little Rincon", "Fagan-North", and "Whetstone-South" areas today.

They have been working with the following aircraft:
Bravo-3
Bravo-35 - Kingair-38V
Lead-19
Lead-25 - Kingair-40P
Lead-49
Lead-57
Lead-88 - Kingair-181Z
Photo-1
Photo-2

Frequencies:
122.225mhz - Leads and MAAFS (Little Rincon)
122.425mhz - Leads and MAAFS (Whetstone-South)
122.575mhz - Leads and MAAFS (Fagan-North)
123.975mhz - Tanker Base at TIA and Air-to-Air Coordination
166.675mhz - Photo Coordination for aircraft on 122.575mhz
166.725mhz/131.8PL - MAAFS MOCC at TIA
168.25mhz/131.8PL - Unknown MAAFS Ground Coordination
168.65mhz/110.9PL - Tucson Flight Following with training aircraft (and other live response aircraft)

I was able to photograph all but MAAFS-5. He took-off, just after I left the area :<

16046. City of Peoria now on 700MHz, Simulcast G of the RWC

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2009-05-07 01:14:59 UTC
From: John H. Guetherman
Topic: 16046 Message: 16046

This is a follow-up to my question about a couple of 700MHz channels I was hearing a couple of weeks ago.

If you weren't yet aware of it, the City of Peoria, including police and city services, have gone to 700MHz.

If you haven't seen it yet, go to
http://www.radioreference.com/apps/db/?action=sysid&sysid=534

They are now using the new Simulcast G of the RWC. Control channels are 771.56875 (primary), 770.81875, 771.06875, and 771.31875 (alternates). There is also an intellirepeater in the far northwest of Peoria on 772.56875. (About milepost 12 on AZ74, Carefree Highway.)

At this point, it looks as if the former UHF conventional PD channels have gone silent. But I'll compare the two sets of channels.

Ch. 1 453.650 is now talkgroup 4141.
Ch. 2 460.125 is now talkgroup 4140.
Ch. 3 460.600 is now talkgroup 4139.
Ch. 4 460.600 is now talkgroup 4138.

4141 is (thankfully) still in the clear.

4140 and 4139 are encrypted. (RATS!)

I have yet to hear 4138. Radio Reference indicates it's a clear talkgroup.

There are many other talkgroups available to them. It looks like maybe 3 sets of 16 talkgroups each, although not all are listed. More than half are indicated to be encrypted.

I have not yet checked the former conventional 800MHz channels that city services used. I have heard a few talkgroups associated with city services however on the new system.

So, if you live in Peoria, or nearby, and enjoyed being able to monitor Peoria PD on their conventional UHF channels, you'll have to now reprogram your scanner(s) for the new Simulcast G. Or even bite the bullet and purchase a new digital trunk capable scanner if you have yet to do so. I'm glad I did so last year.

John
Peoria

16047. Re: City of Peoria now on 700MHz, Simulcast G of the RWC

From: John H. Guetherman
Topic: 16046 Message: 16047

I am now (just before 6am Thursday morning) hearing primary traffic on talkgroup 4136, which is labled "A6 Metro" according to Radio Reference. A couple of days ago, I heard encrypted ch. 2 traffic on talkgroup 4112 (before the UHF channels went silent) which is labled "C6 Metro".

This system is apparantly still a work in progress. I'm going to continue to use the "Wildcard" talkgroup function of my GRE PSR500 to monitor this system, and not program more than just the 4141 talkgroup in the memory.

Talkgroup 4140 just came up as ch. 2 again, after an officer requested to switch over. Still encrypted.

And yes, Radio Reference shows talkgroup 4140 as being patched to the old UHF ch. 1, and talkgroup 4141 being patched to the old UHF ch. 2. I haven't monitored this as being the case.

That's all for now.

16048. Old "newbie" requesting help getting back into hobby

Yahoo group: ArizonaScanner (2007 — 2012)

From: radiofaninarizona
Topic: 16048 Message: 16048

Hi. I still have my old Pro-34 that I used in another state, but I haven't used it for at least 15 years. I would like to get back into the hobby to listen to Scottsdale public safety and maybe a little Phoenix and/or Maricopa County. I live in far northeast Scottsdale, out by Pinnacle Peak. I'm thinking about buying the Uniden Bearcat BC370CRS radio scanner. I like this radio because I can also get regular AM on it. I really don't want to spend over $200 for a scanner. What does everyone think about this radio and would I be able to pick up Scottsdale frequencies on it? I am really rusty, so understand that I will not be up-to-date with the latest lingo. Any feedback is much appreciated. Thank you very much.

[mod note; This was JUST discussed in great length here. Check the message archives for the last couple of weeks.]

Buying a analog only scanner for monitoring public safety in the valley is going to become an expensive paper weight. If you want to monitor Phoenix, Scottsdale, Maricopa County S.O. and others you will need a digital capable scanner, around $500.

If you don't mind looking around, check out the pawn shops. Sometimes you might find one there for a lot less than a new one. I have also gone as far as to ask if they had one in pawn that might be coming out soon. Depending on the store, they might tell you. No warranty but prove it.

It depends on what you want to listen to, most of the valley PD's have gone to digital trunking. The fire depts are still analog, but are working on going over to digital systems. There are a few radios out there that work really well. These would be the GRE500,600. Also Uniden just came out with a new radio. These would be the 996 and 396XT. Unfortunately these run just over $500.00 with tax.

Any questions, please contact me off list.

If you want a handheld I would purchase either the PSR500 or the BCD396XT which has more bells and whistles than the BCD396T along with better sensitivity and audio and seems to be on par with the PSR500. But remember this is only my humble opinion!

From: Dan Danz
Topic: 16046 Message: 16056

Hurrah for you, John . You're blazing the way and sleuthing out things using all the resources (RR, this group, your radio's search ability, and your knowledge of how the department has operated in the past). My hat's off to you.

I have another tip for you -

There is a program, Pro96Com available on the net for free. You can use it to monitor almost everything that goes on for a P25 system, like this. The program works with a few of the PSR radios, and the 500 is one of them. The new BCD396XT has the ability as well. Using it, you can spot a radio system user radio by RID, and when that user says he's changing to another talk group, it's a piece of cake to see what new talk group his radio affiliates with. You can also see how they use patches and multi-selects.

Hello guys, can't figure this one out...

Village Vista School. falls under Paradise Valley school Dist. have looked under the FCC website and have scanned
Bus band on UHF and also MURS etc on VHF and can not find the schools freq. they use HT's that are simplex.
(have heard them talking and no hang time)

The crossing guards, duty aids etc use these radios.

anyone know this freq?????

Jeff

Just put the Peoria system in my scanner before I left for Phoenix this morning and happened to catch the 211 (armed robbery) at the Mcdonalds at 91st Ave & Union Hills. A1 4141 was used for the incident. Dispatcher instructed all units not responding to the 211 to switch to A2 4240, never tried to monitor A2 since I stayed on A1 trying to catch the location of the robbery. Did notice like you mentioned that C6 was encrypted, as well sounded like A3 was also. They don't have a very strong repeater, picked up the traffic at I-17 & the 101 and lost it once I got south of the city.

Check out the following list of 2 watt UHF channels they have a license for

451.3375
452.7625
456.3375
457.7625

SWFD is now in its 10th Edition, and is better than ever.

The SPD code listings are very comprehensive, as are those for all the other agencies. Sure wish they were more standardized. Some are, like Code 7 for a meal break, but an officer welfare check for DPS is Code 20 and for SPD, it's Code 900.

I agree and most of your central and northern az agencies yet use alot of other codes ;butt and code 20 and 900 for the most part is pretty standard on most agencies;New mexico they like to use the term everything is 10-4 or i,m 10-4;that bugs the shit out of me.anybody have any advice on the new radio shack scanner (Digital) versus the psr 600 or 500;as far as open capabilities and performance.have,nt bought any of them yet;butt i will be soon.

16067. Any idea when Scottsdale fire, police, and ambulance will switch to digital?

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2009-05-13 00:35:07 UTC
From: radiofaninarizona
Topic: 16067 Message: 16067

I plan to eventually get a digital scanner, but in the mean time, I'm wondering if the Uniden Bearcat 370CRS will do so that I can receive some frequencies. According to www.radioreference.com, "Scottsdale uses the Maricopa County Trunk System." Does that mean I can or cannot receive traffic from Scottsdale on the BC370CRS? Rural Metro Fire uses frequencies that start with 154, so I should be able to receive those, right? Thanks for any feedback.

That unit will NOT 'trunk track'.
Conventional only.

Sorry, looks like a paperweight for Scottsdale PD.

There is plenty of other stuff you can still listen to.
Especially fire.
Game and Fish, Dept of Agriculture, DEA, school districts, amateur repeaters
[especially SkyWarn].................
And my own humble agency, DPS.

My personal opinion is that paying more than $50 for an analog/conventional
only scanner is a waste.

16069. Re: City of Peoria now on 700MHz, Simulcast G of the RWC

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2009-05-14 00:08:04 UTC
From: John H. Guetherman
Topic: 16046 Message: 16069

In my scanlist for Phoenix PD, I'm seeing TG 4141, Peoria PD Ch. 1, popping up in a wildcard search, even though I DON'T have the Simulcast G frequencies programmed into that scan list alongside the other simulcasts I have programmed to monitor Phoenix PD. (A thru F.)

So, Peoria PD may be popping up on Simulcast E (West Valley), or even Simulcast A (PHX PD), as well as Simulcast G (Peoria). Which makes sense since they're all linked.

~~~

And as a side note, quite a bit of traffic on TG's 3225, 3226, 3227 of the RWC in regards to the ASU commencement ceremony this evening, as well as the POTUS visit. Multiple agencies involved. DPS, Tempe PD, Peoria PD (a motor officer), "Light Rail 1", are some ID's I've heard.

From: Charles Simmont
Topic: 16070 Message: 16070

I was curious so I started monitoring the Simulcast E system on the RWC with just a wildcard to see what would pop up if anything? Well I was rather suprised since I didn't think they were using this system much. I cross checked the TG's with what is shown on the Radio Ref Mariocpa County page and this is what I found. Some of the TG's only popped up for a second, others were very audible and others were encrypted.

2842 - Unknown Possible Event Channel?
2843 - J Deck Event Security was being used for the Pres in town
2844 - J Deck Event Security was being used for the Pres in town
2964 - Phx PD C Deck4

Yes agreed, I think we have discussed this same issue before. A conventional scanner in the valley for monitoring public safety (PD & Fire) isn't going to pick up very much. Phoenix is still using their conventional VHF system, but they are set to go to 800Mhz by the end of the year so I am told. That would only leave Rural Metro, DPS, AirEvac, and a couple of small FD's. Not much point in buying something that is going to become obsolete soon. I'd say buy a Digital Trunktracker that scan systems in the 700mhz band. Anything less is just a waste of money if you want to listen to a majority of the emergency services in the valley.

As a side note to this, I am the DB Admin for Arizona on RadioReference. I received the following information which might make sense of some of the things that you are seeing:

"...in the future simulcast E will be rolled into G as soon as the sites are upgraded...after the upgrade each site will have 18 frequency pairs, then later 30..."

Enjoy

From: Radio Nerd
Topic: 16073 Message: 16073

Howdy, I'm new to the area so I've been researching what's available to listen to with my trusty, but old scanner. I've poked through RR, the archives for this list, and the Internet as a whole and I've come up with some possible frequencies. Since the aforementioned old trusty scanner requires everything to be entered by hand, I thought I'd run what I've come up with past you grizzled veterans to reduce (or even eliminate!) lengthy sessions of re-entering or removing frequencies from the scanner. I've tried to ensure that the radio users listed here have not migrated to a trunked system, but if I missed someone, please let me know. No point in tying up channels for frequencies no longer in use. Any info on CTSS tones missed (or incorrect) would also be appreciated. If I receive any additions or corrections to this list, I'll be sure to post a final edited list to the group for the archives in case there are folks in the future who are looking for the same information. At that time, I'll also include the fairly undisputed frequencies I'm adding to the scanner, such as GMRS/FRS, MURS, federal interoperability (VTACs, UTACs, ITACs), Inter-Squad Radio (ISR), and so forth. One question right away - I've seen Phoenix Fire channel 15 referenced in a few spots, but I can't seem to locate a frequency for it.

a couple more good freq's in the airband..

122.750 North Practice area.. (North of McDowell Mtns.
from cave creek to Fountain hills)

122.850

South Practice area..

just south of chandler airport.

They are actually broken down by NE and NW

SW and SE..

the locations of the north I have are for the NE practice area. I am not up to date on the breakdown of NW SW and SE..

Jeff

Subject: [ArizonaScanner.com] Analog Scanning in Phoenix

Howdy, I'm new to the area so I've been researching what's available to listen to with my trusty, but old scanner. I've poked through RR, the archives for this list, and the Internet as a whole and I've come up with some possible frequencies. Since the aforementioned old trusty scanner requires everything to be entered by hand, I thought I'd run what I've come up with past you grizzled veterans to reduce (or even eliminate!) lengthy sessions of re-entering or removing frequencies from the scanner. I've tried to ensure that the radio users listed here have not migrated to a trunked system, but if I missed someone, please let me know. No point in tying up channels for frequencies no longer in use. Any info on CTSS tones missed (or incorrect) would also be appreciated. If I receive any additions or corrections to this list, I'll be sure to post a final edited list to the group for the archives in case there are folks in the future who are looking for the same information. At that time, I'll also include the fairly undisputed frequencies I'm adding to the scanner, such as GMRS/FRS, MURS, federal interoperability (VTACs, UTACs, ITACs), Inter-Squad Radio (ISR), and so forth. One question right away - I've seen Phoenix Fire channel 15 referenced in a few spots, but I can't seem to locate a frequency for it.

The format is FREQUENCY | CTSS | Description Here's hoping that the formatting holds!

MED 9 and 10 are operated by Phoenix and Tucson Fire Departments [both channels in both places].

MED 1-8 are controlled by DPS.
I happen to know that MED 2 is quite busy in the NE valley for ambulance/hospital traffic.
MED 5 is the 'calling' channel.

There are station location maps in the files area.

Some additional frequencies for Mesa Fire department, and Rural Metro Fire. The med frequencies are not used very much but are tested on a regular basis. Most EMS calls to hospitals are done via cellphones currently.

Ch. 1 Mesa FD, Main Dispatch-------154.340-------Mesa, Arizona
Ch. 2 Mesa FD, Fireground-------154.235-------Mesa, Arizona
Ch. 3 Mesa FD, Primary Fireground-------153.950-------Mesa, Arizona
Ch. 4 Mesa FD, Mutual Aid-------154.280-------Mesa, Arizona
Ch. 5 Mesa FD, Fireground-------154.010-------Mesa, Arizona
Ch. 6 Mesa FD, Fireground-------154.175-------Mesa, Arizona

Ch. 1 Rural Metro FD, Main Alarm
Dispatch--------153.890-------Maricopa County, Arizona
Ch. 2 Rural Metro FD, Main Alarm
Dispatch--------154.370-------Maricopa County, Arizona
Ch. 3 Rural Metro FD, Fireground-------154.385-------Maricopa County, Arizona
Ch. 4 Rural Metro FD, Mutual Aid-------154.280-------Maricopa County, Arizona
Ch. 5 Rural Metro FD, Fireground-------154.400-------Maricopa County, Arizona
Ch. 6 Rural Metro FD, Fireground-------151.865-------Maricopa County, Arizona
Ch. 7 Rural Metro FD, Mutual Aid-------158.805-------Maricopa County, Arizona
Ch. 8 Rural Metro FD, Mutual Aid-------154.160-------Maricopa County, Arizona
Ch. 9 Rural Metro FD, Fireground-------154.385-------Maricopa County, Arizona

And if you live in the southeast valley you can probably pickup some of the Pinal county units. I frequently also hear Oracle Fire/EMS being dispatched. I live in the Loop 202 & University area.

I've actually heard what sounded like a gold course operating on MED 5
from my home in Gilbert. It comes in pretty clear.

Really?
Anyone else hear that?

I had a car dealership operating on Med 2 with radios they bought over the internet.
And I had an electrical contractor on DPS State using rented radios.

Cox Cable used to carry video from the shuttle and from Mission Control, but I cannot find it anymore. It's not on the Cox channel line-up. Does anyone know if NASA is on a TV channel for certain hours? Thanks. I have found the video on the Internet and I found the audio feed on Reciva. It's interesting to hear the astronauts working on the repairs/improvements to Hubble.

I am in Yuma and I have Time-Warner cable. NASA is on channel 71. I have it on 24-7 any time there is a mission in progress.

Is there any radio traffic from our space program that can be heard on a scanner? My wife and I used to listen to the cosmonauts on MIR back when it was in orbit. My wife is Russian and I can understand some Russian, so it was interesting. I would watch the NASA website so we would know where it was. When it passed over, we would listen and almost always hear their communications.

Med 9 is coordination channel utilized by Phoenix Fire in the Phoenix Metro area and patch channels used by Phoenix are med 3, 6, 7, 8. DPS does not utilize those channels in the Phoenix Metro area. All ambulance and Fire Depts in the Metro area go through Phoenix Fire to set up patches, although some of the outlying areas still go through DPS.

16086. Peoria PD's new system

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2009-05-19 09:04:30 UTC
From: Chris
Topic: 16086 Message: 16086

I appreciate the guys who have posted info on the new system.
Overall, I'm going to give my review of the system.

The reception right now is very spotty, and I'd even go as far as saying crappy. I live on 67th & Peoria, and the signal bounces everywhere from nothing to full every second with my 396 & 996. Obviously they need to use more towers or up the transmitter power ☐ another poster posted how he lost the signal just outside of the city ☐ AFAIAC the signal should not be unreceivable until you are at least 5-10 miles out of the city, but that's up for negotiation.

The encryption on most of the channels bothers me. I understand that it is necessary for the protection of officers when doing surveillance, undercover or other very serious work, but as said the majority of the channels are encrypted and I feel this is more PD paranoia than necessity. For example, the Chase channels are encrypted ☐ one of the fun things for us to listen to is the Chases and Major Incidents ☐ both of which are encrypted.

Of course, the PD can counter with "Officer Safety", but how many thugs out there want to listen to them being chased, let alone purchase a $500+ scanner that they probably couldn't figure out WTF to do with? It's not as simple as simply poking in a frequency number as in the old days anymore.

I was thinking the other day that scanning is getting a lot less fun and with all the channels being encrypted on the major systems, it honestly doesn't make sense to pay for or use a scanner anymore since you can't hear much.

I honestly plan to write a letter to the Chief to see if we can get some of these channels unencrypted, however doubtful

I'd like to hear what you all have to say about the issue.

Chris

I don't pretend to speak for the PTB at Peoria, but I can speak from the other side of the fence.

Are you a user on the system?
If not, then any criticism of their system is unwarranted.
It's purpose is NOT to accommodate scanner listeners, but the cops and other city workers that use it.
If it works for them, then it's designed correctly.

As to the 'thugs' buying $500 scanners, you are seriously mistaken.
Happens all the time. And the more hard core they are, the more likely it is to happen.

WalterH

PS: It was my understanding that it was actually the media that got the Phoenix patrol channels unencrypted.

From: Joe Badura
Topic: 16086 Message: 16089

To claim that the system is defective based on the performance of a scanner is not valid. The professional radios are night and day in terms of sound quality and performance. This also accounts for the $3000+ price tag of these professional radios. There is not currently a scanner that can handle a simulcast system like a professional radio. Our scanners are often subject to interference or multipathing, where the professional radios are more effective at processing the signals.

With regards to coverage, they Peoria G simulcast is a new site on the RWC. It does not need to cover anything more than Peoria. When system users leave Peoria, they will affiliate on one of the other system sites. The Peoria radios will work throughout the entire valley roaming on other RWC sites.

I know your pain. I am very disappointed in the audio quality of Phoenix PD on Simulcast A or Tempe PD on Simulcast F listening on my BC396T. Each newer model of scanner seems to do a better job, but they still are not at the same quality level as a real radio.

Regarding encryption, I have also heard it was the media that persuaded Phoenix to remove encryption from the C deck chase talkgroups. If we can get enough people behind us, then maybe we can make a difference. Be prepared for a tough fight if you want protest encryption. Once you are done with Peoria, then you can help fight the same battle with Mesa and Tempe who have encrypted "Hot" talkgroups. I'm guessing when the new Buckeye, Scottsdale, and Chandler systems come online, they will also have encrypted HOT talkgroups. Encryption is widely available and cheap on the new systems. As Walter stated in the previous message, the system is designed for the needs of the users, not the wants of us scanner listeners.

Hi Kenneth,

You will hear the Peoria talkgroups on any site where there is a peoria radio affiliated and the talkgroup selected. Users can roam to other sites on the system as necessary.

I have heard talkgroup 4141 on Simulcast B and F too.

So Phoenix PD is P25 fully encrypted now? I guess there is not much use
in buying a P25 scanner if PPD is your main interest.

Thanks,
Mike

From: Mallard
Topic: 16092 Message: 16092

Greetings,
I picked up a BCD 396T and am working on programming it up with local frequencies.

I have most of MFD's channeles, they run dispatch through Phoenix. I am having a hard time finding MPD info on the web.

Does anyone know what the specifics are?

Also, if anyone has any tone info for MFD, I would love to weed out some of the background noise from PFD dispatch.

Thanks in adance.

"Mallard"
As a Maricopa resident, I can tell you that the Maricopa Police Department operates on 154.220 (repeater) and can also be heard on 150.805 (simplex). The nearby Ak-Chin Indian Community Police Department is on 158.730.
I hope these frequencies are of help to you in your monitoring.

From: BP
Topic: 16086 Message: 16094

Having previously been in the media both on an assignment desk and as a photographer and now freelance for media, the method used by the media is a bit unique for Phoenix and I do not envision all the agencies budging on the decision to encrypt the channels.

When Tempe first started there were talks of having everything encrypted, we asked to remove it from the hot channels and that request was denied. The reasoning being that the initial call gets sent out over a patrol channel in the clear and that should be enough for the media to get interested. Not true though as an initial call of an active shooter, moved to encrypted, may turn to be a kid with a bb gun and all the units clearing.

There was chatter from some in the industry that the channels are public information and thus fought via the FOIA process, however as I'm not a lawyer regardless that idea seems a bit extreme stretch of FOIA's principles and purpose.

One medium I've suggested to PIO's in the past and gotten some eye raising was the cad setup like CHP has in California - http://cad.chp.ca.gov <http://cad.chp.ca.gov/> , I suggested this to Lt Warren once at a scene with DPS and it was going to be looked into, but not sure if it ever did.

It would allow media and the public to satisfy curiosity on active incidents without numerous calls concerning "whats going on at xyz location".

But to get back on topic, the gist is it's a very very uphill battle getting them to remove encryption, agencies now have a tool or some may call it a "toy" they can use to keep operations private and out of the publics ear. And like anyone with something new, it's something they find useful and functional.

Phoenix PD is using a P25 system now, however not everything is encrypted. Most detective, SAU/Swat, & other sensitive info is encrypted. A majority of the A, B, & C decks where you will find the precinct and chase channels are unencrypted and you can monitor them easily with one of the P25 scanners available.

Radio Reference shows Maricopa PD on 154.740 no tone listed and I haven't been near there to search for one. Their FD Tac channel is usually Ch8 153.770 with a tone of 173.8

Hope that helps.

"Mallard",
Fortunately, the Maricopa Police Department is NOT using a trunked system. They are one of the few remaining departments in the 'Valley" not using such a system.

John

16099. MCSO

Hello, Received my new BC 3967xt last night. So far I'm impressed. Haven't learned all the bells and whistles but am getting there. I used Freescan to program Phx PD and some others. Nice program, makes things alot easier. I'm having trouble finding out what freq's to plug in for MCSO. I'm currently using Mt. Gillen but can't hear anything as of yet. I'm around 35th ave and Union hill so I thought I'd use Gillen but no luck. Any help greatly appreciated.

16104. Re: [ArizonaScanner.com] MCSO

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2009-05-21 00:29:44 UTC
From: Joe Badura
Topic: 176 Message: 16104

Hi Dana,

As mentioned in a previous post, the White Tanks site is the best for the West valley. Program the "Trunk Frequencies" 868.9125 and 868.9375. 868.9125 is the current control channel.

Make sure the system is programmed as "Motorola Type 2 800 MHz Standard". This is not a true Motorola APCO25 system like the RWC.

The DB link you provided contains the talkgroups that you will need.

Hope this helps.

Joe

Subject: Re: [ArizonaScanner.com] MCSO

Hi Dana,

As mentioned in a previous post, the White Tanks site is the best for the West valley. Program the "Trunk Frequencies" 868.9125 and 868.9375. 868.9125 is the current control channel.

Make sure the system is programmed as "Motorola Type 2 800 MHz Standard". This is not a true Motorola APCO25 system like the RWC.

The DB link you provided contains the talkgroups that you will need.

Hope this helps.

Joe

Topic: 176 Message: 16106

I'm not familiar with FreeScan but the trunking type shouldn't have
P25 in it at all, it should strictly be Motorola Type 2.

"Mallard",
Fortunately, the Maricopa Police Department is NOT using a trunked system. They are one of the few remaining departments in the 'Valley" not using such a system.

Anyone have any info on Glendale PD? RadioRef doesn't have much. I'm pretty close and should be able to hear them fine. BTW the new 396xt is coming along! It sure is nice to hear Phx PD again. So far i am impressed with the new radio.

Hi Kenneth,

For the most part, in order to listen to Peoria, you will need to listen to Simulcast G. In order to listen to Tempe, you will need to listen to Simulcast F. You will *occasionally* hear Tempe or Peoria talkgroups on other sites when users from the system are affiliated with a different site. Talkgroups are systemwide, but a user must be affiliated to a site before you will hear the talkgroup on the site.

Here are some links that explain how Motorola SmartZone systems work.

http://wiki.radioreference.com/index.php/Motorola_Type_II_SmartZone
http://www.freqofnature.com/SmartZone101.html
There is also an excellent description of these types of Trunked systems in the Southwest Frequency Directory.

I hope this clears things up.

>

Kenneth, where are you trying to monitor the Town of Maricopa from? The town is located south of South Mountain, on the border of Pinal and Maricopa counties. (I think actually in Pinal County.) Their police radio system probably isn't designed to be monitored from "metro" Phoenix. South Mtn probably blocks the transmissions receiveability to the north.

I've not tried to monitor them, (and I only monitor Yavapai County Sheriff when I'm up there), but I doubt I'd hear them up here in Peoria due to South Mtn and the Sierra Estrellas being in between Maricopa and me.

Phoenix fire has transmitters on top of South Mtn so you can hear Alarm dispatching and talking to Maricopa FD units, but you wouldn't hear the units themselves unless you were within a couple miles of them. (Units 571-574)

Hi Folks,

This is a great resource for the scanner aficionado. I just wanted to add that there is an iphone app that lets you stream the audio from scanners from all over the country, Its 99cents and is called Emergency Radio, v1.1, from EdgeRift, Inc. Its a neat application but the iphone is a real battery eater. Otherwise its pretty neat...

Cheers All!

From: Mike Lanning
Topic: 16130 Message: 16130

Does anyone know whats up with AirEvac 31 from Prescott,

They lifted last week using call sign A/E11 enroute to Sky Harbor and havent been back. Did they close Prescott Base or are they down for maint.

Their O2 tanks, battery cart, and lights are still sitting by fence at Prescott airport.

A/E is usually first up for Chino Valley and up north over Native due to closer loc. And there is a doc at the hospital who refuses to use Native when doing heart cath. He will call in AirEvac or Guardian to standby even if Native is in quarters
Thx
Mike

Regarding the Fire Tone Out info, according to a post in a Radio Reference forum, Phoenix dispatch uses dedicated phone lines to tone each station, so you can't use the Tone Out feature to just listen to Chandler, Tempe or Maricopa. According to the post, the tone you hear on 154.19 is the same for all units and is just to alert units on the road to listen up.
I share your pain

16132. RE: [ArizonaScanner.com] MCSO

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2009-05-23 19:14:04 UTC
From: Dan Danz
Topic: 176 Message: 16132

Mt Gillen is a fill-in site and only carries talk groups when a unit affiliates with it.

If you have a 396XT, you should program the following three sites IN THE SAME SYSTEM (the talk groups will be the same). You can get the data from Radio Reference.com. These three sites force-carry all the major law enforcement talkgroups whether or not somebody affiliates with them.

White Tank (White Tank Mountain Park)

Thompson Peak (North Scottsdale)

Central Courts Building (downtown)

You could add Mt Gillen as a separate site and that way you might get a few things what aren't forced on to the main towers.

If you put them on different SQK's you can enable/disable them depending on which one you're getting the best reception on, or you can just let the 396XT scan all of them. Better yet, hook a GPS to it and let it enable/disable the sites as you move around.

Hello, Received my new BC 3967xt last night. So far I'm impressed. Haven't learned all the bells and whistles but am getting there. I used Freescan to program Phx PD and some others. Nice program, makes things alot easier. I'm having trouble finding out what freq's to plug in for MCSO. I'm currently using Mt. Gillen but can't hear anything as of yet. I'm around 35th ave and Union hill so I thought I'd use Gillen but no luck. Any help greatly appreciated.

Dana

Since we went to MDTs in the patrol units, radio traffic is SIGNIFICANTLY reduced. Us dispatchers get to take a breath now and then. :-) Before that, the main channels were terribly busy; we worried that somebody was going to get hurt because they couldn't get on the radio.

Yes I know exactly where the town of maricopa is; I,m a native of the valley and for about 10 Years;I drove through Maricopa every morning;I have my 2096 set up;so as to monitor everything around me ;that i,m able to monitor, Law enforcement and FD/Medical stuff only;And when i first learned there was a maricopa P.D. a year or so back;I started experimenting to see what i could get. So i was just adding a comment on what i was recieving. I only get Maricopa PD on (154.2200) I don,t seem to get them on any other frequency;Reception seems to come and go; And i get them as far away as Verde Valley.So anyway,Thats all i was trying to Say.

>

Kenneth, where are you trying to monitor the Town of Maricopa from? The town is located south of South Mountain, on the border of Pinal and Maricopa counties. (I think actually in Pinal County.) Their police radio system probably isn't designed to be monitored from "metro" Phoenix. South Mtn probably blocks the transmissions receiveability to the north.

I've not tried to monitor them, (and I only monitor Yavapai County Sheriff when I'm up there), but I doubt I'd hear them up here in Peoria due to South Mtn and the Sierra Estrellas being in between Maricopa and me.

Phoenix fire has transmitters on top of South Mtn so you can hear Alarm dispatching and talking to Maricopa FD units, but you wouldn't hear the units themselves unless you were within a couple miles of them. (Units 571-574)

John

From: APSN18
Topic: 16086 Message: 16136

Peoria is also on Simulcast E as well as G. Somebody here said they were going to merge G & E into one system someday. Peoira PD is now using A6 4136 as Dispatch instead of A1 4141 due to coverage issues.

As with all of the systems in the valley your ability to monitor them will depend on several factors. Power of the repeater, your location, and your antenna have a lot to do with it. I personally have to use a roof antenna at home and a mag mount antenna in the truck in order to hear most things. Rubber duck antennas work ok, but anytime you can get an the antenna higher in the air away from obstructions and interference you will increase your reception.

Subject: Re: [ArizonaScanner.com] Peoria PD's new system

Hi Kenneth,

For the most part, in order to listen to Peoria, you will need to listen to Simulcast G. In order to listen to Tempe, you will need to listen to Simulcast F. You will *occasionally* hear Tempe or Peoria talkgroups on other sites when users from the system are affiliated with a different site. Talkgroups are systemwide, but a user must be affiliated to a site before you will hear the talkgroup on the site.

Here are some links that explain how Motorola SmartZone systems work.

http://wiki.radioreference.com/index.php/Motorola_Type_II_SmartZone
http://www.freqofnature.com/SmartZone101.html
There is also an excellent description of these types of Trunked systems in the Southwest Frequency Directory.

I hope this clears things up.

Does anyone have updated frequencies for the following airline ground station operations? Some online lists have conflicting and/or outdated information:

Horizon Air - Flagstaff
Horizon Air - Prescott
Mesa Air - Flagstaff
Great Lakes Airlines - Prescott
Great Lakes Airlines - Kingman

Thanks.

Not sure about the dedicated phone line to tone each station, but I do know that the tones you hear before the dispatch on Ch1 vary depending on who they are dispatching. If there is a 1st or 2nd alarm (or more) then there are even more tones that go out. On page 133 of the SWFD there is a list of some pager tones that are used for the voice pagers (minitors I am assuming). Not sure if that would be what you are looking for or not.

Regarding the Fire Tone Out info, according to a post in a Radio Reference forum, Phoenix dispatch uses dedicated phone lines to tone each station, so you can't use the Tone Out feature to just listen to Chandler, Tempe or Maricopa. According to the post, the tone you hear on 154.19 is the same for all units and is just to alert units on the road to listen up.
I share your pain

16144. Sky Harbour 133.700

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2009-05-25 18:01:29 UTC
From: Joe Badura
Topic: 16144 Message: 16144

I am trying to understand the North Ground frequencies for Sky Harbour. Hopefully there are some air buffs that can help nail this down.

119.750 is well documented as a ground frequency, and in many sources is described as "Ground North". The North ground controller is also often simulcast on 133.700. SWFD has 133.700 defined as "Emergency Use (Fire Units to Pilots)". I have also seen 133.700 described in some aircraft forums as "Northeast Ground". Listening today, I am hearing the Controller simulcast on 119.750 and 133.700, but only 119.750 is being used by planes.

Is 133.700 only an Emergency use frequency or is this used for other routine ground traffic, such as "Northeast Ground"?

Thanks,

Joe

I use the BCD396T on the MCSO and have I-call enabled along with the wildcard and used to get a ton of I-call traffic. I know longer pick up anything.

Has MCSO changed the way or eliminated i-call traffic? or is it all going through the MDT's now?

Date: 2009-05-26 02:18:48 UTC
From: Dan Sokol
Topic: 16144 Message: 16147

33.7 is also used during high capacity times. We have several "banks" during the day when a large number of aircraft are pushing from gates and other aircraft are trying to get into those gates all at the same time. To alleviate controller work load, 119.75 is used as "inbound" and 133.7 is "outbound". After we get to the south side the controller is only dealing with "outbound" so we switch to 132.55.

So far it only happend the whole night of 5/25... it was morse code, and was broadcasting over and over. At first I though it was the radio information(song name,etc) but I did hear it repeat and the end of each rapid broadcast the end of message code aka (.-.-. --.-). It wasn't a CQ and it had numbers in the broadcast as well.

I'm an amatuer radio operator but the morse code was broadcasting a good 35-40 words a minute. The funny thing is it was very faint and you had to turn up the radio or filter it to hear it clearly. Could have been a tty or even a rtty terminal that was broadcasting off the signal or close to that frequency.

Hi Dan,

Thanks for the great info! Since departures primarily occur on 7L/25R, 133.7 would be considered a South Ground control frequency. Is this correct?

Now, what about another rarely used ground control frequency at Sky Harbour ☐ 134.85. Is this used for anything other than emergencies or incidents?

Regards,

Joe

Joe,

South ground is always 132.55. You will hear us call "on the bridge" which is the overpass for the terminal access road. 133.7 is only used for outbound traffic on the north side during high traffic banks. Once on the bridge we switch. If we are inbound and land on the south, 7R/25L, they don't even tell us to call south ground. We wait till we are north on taxi way Romeo/Tango, then call north/inbound on 119.75. Basically, cut the airport in halve with an east/west line. North of the line/roads we use 119.75 or 133.7. South of the line/roads we use 132.55. Sky Harbour has "Coded Taxi Routes" to ease radio congestion. So you will hear "Cactus ###, taxi 7L south route" "South Route" for 7L, from our ramp areas reads, "Via C taxiway, turn south on S. When established on S change to 132.55 and hold short of D" When the south controller figures out your sequence he/she will clear you to continue to 7L, via the south route. (Which is right on D left at D8 right on E to the end)

I have, in 10 years, never used 134.85 and don't even see it in my charts. I'll take that as a good thing!

I know this was a little windy, but I hope it makes sense so you can follow along a bit easier.

Dan

Hi Dan,

Excellent information! This clears up a lot of things.

I do have a last set of questions about taxi routes. I often hear references to "East Route" and "West Route". Can you elaborate on these similar to your description of the South Route? Any other well known taxi routes that you can share?

Thanks again for your great info!

From: Joe Badura
Topic: 16153 Message: 16153

Today I monitored a new RMFD Frequency. 155.805 114.8 PL. This is a repeater. District 822 and District 823 were working a house fire. I did not get an address, but I believe these are Fountain Hills district numbers.

Everything that is currently documented points to 159.240 PL 100.0 "Ch3 Car to Car ☐ Scottsdale". I'm thinking that maybe this freq is no longer used since RMFD is no longer covering Scottsdale.

The units and dispatch were referring to 155.805 114.8 PL as "Channel 3". Can anyone confirm if 155.805 114.8 PL is currently RMFD Channel 3?

Regards,

Joe

16154. RE: [ArizonaScanner.com] I-Calls

Yahoo group: ArizonaScanner (2007 — 2012)

From: Dan Danz
Topic: 16145 Message: 16154

MCSO per se almost never uses I-call .. 99% of the users don't know how to use it and were told not to use it. Dispatchers use it to make a deputy's radio beep when he's not responding to welfare checks.

There is a phone patch that might appear as I-call to you, but that is county-wide function. I hear Animal Control people using it to call their dispatcher (whey they don't just talk to the dispatcher on their dispatch talk group has always mystified me), and I hear Juvenile/Adult probation folks checking their voice mail.

I think you might hear Scottsdale PD using I-call unit to unit.

I use the BCD396T on the MCSO and have I-call enabled along with the wildcard and used to get a ton of I-call traffic. I know longer pick up anything.

Has MCSO changed the way or eliminated i-call traffic? or is it all going through the MDT's now?

From: John H. Guetherman
Topic: 16155 Message: 16155

I'm curious as to which talkgroup(s) Maricopa County DOT REACT units use when they're shutting down a roadway for one of the PD's or MCSO? Operations 10224? Responses 10256? Barricade Ops 10288? Something else?

Does any group within MCDOT still use the VHF conventional repeaters on 159.195 or 160.110?

For those not familiar with them, REACT is the Regional Emergency Action Coordinating Team of MCDOT. Similar to ADOT's ALERT teams, they are trained to control traffic around accident scenes or other emergencies, freeing up law enforcement officers so they don't have to. Here's a news article on them:

I am thinking of buying a Uniden BC246T. I did a seach but the most recent post that mentions this radio is from 2005. It was recommended to me recently by a fire fighter in California. I haven't seen one yet, but it sounds like it has all the features I want and it is a LOT cheaper than the $500 I thought I had to spend. My areas of interest are Scottsdale Fire and Police, Phoenix Fire and Police, and maybe Carefree and/or Cave Creek. Does anyone have any feedback on why this radio would not be a good choice for me? Thanks so much.

That radio won't monitor Phoenix Police. You need a digital scanner
for that.

The BC246T is perhaps my single favorite analog-only scanner. But based on what you have listed as your areas of interest, it would not be a good choice for you. It does not decode P25 digital audio or P25 trunked systems, so you would not be able to monitor Phoenix Police (which is on a P25 digital trunked system) or MCSO - which covers Carefree and Cave Creek and uses P25 digital audio on a mixed mode trunked system. However, you would be able to monitor Scottsdale and Phoenix Fire (which are analog non-trunked on VHF) and Scottsdale Police (which is analog on the same mixed-mode trunked system on which MCSO is digital).

Where are you located? Depending on your location you may or not be able to hear them at all. Peoria PD mainly uses A6 (forgot the TG) for dispatch insted of A1 4141. Simulcast G is a fairly weak repeter system unless you are in the Northwest valley. I use Simulcast E to hear them in Buckeye, have heard reports of them being heard on some of the other simulcast systems as well.

Pro-96 will not follow a 700mhz trunk system like the Simulcast G system. You will need a Pro-106, GRE 500, or Uniden BCD396T or XT.

OK, I am lost I guess. The 700 meg system is not P25 - is that it? The radio accepts the frequencies.

Also, i just heard Peoria on Simulcast B - TG 4141

83rd ave & Encanto

am being told my PRO-96 will not work with 700 meg system. I guess Simul G is out, as I am not buying a new radio. Pro-96 works well enough for the departments that really matter to me.

--- In ArizonaScanner@yahoogroups.com, "APSN18" <apsn18@...> wrote:
>
> Where are you located? Depending on your location you may or not be able to hear them at all. Peoria PD mainly uses A6 (forgot the TG) for dispatch insted of A1 4141. Simulcast G is a fairly weak repeter system unless you are in the Northwest valley. I use Simulcast E to hear them in Buckeye, have heard reports of them being heard on some of the other simulcast systems as well.

16169. BCD396XT Batteries

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2009-05-31 22:22:38 UTC
From: meathead28
Topic: 16169 Message: 16169

I wanted to get another set of rechargeables for my scanner but am at a loss of what kind will work with the charging system. On one of the batteries that came with it has 2250mah on it. I went out today and could only find energizers that were 2450mah. will those work with the scanner charging system? I don't want to short anything out.

Dana

From: Jon M. Hanson
Topic: 16169 Message: 16170

The charger in the scanner is just time-based. After 12 hours or so (I don't know the exact time) it will stop charing the batteries. This isn't very good on rechargeable batteries because unless they are completely dead you'll be overcharging them and shortening their life. You'd be better off spending $30 on an intelligent charger that senses when the battery is completely charged and stops charging it.

The system is a P25 system. While it'll accept the 700 MHz frequencies (once unlocked by a program like Win96), the Pro-96 is unable to track these.

In the Files section of this Group's website, look for "AZ Highway Patrol Maps<http://groups.yahoo.com/group/ArizonaScanner/files/AZ%20Highway%20Patrol%20Maps/>" .

The maps have frequency information on them.

From: W8MIA
Topic: 16178 Message: 16178

I live in the GV area and felt after 10 years I had all of their VHF Fire Dept. frequencies including their mutual aid freq's etc.. Every now and again one truck or car will ask another to go to channel "5" which I have searched for in the radio records as well as scanning for it on the air, no results.

It also does not seem to be a code to use the cell phone as they usually speak in the clear about that. All help for Golden Valley, AZ FD channel 5 will be appreciated.

I've scanning (Mostly Peoria) for over 20 years and found this group when my scanner "went dark". Thanks for all information.
If I continue my hobby, I'm leaning towards the GRE 500, unless there is another less expensive alternative any advice is welcomed.

16181. RE: [ArizonaScanner.com] Thanks

Topic: 16180 Message: 16181

Unfortunately the best advice I can give is to spring for the GRE, it'll last you quite a while sans anything unusual on the horizon, it's easy to use, and GRE is good on the updates for tuning it. In fact they just released 1.7 for the firmware no major changes but they actually support the radio and work with the users to get items fixed.

To get your fix until you get a radio there's several streaming sites running AZ feeds , one site I suggest is Scanarizona.us it has a good variety from each county.

Not having any problems hearing them here. What sites are you using for the control channels? I use White Tanks, Thompson Peak, and the Central Court Bldg tower.

My scanner has went deaf on MCSO. Have they changed control channels or I think I may have changed the system type. Can anyone confirm what the system type should be.

Thanks

With some of MCSO's TG's being APCO 25, do you have to program an different APCO25 Group to receive those or will the scanner set to Smart 2 receive them?

No, the county radio system is Motorola Type 2 and not a P25 system even though there are channels with P25 audio. A pure P25 trunked system (like the PRWN) is completely different than a Motorola Type 2 system.

You can have a single frequency with P25 digital audio so P25 and trunking do not necessarily have to go together. A lot of federal frequencies are just a single channel but with P25 audio.

From: John Timmons
Topic: 16189 Message: 16189

Can anyone explain why I am not receiving Gila River Indian Community Fire/EMS communications on my Uniden BC 780 HLT scanner? Is their system not a Motorola Type II trunked system? All I receive is "data-transmission" type noise.

Thank you to anyone with a helpful reply.

John

16204. Re: [ArizonaScanner.com] Difference between ALS & BLS as mentioned on fire frequencies?

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2009-06-15 19:26:28 UTC
From: Bill McLean
Topic: 16195 Message: 16204

And when a ALS engine or ladder company sends a paramedic to the
hospital with the ambulance they will go back in service as BLS due to
being down 1 paramedic instead of the usual 2 paramedics on board.
This way they can still respond to calls in their area and the CAD
system adds an ALS company to assist for EMS calls. Phoenix Fire
protocols require 2 paramedics for a company to be considered ALS
responders.

ALS is Advanced Life Support, BLS is Basic Life Support. In the case of ALS, that means the rig has 2 Paramedic/Firefighters and 2 EMT/Firefighters. A BLS unit only has EMT/Firefighters on it.

There is a specific protocal of what calls are ALS and what are BLS and are too long to mention but things like Heart Attacks, Auto Accidents involving pedestrians, bicycles etc are ALS calls.

Wow, noone seems to change radio systems as quick as them. At one time it was very low power simple/conventional UHF.. Then it was standard LTR.. Haven't tried to listen for a year until tonight.. No close call hits in pklot so I went in. They have almost what looks like cordless phones in holsters, inch (or less) long antenna, no wired earpieces.. Some personnel had bluetooth like earpieces in their ears, definitely thinking it was a bluetooth enabled 2-way.

Any idea what radios these might be? No new FCC licenses for them based on a point radius search of their coordinates. I'm scared its like nextel or something. I'm hoping they'll build a nice simple motorola TRS with their new 20-story hotel that'll be monitorable for miles. :)

so could be. Not sure what the keypad looked like but the antenna was nearly EXACTLY like this and the width of the device...

drats, first taste of the hobby fading away at a slow slow rate.. :/ I assume with their 15-story bldg and waaay larger property than a current "tent" these wifi units will not be used? if thats what they are.

They 'piggy-back' on the wireless internet supplied for the
guests/employee's use.
Which means they'll have access points all over.

In Vegas, the casino change carts have wireless connections.

16214. Southwest Ambulance - mainly used for shuttling patients?

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2009-06-22 21:13:15 UTC
From: B. Howard
Topic: 16214 Message: 16214

I keyed some Southwest Ambulance frequencies into my little Bearcat using the Scannerstuff Phoenix/Tucson Metro Guide. Mostly what I hear is the ambulances being used to transport existing patients from/to assisted living facilities, hospitals, doctors offices, etc. Is this what Southwest Ambulance does? I think I have heard them actually responding to accidents but it seems to be rare. I hear the Phoenix Dispatch for emergencies and was hoping to hear followup on another source. Anybody know of a better one than SouthwestAmbulance? Unfortunately at this point I can't get digital and/or trunking. Thanks.

Not sure what other options are available in the VOIP world, but our cordless VOIP handsets (from Cisco) do not have bluetooth, and the reception is awful. YMMV

Believe me, that is what they mostly do. Worked there for some years. They have dedicated units that were at that time normally on different frequencies that do the 911 areas.

You don't mention specific frequencies you're listening to, but if you try channels 11 (Mesa-Gilbert-AJ), 12 (West Valley), and 19 (Tempe-Chandler) you should hear responses. Although it's been awhile since I've monitored channel 12 (or 16 for move-ups and postings) myself.

Also try the Professional Medical Transport (PMT) frequencies.

so go by Radio Shack and get a right angle bnc connector (278-116) and put it on yr scanner. Most good scanner antennas come with a straight bnc attached. connet the two and you have what you are looking for.

I am a Home health Nurse in Tucson. Anytime I hvae to call for a 911 response, the TFD is the primary response and unless it is an "emergency" they have SW Ambulance make the transport to the hospital. The few auto accidents that I have assisted at by being first on scene, the TFD was usually the transporter, but the would call for SW to do the simple transports.

Can you give me the frequencies SW uses in the Tucson area? I would appreciate it. Do you have the TFD ones? I have the dispatch, but, they put the responding units onto Freq 1 to freq 4.
Many thanks.

Hi everyone thank you for all of you who listen to my scanner feed. We have had a very busy month so far with shootings, stabbings etc. I just want to drop a note from July 7 to July 19 I will be away on vacation. My feed will be down during this time. I will be 2500 miles away .My scanner will resume on July 19th. I have now added sky warn weather spotter frequencies due to possible thunderstorms over the weekend. At times you will hear ham radio over the sky warn net. Thanks Tom

Hi, Thomas. 'Sorry about the weird characters. I think I tried the Beta Rich Text Editor. I won't use it again.

I am a newbie and don't know what TFD is. Tucson Fire Department? I don't listen to Tucson at all. I only have a cheap scanner that cannot get digital and/or trunking.

I just get my frequencies out of the Scannerstuff Phoenix/Tucson Metro Guide - 10th Edition. I don't have any secret frequencies or anything that is not already in the book. When I look under "Southwest Ambulance" on Page 93, it doesn't even mention Tucson. 'Sorry I can't be more help.

From: Paul Sieger
Topic: 16227 Message: 16227

I purchased the Pro-106 back in November. The frequencies for the RWC were already installed and all I had to do was program in the talk groups. That was easy.

My house was burglarized back in Feb. and my scanner stolen. I replaced my Pro-106. The problem is that not even the PRWC is programmed into this one. I have a programming cable for my computer. Does anyone know how I can get the RWC's downloaded from? Thanks all.

Paul, sorry to hear abut your loss. Its never easy when someone decides that they want your things more than you do.

I also have a Pro106 with the RWC frequencies and talkgroups programmed. I have mine setup a bit different than most other users, I use all of the control channels used by the different simulcast systems on the network instead of using the couple of control channels for each site independantly. This way if a user from Simulcast A (Phx PD) happens to be on Simulcast E for whatever reason I will hear them without having to change anything in the scanner. It all works pretty well and I have on occasion I have picked up a few things that I probably wouldn't have if I had it programmed the other way. I'd be happy to send you my file if you want it.

My house was burglarized back in Feb. and my scanner stolen. I replaced my Pro-106. The problem is that not even the PRWC is programmed into this one. I have a programming cable for my computer. Does anyone know how I can get the RWC's downloaded from? Thanks all.

Topic: 16227 Message: 16229

I know this is way after the fact, but it may help someone else. I use Scancat to pgm my scanners and do not know if it is possible to do this with any other pgms, but I will pass the info on anyway. when I pgm a scanner for a friend I replace the screen that first shows up with one that reads "Property of Jon Doe" I sometimes put the cell nu,ber in ther also. Another thing that can be done is to put a small address label under the battery holder. Paul - hope you might have had the s/n of the unit, you possibly could get the number of the RS service Center for your area and let them know that it is a stolen unit.

Paul, sorry to hear abut your loss. Its never easy when someone decides that they want your things more than you do.

I also have a Pro106 with the RWC frequencies and talkgroups programmed. I have mine setup a bit different than most other users, I use all of the control channels used by the different simulcast systems on the network instead of using the couple of control channels for each site independantly. This way if a user from Simulcast A (Phx PD) happens to be on Simulcast E for whatever reason I will hear them without having to change anything in the scanner. It all works pretty well and I have on occasion I have picked up a few things that I probably wouldn't have if I had it programmed the other way. I'd be happy to send you my file if you want it.

Ed, excellent ideas. I know that after a bunch of my tools were stolen out of my work truck the officer that took the report had suggested engraving my initials or company name into the tools as well as recording the serial #'s. Often when they bust a drug house they find a lot of stolen items but none of it is usually traceable back to the owner due to no identifying marks and the owner doesn't have the serial # info.

Thanks to all who replied and sent e-mails. I went with the premium subscription on radio reference and used Win500 to program my scanner. It also helped tutor me to program it manually if necessary.

16235. Pro-96 and Phoenix regional network?

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2009-07-02 04:46:04 UTC
From: Jerry Riechert
Topic: 16235 Message: 16235

Getting my Pro-96 out again. Is it still usable with the regional network? I remember when re-banding was coming that it was thought that the Pro-96 could be manually programmed to work the system. Is that still true or am I out of luck? I searched the group but didn't have much luck finding an answer.

Older microwave equipment failed.
Took techs until almost fireworks time to get things straightened out.

Regional wireless cooperative. It is the 800/700mhz P25 digital trunk system in use valley wide that many different agencies operate on. Check out Radioreference.com for site locations, frequencies and talkgroups. You need a scanner capable of following and decoding a P25 trunking system.

16258. More changes in Pinal County PCSO

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2009-07-08 23:46:16 UTC
From: liferocksj
Topic: 16258 Message: 16258

I listen to Pinal County (PCSO)almost daily. This week I noticed that they no longer use designations of "King, Frank, George..." to identify the area the officers are working. Instead officers seem to identify themsleves by saying something like- "2 Charlie 35"...

Also, the dispatchers used to say "I need a King unit for a 415 Frank" when they needed an officer to respond to this type of traffic. Now they seem to call officers directly on the radio instead of letting officers take the traffic if they were available.

Does anyone have information about these new radio procedures and what the new designations mean?

On a daily/weekly basis, how much traffic is handled on these channels? Would it be worth programming them, or is it occasional usage?

What's it going to cost you to program them?
You can always mark them to skip if it's annoying.

And, I'm not sure that Scottsdale Thompson Peak is terribly outlying,
and they go through DPS on Med 2.

I don't use a scanner. The only scanner I have is an old PRO-2020. I program them into my handheld radio, but don't normally listen unless they're somewhat active. Otherwise they just become another entry in the memory.

Think you mis-heard it.

Sounds like the 'PSAP' channel

It's a talkgroup on the RWC which go to a large number of agencies NOT
on the RWC via control stations..
It gives them an APB and cross-patching resource.
All the agencies agree to listen to that talkgroup, and it's tested 3
times a day.

I, myself, don't have the talkgroup ID.

You're kidding, right????
Those are the 'You've got questions, We've got stupid looks' people.
If it ain't a cellphone, forget it.
I once ordered one of their online daily specials and had it delivered
to my local store.
Never got a call that it came in.
Checked online and found when it HAD been delivered.
Went there to pick it up.
Shift manager said that nobody that was working there that day, had
been working there when the item had been delivered.
Including himself.
In the matter of less than 2 weeks, the entire staff had changed!

Much better ideas.
Look through the files on the website for this group.
Or visit <http://www.radioreference.com/>.
Or buy the SouthWest Frequency Directory [SWFD] that's advertised on
the homepage for this group.

No. It can't decode the P25 audio that MCSO uses nor can it follow the
P25 trunking that the Phoenix Police use.

16278. Williams Hamfest Photos

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2009-07-22 03:42:51 UTC
From: N7JND
Topic: 16278 Message: 16278

Hi All,

Angie and I went to the Williams Hamfest this last weekend. We only went on Saturday and not Friday. We were there on Friday, but did not attend the Hamfest until Saturday. The indoor vendors were great and well displayed. The outdoor tailgaters were pretty slim pickings. The biggest issue with this Hamfest, is that people were set up in each corner and there was no groupness involved. The photos will show this. I noticed older people had to really walk between some of the tailgaters and the 92 degree temp with 90% humidity was making it difficult for some. My suggestion? Assigned Parking. The Icom display was excellent as with the other indoor vendors. But, it was very hot in the hall and there was absolutely no fans running.

Overall, some said it was a decent Hamfest but it was not worth the drive all the way from Tucson for what there was. Will I return next year? Probably Not.

But, I do have my photos posted at www.n7jnd.com and will leave them up there for about a month for you to look at.

73,

Chris - N7JND

FYI
There's a Pro 96 on Craigslist here in Phx for $100. Might be great for someone getting their feet wet.

Rebanding has NOT come to Phoenix.
Or anywhere else along the border with Mexico.

The FCC is still trying to get the necessary diplomatic agreements with Mexico.

Topic: 16267 Message: 16284

Sorry for the delay .. finally got 'round to looking at this.

This looks like the same system that is shown at RadioReference.com .
http://www.radioreference.com/apps/db/?sid=796

I don't see any new frequencies . just maybe a backup site (I don't think they can simulcast a P16 system, and it doesn't look like they've "zoned" it but I could be wrong).

The low range of frequencies are repeater input frequencies.

16285. programming trunk tracker????

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2009-07-24 00:04:22 UTC
From: cb9475
Topic: 16285 Message: 16285

Hi, I have two scanners, one is a Bearcat BC296D digital scanner with trunk tracker the other is Radio Shack PRO-96 digital trunktracker. OK, Now my problem is I'm not an expert on trunktracker programming, I have read it, re-read it and still don't understand it and it seams that nobody else dose eather??? I have went to all the Radio Shack stores in Tucson and Phoenix and get the same answer"I don't know"
Is there anybody in Tucson or Phoenix that can help me program this in the trunktracker mode? The only trunktrack mode is for the Pima County Sheriff Department and everything else is still anolog.
If your an expert on trunktracking and would like to help me please let me know and we can set up a date to get together.
thanks Clifford

Hi, Clifford. I don't even own a digital and/or trunk tracking scanner, but I have visited the Ham Radio Outlet and have been very impressed by the advice I've gotten from Steve there. (602) 424-3515. If it were me, I would offer to pay them to program a radio I'd bought somewhere else, but hopefully they can either help you or point you to someone who can. Also, Steve spoke about possibly getting someone to conduct classes on this subject in the future, so they may already be doing this. 'Worth a try. Good luck.

That system is actually pretty busy during the day, and during any
sort of incident where ADOT ALERT is activated.

Are you sure you got the control channels right?
And you did define it as a Motorola Type II system?

Clifford,

I have a BC296D and have set it up with both a trunk system and analog frequencies. Although it is advertised as being able to listen to both at the same time it did not work out because the trunk system needed the squelch wide open to function properly thus disrupting the analog frequencies. So realistically you can listen to either trunk or conventional but not both.

I use ScanControl software to program the radio although I could probably do it manually now after years of practice. The owners manual reads like it was translated...probably from Japanese.

Now the bad news. The Scannerstuff Southwest Frequency Directory says the Pima County Goverment uses an EF Johnson MultiNet II. "Trunktracker setting: No Scanners; Must use "LTrunk" PC software."

So it appears your going to need more than just the scanner if you want to listen to the Pima County Sheriff.

I Can,t speak for the BC296D;Not familiar with its charactaristics;Butt it seems kind of odd to have your squelch wide open to trunk a system;Every scanner i,ve ever owned;if you do that the scanner stops;It won,t scan or trunk;Stays open on whatever channel you,ve got it stopped at.I,ve attempted to monitor Pima county on and off for years and the only portion I ever got partially was the remote repeater for the ajo area.I Don,t live in tucson though.Butt its been my experience Pima county has been a tough one to master anyway.

i have been told that there is some if not most of the cars are now getting a new low profile ant combo that has gps capability's. if you get to see the car up close there vhf ant now has a much bigger base to it. that is the gps ant.

16298. Office Scanner Advice

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2009-07-29 14:10:50 UTC
From: Rio Grande Air
Topic: 16298 Message: 16298

The hospital for which I work is adding a scanner in our emergency room. We have some unusual needs because of an unusual location and I could use some advice re: the right scanner (probably tabletop, not handheld) and the right rooftop antenna. We're in far west Mohave County, right where Arizona, California and Nevada come together. So we'll be monitoring law enforcement (from DPS to CHiPS), first responders (from Mohave County SO to Clark County NV fire) and aviation (local tower and several unicoms) on a variety of bands, both digital and analog. Ideas and suggestions for the best or most?
Thanks!

I would suggest either a Uniden BCD996T(base) or a GRE600(Base). These radios can do digital and analog scanning at the same time. The best type of antenna would be a discone antenna.I have these radios at home and that is the antenna that i use.

I also belong to a scanner club in the phx area, but we have people that listen to the scanners in Northern Az. Our website is www.icp-az.org

Any questions, call our VM at 602 222-6264 and i will try to help you further.

Good Luck
Lori

[moderator correction: ICP and APSN are notification services, not 'scanner clubs' as such]

Actually I would go for the new BCD-996XT. It is an updated version of
the 996T that is said to have much better sensitivity over the 996T.
Have not tried one yet, but I do like the two 996T's that I have and
would love to try out the new 996XT.

The 996XT also has the ability to assign channels or trunked talkgroups
to specific memory recall numbers. This can, if properly setup, make it
much easier to get to specific `channels' over the way the 996T works.

Since you got the scanner and antenna recommendations I would include in that shopping list the 10th edition of Southwest Frequency Directory. In it you will find all the info you will need for Mohave County, Arizona and Laughlin, Nevada. The outside antenna is a must in your area you mention and you will pull in all the action along the river and the basin. Caution - pulling signals from Kingman area will be rough but not impossible due to mountain terrain.

I park my RV on the hill opposite of the River Palms on the Laughlin side and I suck them signals in with a BC780XLT and a small outside vehicle scanner antenna. Tons of medical calls in the Bullhead City /Laughlin area.

Thanks, Bill, Lori and Roy.

I don't have to worry too much about picking up Kingman ... there are repeaters for DPS and MCSO on our side of the mountain. The outside antenna will be a must. Unlike the Bullhead hospital (which sits on a hill), our new hospital in Ft. Mojave sits on the east side of the Colorado River in the Valley.

Re: the tons of medical calls, yep --- you have Bullhead Fire, Ft. Mojave Mesa Fire, Mohave Valley Fire, Golden Shores Fire on the AZ side, Clark County Fire and AMR Ambulance on the Laughlin side, and Baker Ambulance and occasionally San Bernardino County Fire on the Needles side --- not too shabby for our little "micropolitan" area ... all within 15 miles of my office. (And that doesn't count Kingman, Lake Havasu, Dolan Springs and other departments in other parts of the County. Mohave County is, geographically, the fourth largest county in the Lower 48.)

And yep, I'll be getting the frequency directory to double-check and make sure that everything we have is up to date.

Thanks again for the advice!

Lance

16306. Using GPS to open systems?

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2009-07-31 20:59:10 UTC
From: faxon2002
Topic: 16306 Message: 16306

Hi to all. Is anyone out there using the gps to open systems in AZ? I am very interested in setting the scanner up to do this however I have no idea where to start. Most interested in the phoenix regional system.
Anybody?
Thanks

Been a while, but I have programed the BCD996T for GPS using ScanControl software (full function, paid version). It was a no-brainer, but it took a bit of time (you need to enter lat/long for center and enter the radius of coverage desired). You can enter several circles of interest for each freq/talk group, and they can overlap. I have circles all along routes connecting:

Phx/Gila Bend/Yuma/San Diego/LA/Riverside/Redlands/Barstow/Las Vegas/Kingman/Wickenburg/Phx.

Redlands/Indio/Blythe/Phx/Camp Verde/Flagstaff/Grand Canyon.

With another radio and/or no Scan Control, I would be lost as to your question.

However, i don't use it for Phx/Reg/Sys. That would only make sense to me if I was driving all over Maricopa County, 5 or more days of the week, then maybe so.

Since you mentioned Nevada, there are a few things to note.

1. Southern Nevada is moving what looks like everything but LVPD to a new inclusive system (http://www.radioreference.com/apps/db/?sid=669) is the link over at RadioReference for that information.

2. LVPD provides law enforcement for the county's rural areas out-side of the various citys' boundries as well as enforcement of Las Vegas proper. LVPD is moving to an Open Sky system that cannot be monitored on any scanner. I think it's in the testing phase and no one has moved as of yet.

And For California.....

You will want to monitor San Bernadino's sytem #15 for Needles and thier Coventional Desert system (http://www.radioreference.com/apps/db/?ctid=218). This information is also in the Southern California Frequency Directory which is put out by the same great folks who sponser this list and put out the Arizona Guide. I recommend both of these. A lot of the info I've mentioned on RadioReference is from these publications so one can't go qrong with them.

Have fun

Mark

I set up the BCD996T using the Uniden software that came with it. I set up my systems based geographic area such as east valley, central, west, north, Payson, Prescott, Pinal, etc. I set up the groups based on police, fire, EMS, DPS, air ops. The GPS function did work but I found that just when I was listening to something interesting it would switch off. You either turn the car around or start messing with the 996T which is something you don't want to do while driving. I could have set up more area overlap but I found the way to have more control is to set up and use the Quick Keys. Believe me it took some determination to learn it, especially turning groups on and off. But once you figure it out, it's just like banks on the older scanners just a whole lot more of them. I keep a cheat sheet cause I can never remember the assigments. This way I decide when to switch geographic areas and I can listen until that interesting call fades out if I want.

Thanks, Mark. I appreciate the information. I know which agencies and frequencies we need to monitor at work ... I already do so from my handheld. I was looking for the best brand of analog/digital base scanner and rooftop antenna. I don't need to monitor hundreds of frequencies, just several dozen.

Much Luck to you.

I did this for a month, and it drove me absoulty nuts! I'm a trucker and I had litterally hunderds of towers, talkgroups and conventional freqs-making me go through each site and attempting to figure out it's center and radious and if and where it overlapped with the next one then, praying that I had the proper users for a particuar site. Like in Colorado, this was a job. It worked-kind of. I had to go back and change a lot of range settings etc and finally came to the conclusion that loading the q-keys by county made much more sense to my operation then using the gps-I manually turn the q-keys off and on as I roll through county to county.

Part of the problem, the major part is-I just don't have the time for the research involved. However, I think it's a wonderful addition to the the 996 for those who can use it.

Your PHX approach/departure frequencies will vary by elevation:
http://maps.avnwx.com/airport/KPHX . Also note that Runway 8/26 and the Runways 7/25 complex use different frequencies. Approach should tell the flight which runway to line up with before handing off to the tower, but last minute changes are sometimes possible.

This is what I get for writing a email while half-asleep. Sorry for the double-speak.

I am meeting a flight from Mexico at Sky Harbor on Saturday. Can someone tell me which approach/arrival freqs I should be listening on, out of the several there are?

Thank you,

David, N7FAN

You might try entering in the various ARTCC frequencies for the area and see if you can catch the flight while it's fairly far out. Then you can catch the first hand off frequency and then follow it on in.

From: Joe Badura
Topic: 16314 Message: 16318

You may try these freqs for ARTCC as the aircraft is approaching Phoenix. I am not up to speed with what ARTCC freq are used for aircraft approaching Phoenix from the South.
126.450
125.400
132.350
125.250
134.450
133.000
124.900 ☐ Phoenix Southeast

When the aircraft is handed off to Phoenix approach, these are the freqs that will be used:
128.650 ☐ North Approach
126.600 ☐ North Final (Runway 8/26)
118.700 ☐ North Tower (Runway 8/26)
119.750 ☐ North Ground
124.100 ☐ South Approach
120.400 ☐ South Final (Runways 7/25 R&L)
120.900 ☐ South Tower (Runways 7/25 R&L)
132.550 ☐ South Ground
With these frequencies you should be able to hear the Aircraft from about 15 minutes out all the way until it parks at the gate.

Regards,

Joe

Yes. You'll hear ATC hand off from one frequency to the next, usually with a readback.

16321. 396T & 896T Combo FOR SALE

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2009-08-09 08:40:56 UTC
From: Chris
Topic: 16321 Message: 16321

THIS IS A COMBO SALE ONLY - NOT FOR INDIVIDUAL ITEMS!
****

$800 FOR *BOTH* - BOTH ARE AT LEAST $450 EACH

For Sale I have both a 396T & 996T Scanner, **IN COMBO ONLY**, for sale. Both are pre-programmed for the the West PHX area, including Glendale, Peoria, and PHX, and are in Like-new condition. If you purchase the ARC software, you can reprogram it. NOTE: THESE SCANNERS HAVE BEEN BASICALLY UNUSED. WHILE THEY MUST BE CLASSIFIED AS "USED", THEY ARE LIKE-NEW, AND HAVE AFAIK THE LATEST FIRMWARE INSTALLED.

I am offering these as A BUNDLE - SCANNERS ONLY - NO MANUALS, OR ACCESSORIES. THE 396 will come with a RS 800Mhz Antenna, the 996 with NO ANTENNA, AND BOTH WITH NO MANUALS OR ACCESSORIES - AT YOUR REQUEST, I WILL BE HAPPY TO PRINT OUT THE MANUALS FOR BOTH SCANNERS - THEY ARE AVAILABLE ONLINE, SO YOU *COULD* SAVE THEM TO YOUR COMPUTER FOR REFERENCE OR LATER PRINTING WITHOUT ME DOING THE PRINTING.

THESE WILL DO APCO-25 (THEY SCAN ALL CURRENT VALLEY SYSTEMS THAT DO NOT USE ENCRYPTION (NO SCANNER CAN SCAN ENCRYPTED SYSTEMS) - VHF, UHF, 800, 900 AND THE 1200(?) BAND, EXCLUDING CELLULAR.

IF YOU HAVE QUESTIONS, PLEASE FEEL FREE TO ASK, BUT DO *NOT* ASK IF I WILL SELL THEM SEPERATLY, THESE ARE A COMBO DEAL, *PERIOD*.

Please contact me at chrisf8657@... if your are interested, or have questions.

This can be arranged for Local pickup by meet or by shipping (additional cost).

Thanks,
Chris

16322. SAGOR Repeater Question

This was 'old' when I got here in '93.

It was setup when mobile telephones were few and far between, and
airtime was expensive.

The only current user is State Surplus Property, and they have their
own repeater on a unique PL in the Capital Complex, using the White
Tanks repeater only when their vehicles go outside the downtown area.

The scanners that are out there are either a Uniden 396,996 or a Grecom 500,600. These will pickup all the surronding agencies in the valley.

Good Luck

Ayup. The Pro-197 is a digital trunking scanner that
can decode all three of the popular system types. It
also covers 700 Mhz.

It is a very nice, sensitive scanner. I love mine. I have
it hooked up to a small diskone antenna(also from RS) on
a 5' mast on my roof.
.
Even though I am way up in Carefree I can hear most of
the valley systems.

If you buy this one you will find there are Maricopa Frequency
and Control channel programming software available that
makes setting it up a breeze.

The Pro-96 and Pro-2096 can't handle (trunk) some of the most recent additions to RWC that use the 700 MHz band such as Simulcast F - Tempe, Simulcast G - Peoria, and White Tanks.

ASU also has 700 MHz frequencies in use for parts of their trunking system.

The other suggestions that have already been made all work with the newest systems.

From: sh9730
Topic: 16336 Message: 16336

Been awhile since I ve posted here, but love to read all. Im hoping someone here is "in the know" as to when/if PCSO will start splitting the dispatch channels at all again. They used to split it into East and West often, especially in the afternoons.

I can only guess they stopped due to staffing shortages, but was curious if anyone knew for sure why, and if it would start up again at some point?

I ask because Im down here in Casa Grande, and would like to listen to the Charlie units in this area, but the way it is now there is SOOOO much traffic for the areas up in Queen Creek, Johnson Ranch etc that I am not interested in as a rule.

Thanks in advance if anyone knows anything.

Topic: 16336 Message: 16337

Hi there! I've been trying to get a handle on what is going on with PCSO too as I listen nightly. My guess is that they will not go back to splitting up the dispatch. They seem to have completely re-worked their dispatch procedures. From what I can tell, they have a "traffic" channel and a channel to inquire about car license and background checks.
I have not gotten a handle on what units are where but I don't think "charlie" is necessarily Casa Grande as I have heard "Charlie" units responding to johnson ranch/san tan traffic. Please take everything I have said with a grain of salt as I am still working on understanding the new procedures.

Why in heaven's name would you do this by hand?
There are P96 files on the groups webpage, and the Win96 software is
not expensive when you figure what your time is worth.

Hi Walter
I found an Arizona.zip file, but it's from 2004.
I d/l'ed it and will try it.
Off to RS to buy an interface cable.

Would there be a more up to date file somewhere?

Jon

Is it possible to pgm the 396 or 346 (conventional) without the computer and still maintain ones sanity? I have a 346 that belongs to a customer without the cable and starting to want to bounce it. Durn good scanner tho.

Yes, it will decode the non-encrypted channels of those. The Sheriff
and Glendale are generally in the clear. I think some of the Phoenix
channels are encrypted. I live in Gilbert so Phoenix and Glendale are
a little out of range for me.

I suppose it is but why would you want to? Uniden gives away the
programming software for the 396 (I'm not sure how the 346 is
programmed so I can't answer for that one). Other people make
programming software for the 396 that is either free or pretty cheap.
A lot of the software does more than just program the scanner as well.
I use ProScan (http://www.proscan.org) and along with programming it
will record and log what it hears.

16355. Re: [ArizonaScanner.com] Digest Number 3023

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2009-09-09 13:13:22 UTC
From: David Greenberg
Topic: 16354 Message: 16355

Sorry accidentally hit send.

FYI,

Only 4 of the new engines are in service right now and the ladders have not
been accepted yet by PFD. They are in town, but no delivery yet.

16356. New Amateur Radio Site for Phoenix

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2009-09-09 17:33:52 UTC
From: m_lombana
Topic: 16356 Message: 16356

I wanted to post a new link for a new site for all local amateur radio operators (hams), I created the site out of what I feel is a need for the local ham community to have 1 central site to get information on.

I realized the need after trying to find info on a fest or flea and found that there are a few club sites but no one central clearing house for the hobby here in the valley. Thankfully Dan has allowed me to plug the site here (thanks Dan).

That said: www.PhoenixHamRadio.com or www.HamRadioPhoenix.com is now online.

73's
Miguel

16357. Seeking solutions (again) for listening via Internet radio

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2009-09-09 21:25:10 UTC
From: howardbc9783
Topic: 16357 Message: 16357

I still have about 10 Maricopa traffic streams entered on my WiFi-Internet radio (via Reciva), but I keep having problems with the 2 that have DPS traffic. I bring up the radioreference.com website, then I click on Mobile up at the top of the screen, then RR LiveAudio, then United States, Arizona, Maricopa, and then I've tried both clicking on the stream I want and then right-clicking to get the URL under "Properties," or right-clicking immediately on the stream and copying/pasting what is under Properties. I keep getting "Retrying" on my radio, which means the URL is no good. What am I doing wrong? As always, any help is much appreciated. Thanks very much.

16358. Re: [ArizonaScanner.com] Seeking solutions (again) for listening via Internet radio

Yahoo group: ArizonaScanner (2007 — 2012)

From: Roy Schahrer
Topic: 16357 Message: 16358

Does this happen while you are navigating on the Receiva? If so, does the Receiva actually tell if the desired station is actually online at the time you are trying to listen? Try going to RadioReference with a regular web browser when this happens and see if it shows that stations status as online or offline. Naturally, if the station is offline then you will not be able to receive it. Not all feeds are 24/7. I try and keep the feeds I maintain up 24/7, but sometimes the feed computers have other ideas. :)

From: Bobbie Howard
Topic: 16357 Message: 16359

Thanks, Roy. I use Mozilla for my browser. I asked Reciva if I should use IE but have received no response yet.

Yes, I check the radio reference website often and can see when the 2 streams in question are "offline," but they were online yesterday when I tried to copy/paste the URLs into Reciva. This is at least the 3rd time when they were online and I copied/pasted the URLs into Reciva. I know something's isn't right when the URLs keep changing. They didn't change before everything was switched to radio reference.

Bobbie

16360. Is there a single list of all public safety codes in the Maricopa County area?

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2009-09-15 23:13:48 UTC
From: howardbc9783
Topic: 16360 Message: 16360

Maybe it's wishful thinking, but I wonder if anyone has created a single document containing a single list for ALL the local Phoenix area police and fire radio codes in numerical order? That would be awesome. I have many pages of paper with codes from the various agencies, but it never fails that I can't find the one that they just mentioned on the radio. In other words, starting with the lowest code (in numbers) for Maricopa Sheriff, Phoenix Police and Fire, DPS, Scottsdale Police and Fire, and so on for all the local agencies in the Maricopa County/Metro Phoenix area. Something not bigger than 2 pages would be wonderful. The listing should say what agency is associated with the radio code. Example: 10-76 "Notify veh. owner of recov" (MCSO). If such a list doesn't exist, I may try to create one myself. What does everyone think? Thanks.

16361. Re: [ArizonaScanner.com] Is there a single list of all public safety codes in the Maricopa County area?

What kind of a format are you thinking of?
Seems you'd have the same problem of finding the code, then having to
find the agency, then seeing what it meant.
Right now, you start with the agency, then the code, then the meaning.

From: johnphx711
Topic: 16360 Message: 16362

I mainly listen to DPS, and have their most common codes committed to memory so I have no list. If I had free time between now and Christmas, I would search the SW Directory and compile a spreadsheet with the codes (rows) vs meanings (columns). If nothing is posted before New Years, I may do it myself just for fun.

I do know that Chandler PD meshes very closely with DPS.

I have caught myself talking to non-scanner friends about a 961 that I passed on the way to work.

From: Bobbie Howard
Topic: 16360 Message: 16363

Thanks, Walter.

Yes, it would be labor intensive, but I would copy and paste as much as I could. I am not sure if I'd do it in Word 2003 or Excel 3003. Maybe both, since I know many people may not have Excel. I'd start with one long list and then divide the list into rows (or columns). I think between the Internet and my 10th edition of the ScannerStuff Phoenix/Tucson Metro Guide, I should be able to find the radio codes for the Phoenix area. I wouldn't do Tucson or Flagstaff.

Right now, I am listening to several different agencies on an Internet radio, so it doesn't give me much detail. Also, I've noticed that sometimes there is more than one agency at a scene.

Don't expect the list to be done by next week, but maybe something I can work on in the future if no one else has already done it.

Bobbie

> Maybe it's wishful thinking, but I wonder if anyone has created a single document containing a single list for ALL the local Phoenix area police and fire radio codes in numerical order? That would be awesome. I have many pages of paper with codes from the various agencies, but it never fails that I can't find the one that they just mentioned on the radio. In other words, starting with the lowest code (in numbers) for Maricopa Sheriff, Phoenix Police and Fire, DPS, Scottsdale Police and Fire, and so on for all the local agencies in the Maricopa County/Metro Phoenix area. Something not bigger than 2 pages would be wonderful. The listing should say what agency

is associated with the radio code. Example: 10-76 "Notify veh. owner of recov" (MCSO). If such a list doesn't exist, I may try to create one myself. What does everyone think? Thanks.

Topic: 16360 Message: 16364

Hah !

You'll find

. Same meaning (10-4, 10-20)

. Important (dangerously) different meaning (MCSO 905 is Phoenix 906, MCSO 906 is Phoenix 907, MCSO 907 has no equivalent at Phoenix)

. Totally different meaning: Prisoner in custody is MCSO 10-42 but DPS 10-15; DPS 10-42 means something to do with home location, which for MCSO is 10-48.

. DPS 964 means accident unknown injuries, for MCSO it's 962U, but 964 for phoenix is 964T - a translator, and 964 for Surprise PD means "the reporting party".

. Almost everybody agrees on 211, 961, 962, 999 and 998 or even if they don't use the code (like 998) they understand the meaning. But the suffixes will get you:

o 96*A for Phoenix means officer-involved accident, but for MCSO means alcohol-involved.

o 96*H for most is Hit and Run but not all.

o MCSO has different single letters for alcohol-related plus hit and run, or a private-property plus hit-and-and-run.

I could go on and on.

It's why all the agencies have a rule: when talking to another agency on the radio or via phone, NEVER use codes. And if somebody slips and uses one, the experienced operators at other agencies will ask "what does that code mean to you?".

But hey, more power to you . let us see what you come up with. RadioReference.com and SWFD would be good sources of information. And, oh yeah: Lots of luck with the two pages--- I'm down to 7-point font for the official MCSO type code list and still at 3 pages.

I'm used to dispatchers answering the phones.

I called in an accident on a Phoenix street and described it as a 961
[non-injury accident]
The 911 call taker was completely clueless.
I had to drop back to plain language.

I doubt the calltaker is clueless but was trying to get you to talk plain English so that there is no mistakes on what you meant. Although the calltakers don't deal with codes as frequently as those working the radios, they do have to make sure they have accurate information, and the average citizen does not know police codes. Even cops get the codes wrong from time-to-time. There have been numerous times a cop comes upon an accident, reports that it's a 961 and to roll fire. When questioned, he'll say something along the lines of having 3 patients, and then the dispatcher will call fire and say it's a 961. If I answer your call, I'll expect you to talk in plain English.

It might have something to do with the recent changes the owner at Radio Reference has implimented to all feeds on their site. The url to your feed changes constantly now to avoid anyone rebroadcasting the feed somewhere other than Radio Reference. Their new stance is that that; it is a violation of rules if your feed (that is hosted by RR) is mirrored, linked, fed, or streamed on ANY other site than Radio Reference. In a recent post, the owner stated they will soon charge feed providers for a feature that could allow them to do this on a limited basis.

Dont shoot me, I'm just the messenger.

I would offer this, if you are calling in to an emergency dispatch center, you should always use plain english...a major part of the National Incident Management System (NIMS) is training for public safety / national agencys to use PLIAN ENGLISH in all of their communications. If there is a need to keep information confidential / secret, then they are told to switch to an encrypted mode of communications and us PLAIN ENGLISH in transfering the information...so it MAY make sense to use plain english if you are calling in an acident with out injuries...cause some one may misunderstand your 10-76 as a terrorist with a nuke......you never know.

Thank you, ICP556. I appreciate your being honest. Still, it is extremely disappointing (and makes no sense to me) that the owner of RR disrespects all the people who have invested their time, money, and efforts intp Internet radios. There are millions of people around the world who use their Internet (WiFi) radios to listens to stations and streams from all over the world. In my case I am a retired person who likes to listen to an Internet radio in my bedroom and I certainly do not re-broadcast it. (I wouldn't even know how to do that.) The owner of RR sounds like another corporate person who wants to milk his listeners for all he can.

Until I can afford a good scanner, I will try to find another website that is more user-friendly. Anyone have any suggestions? Thanks.

It would seem that the entire concept of rebroadcasting
scanner traffic to the internet could be a violation
of FCC laws. That's been a longstanding discussion.
You and I are not allowed to "divulge contents" of
traffic we hear on public service frequencies. Rebroadcasting
that traffic to an internet feed would certainly come
under the "divulge contents" umbrella.

For RR (or anyone) to charge for that feed would, I suspect,
be asking for legal trouble at the federal level.

RR doesn't charge to listen to the feed, just requires a premium subscription to listen to the 24/7 scanner archives of the live feed. Listening to the feed itself is free though. Recording 1,300 feeds 24/7 requires loads and loads of hard drive space as you can imagine.

Another thing to consider is that the department your looking for may not be the one answering the phone. A lot of cell phone calls can be re-directed to different departments, and if you use a scanner code, it could have a different meaning for different departments. I think all departments should just go to plain english. It's easier for inter-operability and in some cases saves time for the dispatch/description instead of using a code.

Whether or not they charge for listening wouldn't make
a difference if it went to the point of the question
of the FCC regs. One way or another, they are "divulging
the contents" of scanner transmissions. That's a pretty
clear, even though perhaps little enforced, violation.

I'm not ragging on RR. Just pointing out that it's
a violation of the federal law. So they're operating
on shaky ground.

From: Mark west
Topic: 16357 Message: 16378

I've been reading these posts regarding on-line streaming now for a while and I have ask-what's the appeal. Maybe I can see on-line streaming catching the action when the listener is somewhere else-like out of state or the like but the idea of listening to streaming scanner feeds locally seems to me suspiciously like cheating. In the not so old days, if we didn't have the los, the antenna or whatever the reason, then we missed the calls and went on along monitoring what we could capture. And we liked it. Or at least we dealt with it. Maybe that was the heyday-and maybe the magic's gone as all this technologly now does it for us with very little work on our part. I am not comming down on those who do. There is room here for everyone. But, I just don't see the appeal and will probably never will. I like doing it the old fashonied way I guess. If that makes me a purist in a sense-then I guess I am.

My opinion anyway

I have never heard any discussions about a bait car on the unencrypted channels. Phoenix, has a talkgroup 2949 ?Vehicle Crimes Unit? that is encrypted. I?m guessing if there are any radio transmissions regarding the bait car, they would be on this talkgroup or another encrypted talkgroup. I'm not sure about other agencies.

Regards,

Joe

Not sure why the "coy-ness" in the question, a simple Google search will show all the departments in the area that have bait cars, radio chatter while they are working them, none and none likely atleast on open un-encrypted channels.

16386. CBP Wide Area Net?

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2009-10-07 05:31:40 UTC
From: radioprescott
Topic: 16386 Message: 16386

Listening to traffic on 171.1875 NAC 710 P25 clear and ECN.

Very strong sig on my 396 (and the 895 that I use to decode NAC, for what its worth) makes me suspect a Mingus Mtn repeater. Also get possible hits on 170.3375 and 172.2375 at the same time in P25, but not able to decode.

Sounds like CBP: Bravo 206, Bravo 207 in the clear in the field, 850 Robert encrypted - using 10 codes similar to CBP ("10-50, 10-51, 10-52, on one" "10-3 that")

Field units on a traffic stop "on I-40 west of Broadway exit" Running status checks on hispanic surnames by control number and mother's last name.

Only I-40/Broadway anywhere near me is Needles. Maybe this is part of a wide area net?

I wanted to know simply because I was hoping I could listen in if anything was going on. Since it was earlier in the year the AZ Republic mentioned it in an article I simply forgot what city it was. Now I know because just this morning on FOX 10 they showed hidden camera footage from inside a bait car in Avondale. If there is a TV program about bait cars, do the police departments really want to keep it a secret? My opinion is that if the PD makes the public aware of a bait cars the bad guys might think twice before taking a car.

16389. Sheriff Joe's "new tool"

Yahoo group: ArizonaScanner (2007 — 2012)

From: roots_grow_ten
Topic: 16389 Message: 16389

Hi everyone

Sheriff Joe has announced he'll be doing another crime suppression sweep next weekend. I like listening in on these - there's always lots of action. But I read in a couple recent stories that he's going to be using a "new tool" to keep people from monitoring the activities. Any guesses as to what that might be? Do you think he'd be able to use an encrypted channel to keep people from listening on scanners? Or maybe a new talk group or something? Would there be any way to find out if that is the case?

Here's an example of a story where he mentioned the mystery tool:
http://www.kpho.com/news/20952631/detail.html

Thanks

Sean

That was the media hog, California Highway Patrol.
And I will venture to say that the actual cars shown were never used again.

There are many of us in the business who cringe every time one of law enforcement's tools are 'outed' like that.

Notice that the Avondale footage didn't show the actual car being used, only the footage of the 'perp' doing the deed.

From: roots_grow_ten
Topic: 16389 Message: 16393

I guess that wasn't the best article, but it was the only print story I could find that mentioned the "new tool." Here's a video from Fox where they specifically refer to a "mystery tool to keep activists from videotaping him and his deputies":
http://www.myfoxphoenix.com/dpp/news/crime/arpaio_activists_filming_091809

I'm just speculating that the tool is some way to keep the activists from finding out about stops, since there really isn't a constitutional way to keep someone from videotaping. I'm just wondering if it's possible to block out the radio traffic so people don't hear the stops happening during the operation.

Any thoughts?

16395. RE: [ArizonaScanner.com] Bait Car

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2009-10-11 05:40:37 UTC
From: Danz, Dan
Topic: 16379 Message: 16395

Well there's a difference between making the public (and the criminals) aware of the bait cars as a crime deterrent and giving away information that makes the program ineffective. It would fail as a deterrent if the possibility of stealing a bait car was not advertised and it would fail as an apprehension tool if criminals knew where the cars were positioned or what they looked like.

You're not going to hear the words "bait car" on the radio – that would be an incredible lapse of security that surely would result in disciplinary action for any officer or dispatcher involved, especially if it results in a description of the vehicle or the location where it has been positioned. After the trap has sprung it's a different matter though, as the actions of many officers, aircraft, and even other agencies must be coordinated to effect the apprehension.

I'm 100% sure that there's radio traffic after the bait is taken … if the agency involved works it on an unencrypted channel, you'll just have to listen closely for the clues.

A great many years ago, I monitored some of the very early guided missile launches by an unnamed country; the radio traffic was encrypted, they took great pains to change frequencies, callsigns, operators, modulation – you name it. But after every launch, we always went back and re-listened to the traffic, or watched for frequencies that only had activity before or during the launch. Next time, we got a little more warning, and more intelligence about their capabilities. There were some incredible lapses of security by operators who chit-chatted about friends or the weather or a hated commander while they were tuning their transmitters/receivers, before they started passing encrypted messages. Patience pays off.

So, let me give you another hint: Do you even know the callsigns and/or channels used by the Auto Theft detectives of your favorite agency?

Keep on listening.

Problem is solved. I started tracing the cable from the scanner back to the antenna and wiggled the cable at a connector in the back yard I got better reception. Apparantly the cable worked it way enough only to effect the 800 & 900mhz frequencies. Once I isolated and somewhat repaired the problem I get much higher readings on my signal strength meter on the scanner. I just need to go out and get a new connector to make it a permanant fix. Since I was still receiving DPS and other VHF stuff I was not paying much attention to the cable as being the problem.

I'm not an expert by any means but I've been around law enforcement for many years, and pretty much all agencies use them, and it may seem like they keep it a secret, but they really don't. The only thing they don't do is hang a sign on the car, of which that obviously defeats the purpose. Very often they catch serial car thieves among other things. I've seen footage on (COPS), Various news programs including Stupid criminals. I've never seen a specific program that shows just that. I would think that would be pretty boring after the first 2. but almost any public parking area and hot neighborhoods you will see clear posted signs (BAIT CARS IN USE). So I hope that awnsers your question.

I wanted to know simply because I was hoping I could listen in if anything was going on. Since it was earlier in the year the AZ Republic mentioned it in an article I simply forgot what city it was. Now I know because just this morning on FOX 10 they showed hidden camera footage from inside a bait car in Avondale. If there is a TV program about bait cars, do the police departments really want to keep it a secret? My opinion is that if the PD makes the public aware of a bait cars the bad guys might think twice before taking a car.

David, try WPJI298 listed as 151.400 & 159.330

Control Points
1 37615 E HWY 60, SUPERIOR, AZ
P: (602)689-2723

This is the address of the Abroretum, so I would think this has a good chance of being the one.

Eligibility
90.21A - STATE GOV. PARKS AND RECREATION AGENCY; STATUTORY AUTHORITY: 41-511 PRESERVATION, PROTECTION, AND DEVELOPMENT OF NATURAL RESOURCES, PARKS AND FACILITIES AND COORDINATION WITH LOCAL FIRE DISTRICTS FOR PRESERVATION OF PROPERTY.

From a search of the FCC Database.

151.400 is AZ State Fire Ch1 & 4 for wildland Fires
159.330 is AZ State Fire Tac channel for Wildland Fires

these arent in use at State Parks except for fire emergencies, Let me ask my friend who works at Lost Dutchman and see if he knows.

From: ka7pcj
Topic: 16398 Message: 16401

I beg to differ with you Mike, the State Land Dept has been using
the 3 TAC frequencies (159.240, 159.330, 159.450) at our State Parks for
as long as I can remember. Kartchner uses 2 of them, 159.330 (Park Ops)
and 159.450 (Cave use). So don't discount the State Land TAC's as only
for use for fire fighting.

Now, I have never heard anyone "check in" from any of our State
Parks on the repeated (151.400, 151.415) channels as of yet, but those
freq's are licensed to the State Land Dept, and those are the same folks
that run the State Parks.

73's Donnie

From somewhere out in the "pucker brush"
just north of Libby Army Airfield, Fort Huachuca AZ
Artificial intelligence is no match for natural stupidity!

Roy & Mike,

I don't think he was necessarily looking for fire freqs. He works for the SFD and has almost all the radio freqs for that area from Queen Valley to Oracle. Just business use type freqs I think is what he wants.

Dead Horse Ranch SP in Cottonwwod was using Tac 2 in January 2009 when I caught them with routine traffic regarding picking up more supplies for the restrooms.

I agree they don't use the 151.4 freq.

The Boyce Thompson Arboreatum website indicates a relationship with ASU. They might have some iterenct freqs in use from the ASU licenses.

I talked to my friend atLost Dutchman today he said they are absolutely FORBIDDEN to use 151.400 & 151.415 for park use, they are strictly fire freqs but the Tacs channels may be used for anything while there is no fire ops traffic on them.

I also have a pro 96 and a 2096;I live on the western edge of mesa/tempe and chandler and for some unknown reason within the last 6 months or so;i don,t get mesa or rwc. I get mcso just fine and i get everybody on my 2096, butt i do admit mesa has alot of intermitten digital mix;Mcso has a tendacy to alot i,ve noticed;thinking on taking in to the shop and have its perimeters checked.

Watch "Jacked" on the Speed channel. (New episodes Thursday evenings, reruns other nights.) Like "COPS" but follows the auto theft task force in the Newark, NJ/NYC region. Have seen several episodes where they parked a bait car and waited. Most of the time they respond to reports of stolen vehicles.

I believe I've heard reference to a bait car once or twice while monitoring Peoria or Glendale. IIRC, the dispatcher simply mentions something about a signal from the vehicle, like a door opened or the ignition turned on, and the officers who responded already knew where it was located. They didn't give much more info than that, so you've got to listen closely.

It was great seeing everyone out at the Fall Ham Radio Picnic last Sunday at Reid Park. Everyone had a great time. There was great food, drink and of course, great people.

Angie & I would also like to thank the kids for coming. It's very important to Angie & I that the kids always feel welcome to these events.

The photos are available including the group photo at www.tucsonhampicnic.com . Any photo can be downloaded since we are now using Google's photo server.

The next picnic is already slated for April 10th, 2010 and details of it are already in place. It's never to early to mark your calander now. It will be held at Christopher Columbus Park and the Ramada (#4) is the same one we always use which is right next to the play ground.

Thanks to ALL who attended this excellent Ham Radio event and see you in April.

The "Bait Car" TV program on Tru TV shows everything from video taken inside the UC car, radio communications to whoever shuts down the bait car, footage from hidden cameras inside the bait car, it shows placing at least 2 different cars and the type of cars that are used. With all that information publicly known and the same cars used over again, bad guys are still stealing them. I guess bad guys don't watch tv very much.

From: Mike Lanning
Topic: 16422 Message: 16422

This evening listening to Mesa FD is the first time I have heard the Deputy Chief be given a unit number on dispatch

When they dispatched a structure fire in Mesa they dispatched "East Deputy 200"

tonight is first time ive heard them use a number

Maybe David Greenberg can help with this??!!

Thanks
Mike
